

SKANSKA

Annual Report 2016

We build for a better society.

Synergies from Skanska's business streams

Operational and financial synergies are among the benefits achieved through the collaboration between business streams and Business Units from different home markets.

SEK 30.0 bn

of Skanska's total order backlog were contracts involving more than one Business Unit as of December 31, 2016.

SEK 17.6 bn

in Construction revenue were from internal Project Development contracts in 2016.

Karolinska University Hospital's new facility in Solna, Sweden, accepted its first patients at the end of 2016. The project demonstrates the synergies within the Skanska Group. Structured as a public-private partnership (PPP), Skanska Infrastructure Development together with a joint venture partner is responsible for developing, financing, building and maintaining the hospital. The Construction units Skanska Sweden and Skanska UK are working together on the construction contract, which amounts to SEK 14.5 billion.

Providing New York with a world-class airport

LaGuardia Airport Central Terminal, New York City, USA
Infrastructure Development and Construction

Skanska, as a member of LaGuardia Gateway Partners, is redeveloping LaGuardia Airport's Central Terminal through a public-private partnership (PPP). This involves Skanska's largest-ever contract: a 70 percent share of the design-build agreement totaling about SEK 33 billion. This assignment also involves a Skanska equity investment of about SEK 580 M, reflecting a 33.3 percent shareholding in LaGuardia Gateway Partners.

Harnessing the collective power of three Skanska Business Units – Skanska Infrastructure Development, Skanska USA Building and Skanska USA Civil – the project is a top example of what the Group's synergies make possible, including creating significant value for the Group.

LaGuardia's transformation also represents much more.

The Central Terminal is the largest U.S. PPP and the first U.S. airline terminal to be delivered by PPP, in which a private sector team handles finance, design, construction and long-term operation and maintenance. With its successful financial close in 2016, the Central Terminal is seen as a trendsetter for more and bigger PPPs in the U.S.

"We have received lots of calls from our airport colleagues from around the country," says Patrick Foye, Executive Director of the Port Authority of New York and New Jersey, the owner of LaGuardia Airport. "I am optimistic that LaGuardia will result in a significant increase in the number of PPP transactions."

He adds: "We're very excited about the opportunity for more PPPs in our portfolio, whether with airports, rail tunnels or at our ports. It's a good thing for the public to have these additional options available."

This document is in all respects a translation of the Swedish original Annual Report. In the event of any differences between this translation and the Swedish original, the latter shall prevail.

Reporting of revenue and earnings in the first part of the Annual Report (pages 1–48) complies with the segment reporting method. The statements of financial position and cash flow are presented in compliance with IFRS in all parts of the Annual Report.

Skanska AB, Swedish corporate identity number 556000-4615.

Skanska as an investment

Skanska is one of the world's leading construction and project development companies, focused on selected home markets in the Nordics, other European countries and North America.

Supported by global trends in urbanization and demographics, and by being at the forefront of sustainability, Skanska offers competitive solutions for both simple and the most complex assignments. Driven by its values, the Group helps create sustainable futures for customers and communities.

In 2016, the Group's 41,000 employees delivered strong results while building for a better society.

Strong global trends

Demographic changes and continued urbanization lead to an increased demand for infrastructure, hospitals, schools, homes, offices and more. Demand for Skanska's expertise in green construction is significant in a world that is becoming increasingly aware of the human impact on the planet.

Leading market position

Skanska holds a leading market position in each of its home markets. By leveraging the operational synergies across the business streams and home markets, its competitive advantage is strengthened.

Diversification

Skanska's risk diversification across four business streams with operations in several geographic markets and segments helps ensure a balanced and diversified risk profile.

Strong cash flow

Through an attractive business model, Skanska generates a strong cash flow which, combined with net cash, puts the Group in a stable financial position.

Financial synergies

The strong cash flow from Construction is invested in the Group's own high-return development projects. The investments in Project Development will continue to increase.

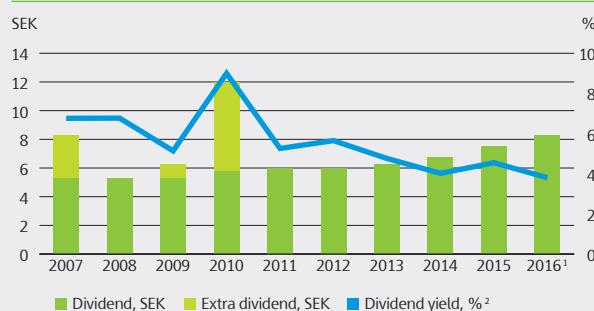

Attractive total shareholder return

Skanska has a competitive total shareholder return with more than ten years of increased or maintained ordinary dividend, while maintaining a continued high level of investments in Project Development.

¹ Before Central and eliminations.

Construction

- Order bookings amounted to SEK 170.2 billion. The major contracts included:
 - LaGuardia Airport Central Terminal in New York, USA
 - European Spallation Source in Lund, Sweden
- All-time high order backlog, SEK 196.3 billion.
- The operating margin in the stream was 2.6 percent:
 - Strong performance in Sweden and USA Building
 - Weak performance in USA Civil and Poland
 - Stable in all other units

Residential Development

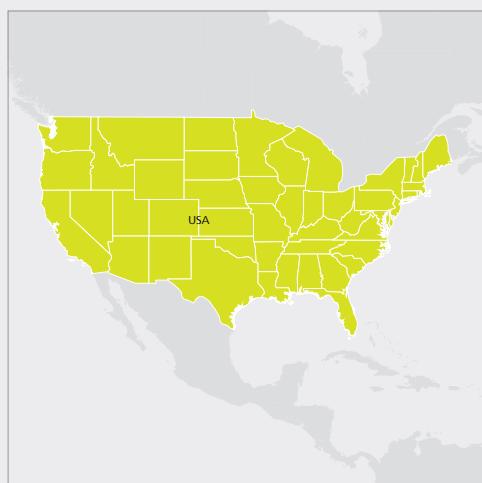

- Continued improved performance with an all-time high in operating income, SEK 1,605 M, and clearly met return targets.
- The number of homes sold and started totaled 4,603 and 4,848, respectively.
- BoKlok, the affordable homes business, continued to deliver great returns.

Commercial Property Development

- A new all-time high in divestment gains at SEK 3.1 billion.
- The number of ongoing property projects was 47 at the end of the year, corresponding to an investment value upon completion of SEK 20.3 billion.
- 26 projects started across all geographies: the U.S., Central Europe and Nordics.

Infrastructure Development

- Operating income totaled SEK 1.8 billion.
- The investment in the M25 motorway was divested for SEK 3.1 billion.
- Financial close reached on the LaGuardia Airport project in New York, USA.
- Net present value of projects is SEK 4.3 billion.

Skanska's home markets

Skanska has operations in eleven countries in Construction, Residential Development, Commercial Property Development and Infrastructure Development. The Business Units in these business streams work together in various ways to create both operational and financial synergies, leading to increased value creation.

Comments by the President and CEO

Skanska delivered very strong earnings growth and maintained a solid financial position in 2016. Our Project Development business streams were the engines of our performance. In 2017, we will continue to deliver on the Profit with Purpose Business Plan, backed by favorable outlooks in our home markets.

In 2016, Skanska began the journey of our Profit with Purpose Business Plan, which will guide us until 2020. Under this plan, our aim is to deliver an industry-leading total shareholder return while achieving our purpose: building for a better society. It's about ensuring that our business prospers by contributing to society and helping customers be more successful. It's about doing more of what Skanska has long done, and doing it better.

With both Profit and Purpose, Skanska demonstrated strong performance in 2016.

Earnings per share increased by 33 percent to SEK 15.89. Our performance was driven by all-time high earnings in the Residential Development and Commercial Property Development business streams, together with divestment of an Infrastructure Development project. Our Construction stream did not meet its operating margin target. Still, we ended the year with a robust financial position. Based on these results, the Board of Directors is proposing to increase the dividend to SEK 8.25 (7.50) per share.

The Skanska share delivered a total shareholder return of 36.4 percent in 2016, compared with 9.6 percent for the Swedish stock market. Furthermore, in December 2016 Skanska's share reached a new high point of SEK 218.70.

Leveraging synergies to improve competitiveness

Skanska's success is increasingly a result of the operational and financial synergies that come from different parts of our business working together. We are very focused on boosting these collaborations.

Operational synergies include using local, specialized expertise on a global scale to strengthen customer offerings, expand our opportunities and improve how projects are delivered. For example, for the recent pursuit of a major hospital in Norway, we leveraged expertise from the UK, Sweden and the U.S. – the bid was successful. Also, the successful expansion of Commercial Property Development to the U.S. was built on knowledge shared from that stream's operations in the Nordics and Europe.

Financial synergies result from harnessing the free working capital from Construction to invest in development projects – this cycle is the heart of our business model. Skanska benefits in two key ways: we generate our own construction contracts, and we achieve significant returns from the money we invest in Project Development.

Project Development's major contributions

Project Development's significance has increased within Skanska, which is an aspiration of the Business Plan. In 2016, the three Project Development business streams – Residential Development, Commercial Property Development and Infrastructure Development – produced 62 percent of Skanska's operating income.

Other Project Development highlights from last year include:

- Residential Development surpassed our 10 percent target for both return on capital employed and operating margin. BoKlok, our affordable homes business, did especially well.
- 47 Commercial Property Development projects were underway, and we made one of our most successful divestments ever: the sale of the 101 Seaport office building in Boston for about SEK 3.8 billion.
- Financial close was reached for the redevelopment of LaGuardia Airport's Central Terminal in New York, our third U.S. public-private partnership (PPP). This project involves our largest-ever construction contract – worth about SEK 23 billion – and it draws upon Group-wide expertise.
- Divestment of our share in the M25 motorway PPP in London for about SEK 3.1 billion.

We see great demand for all three Project Development streams. In 2017, we plan to start even more development projects and further grow this part of our business.

Construction backlog at all-time high

Most of our Construction Business Units were stable and profitable in 2016. Performance was particularly strong with Skanska Sweden, Skanska Finland and Skanska USA Building. Furthermore, we ended the year with a construction backlog of SEK 196.3 billion – our highest ever.

Still, we are not satisfied, as we did not achieve the 3.5 percent target for Construction operating margin. Both Skanska Poland and Skanska USA Civil had weak performances, and they are taking steps to improve. Reaching or exceeding our Construction operating margin target is a top priority that we are working hard to achieve.

"Skanska's success is increasingly a result of the operational and financial synergies that come from different parts of our business working together."

To increase margins in all Construction Business Units, one key way is enhancing how we manage risks and opportunities. We have added an additional layer of scrutiny within the Business Units to bolster our tender review process, implemented a system to better monitor large project performance and are continuously improving our financial steering of projects. A stricter bid strategy is another important action: in order to bid we have to identify the right team to execute the project. Furthermore, we are strengthening our people with the right training for their area of responsibility.

Values provide business benefits

We want our strong Skanska values to guide everything we do. I am convinced that our values make us more profitable and successful, and they are essential to contributing to society. Increasingly, employees want to work for companies with clear values. And I am seeing more customers and partners choose Skanska in part because of our values.

For instance, in Östersund in northern Sweden, Skanska secured the Remonthagen housing project because of our skills and desire for the really innovative part of this assignment: joining a pilot effort with the local public housing company to provide construction skills and language training to newly arrived refugees. And in Poland, our Osiedle Mickiewicza Residential Development project is the first housing development in that country certified by the BREEAM environmental system – more than 40 percent of home-buyers said that green label had an important influence on their decision.

Through what we do and how we work, we help ensure sustainable futures for our people, customers and communities. We focus on the sustainability areas in which we can make the most significant positive contributions: Safety, Ethics, Green, Corporate Community Investment, and Diversity and Inclusion. All of these areas relate to our core business and expertise, and are interconnected. These areas support the sustainable development goals defined by the United Nations Global Compact, which Skanska has actively supported for the last 16 years. Safety is an area in which we particularly need to improve, as four people lost their lives on Skanska projects in 2016.

The need for Skanska's contributions is becoming greater. Society faces intensifying challenges – and opportunities – from a changing climate, increasing urbanization, integrating migrants and more.

Favorable outlooks

We view 2017 with confidence, backed by positive outlooks for all our markets and business streams.

But we also know that 2017 will likely be a year of great change. Brexit in the UK and Donald Trump as U.S. President are expected to lead to big shifts for those countries – two of Skanska's top home markets – that impact the rest of the world. For now, those impacts remain unclear, but the UK government and President Trump have both signaled plans to increase infrastructure investment. Whatever changes may occur, we are confident in our ability to adapt in line with our values. We have successfully adapted many times in our 130-year history.

Focused on delivering our strategy

Based on Skanska's 2016 performance, we are on track to deliver the second year of the Profit with Purpose Business Plan, while positioning our business for success in the years to come.

Continued achievement with the Business Plan depends on having and developing great people; finding new and better ways to contribute to the success of customers; and achieving excellence in our operations and support functions. We are committed to strengthening the performance of the Construction units while maximizing the ongoing success of Project Development.

With ongoing support by our strong values and committed people, we will create further benefits for our shareholders, customers and communities. I am proud to be part of this journey, and am optimistic for what is ahead.

Stockholm, February 2017

Johan Karlström
President and CEO

The workplace of the future, available now

Corso Court, Prague, Czech Republic
Commercial Property Development and Construction

Integration between Commercial Property Development and Construction enables Skanska to better serve future tenants of properties developed by the Group. With Skanska as both developer and contractor, tenants can be more confident of completion dates and that the delivery process will be smooth.

For Skanska, these synergies produce efficiencies that aid in project profitability and ensure price competitiveness.

A great example of this is Corso Court, a 17,000 sq m (183,000 sq ft) LEED Platinum-certified building.

Skanska Czech Republic and Slovakia was involved with Skanska Commercial Development Europe from this project's earliest stages. This enabled quick feedback during conceptual design, and flexibility in addressing changes during construction. Since there is a Construction team in Prague dedicated to Commercial Property Development projects, relationships and best practices flow from one project to the next. As a further level of integration, 62 percent of the construction value was performed by Skanska specialist companies as subcontractors. All these things helped produce a final cost that was well below the target cost.

Corso Court is one in a series of Commercial Property Development projects in Prague to be fully leased and divested before construction completion, demonstrating continued strong interest in Skanska properties.

Skanska's values

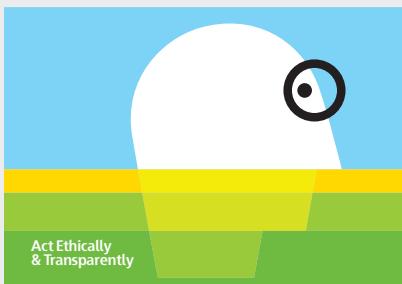

In an ever-changing world, Skanska's culture and identity remain anchored to strong values. The Group constantly drives the need for every employee to live Skanska's values in all they do. Values are fundamental to the Group's success.

Care for Life

Care for Life is how Skanska is accountable to future generations through safe and environmentally responsible actions. One way the Group is improving at this is through increased collaboration between Business Units.

For example, in Central Europe the four Business Units are developing common health and safety standards, and have established a structure to share best practices and coordinate safety activities. As part of this, the Project Development units act as demanding clients to the Construction units, further helping to eliminate injuries and support health and well-being.

Act Ethically and Transparently

Skanska does business with a high degree of integrity and transparency. To support this, in 2016 the Group launched a new Code of Conduct and its first Supplier Code of Conduct. Together, these set the ethical direction for employees and external parties.

The new Code of Conduct has many examples, providing employees with hands-on guidance for living Skanska's values every day.

It can be viewed at codeofconduct.skanska.com.

The Supplier Code states the behaviors Skanska demands from its supply chain. Skanska only works with customers that do not require compromising the Group's high standards.

Be Better – Together

Skanska strives to be better in all it does, and important to this are collaborations both inside and outside the Group. An example is the Global Healthcare Center of Excellence, which shares healthcare facility solutions and resources across Business Units.

When Skanska Norway and Skanska UK were recently pursuing a large hospital in Norway, the Center of Excellence linked them to experts in Skanska Sweden and Skanska USA Building – this was key to the bid being successful.

This Center of Excellence enables Skanska to be highly strategic and better understand trends in healthcare, a top Skanska sector.

Commit to Customers

Skanska helps customers be successful in their business. In the UK, for Anglian Water to successfully deliver a large infrastructure program it wanted more than a collection of designers and contractors – it wanted a partnership.

It found that with the @one Alliance, a collaborative organization of consultants and contractors, including Skanska. The Alliance will deliver about 800 projects by 2020 using multidisciplinary teams focused on mutual trust and respect. By understanding Anglian Water's internal customers, the Alliance added an "after care" role to help teams start operating newly completed projects.

Business model

Projects are the core of Skanska's operations. Value is generated through the thousands of projects the Group executes each year. The goal is for every project to be profitable while being executed in line with Skanska's ambition to be an industry leader in sustainability.

The Business Units within the four business streams collaborate in various ways, creating operational and financial synergies that generate increased value. Going forward, even more will be invested in releasing these synergies.

Operational synergies

Operational synergies are primarily generated by using the local, specialized expertise found in the various Business Units on a global scale. Units from different business streams often collaborate on projects, which reinforces their customer focus and creates the necessary conditions for sharing best practices, while ensuring efficient utilization of the Group's collective expertise and financial resources. Units in the same business stream also collaborate to make better use

of expertise or size. Business Units establish geographical clusters to share resources and expertise, with shared activities in procurement and production also boosting efficiency.

Financial synergies

Skanska's Construction business stream does not tie up capital but instead operates with free working capital. The free working capital combined with the profits generated by the Group, as well as its ability to leverage up its balance sheet to borrow money, enables the financing of investments in Project Development, which generate an excellent return on invested capital. These investments also create new contracts for the Construction stream that generate a profit. This is illustrated in the image below.

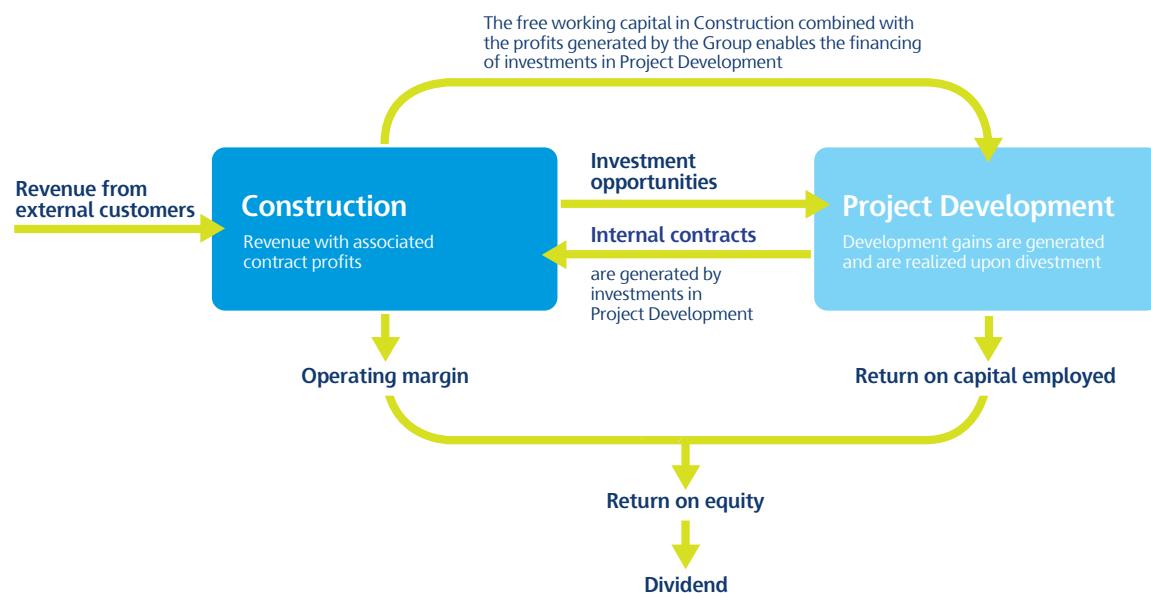

Size provides competitive advantages

By being a market leader, Skanska is well positioned to meet the highest expectations of customers.

The Group's size and financial strength give Skanska an advantage in the most complex assignments, where collective experience and know-how are used to meet customers needs.

The Group's operations are based on local Business Units with good knowledge of their respective markets, customers and suppliers. These local units are backed by Skanska's brand and financial strength as well as Group-wide expertise and values. Consequently, Skanska is both a local company with global strength and an international construction and project development business with a strong local presence.

Skanska's business model

Business plan 2016–2020 – Profit with Purpose

The current business plan outlines the strategic direction that will take Skanska to the next level of performance. The aim is to increase shareholder value while working toward a more sustainable future for employees, customers and communities. This is how Skanska creates Profit with Purpose.

Profit with Purpose

Generating value for shareholders

Generating value and delivering an industry-leading total return for shareholders is Skanska's aim. A strong focus on profitability is combined with controlled growth. This results in a stable, long-term earnings trend and provides the cash flow necessary for an attractive dividend. To achieve this Skanska is focusing on Great People, Market Making and Operational Excellence. This is described in more detail on pages 12–14.

Profit with Purpose

Customers, investors and potential employees all prefer companies that are working in responsible ways. Genuine market leaders create shareholder value that contributes to general improvements in society. Skanska

is built on strong values and is very committed to helping society prosper while also running a profitable business.

Skanska's purpose is to build for a better society.

It is not about choosing profit or purpose; it is about doing both at the same time. Profit is needed to deliver Skanska's Purpose, and a strong purpose – in other words, building for a better society together with customers – contributes to Skanska's profit.

Delivering purpose

Skanska provides innovative and sustainable solutions to create a sustainable future for its people, customers and communities. This is reinforced by a commitment to Safety, Ethics, Green, Corporate Community Investment as well as Diversity and Inclusion. All this is linked to the core business and employees' key competencies. All of Skanska's home markets provide the right conditions for delivering the sustainable solutions that both customers and communities need.

The way Skanska operates also contributes to sustainable development: constantly finding safer and greener ways to work, working ethically, embracing diversity and engaging in communities. Skanska also encourages both the industry and society in general to act sustainably. The company's ambition is to be an industry leader and an authority on sustainability.

Aspirations 2020

- Industry-leading total shareholder return
- Balanced value creation between Construction and Project Development
- Recognized as a preferred partner when it comes to creating solutions that meet customers' needs
- Living our values and recognized as a value-driven company building for a better society
- An injury-free and ethical environment
- The most attractive employer in our industry
- Cooperation within and between units and business streams as One Skanska in high-performing teams
- Improved operational efficiency

Focus areas within Sustainability

- Safety
- Ethics
- Green
- Corporate Community Investment
- Diversity and Inclusion

Financial targets 2016–2020

Skanska's business plan for the period 2016–2020 sets financial targets that best reflect the profitability of operations and show the Group's financial capacity for investment and growth.

Return on equity and on capital employed are measures of how well shareholder and lender capital are being used (capital efficiency), and are considered fair measurements for the Group and the Project Development business streams, respectively. The operating margin is an expression of the profitability and efficiency within Construction. The margin is dependent on the mix of contract types and the different geographical markets.

Outcome 2016

In 2016, Skanska reached its return targets, and ended the year with a strong financial position. The Group's financial strength enables the continuation of increased investments in Project Development. As the value creation from Project Development increases and starts to balance the value created in Construction, the outcome of the return targets for Project Development will maintain at stable levels.

The operating margin in the Construction stream was below the target, mainly due to the operating margin being lower in USA Civil and negative in Poland.

Financial targets 2016–2020

Group

Return on equity

$\geq 18\%$

Financial strength

Net operating financial assets/liabilities

can be
negative

if opportunities arise

Construction

Operating margin

$\geq 3.5\%$

Helping prevent a 700 km detour

Sørkjosen Tunnel, Sørkjosen, Norway | Construction

At the top of Norway, deep inside the Arctic Circle, is the village of Sørkjosen. Rocky peaks studded with bare white birch trees frame the glistening waters of a fjord, and along its shores runs the E6 motorway.

Here, Skanska Norway is providing society with a solution to an important problem: at Sørkjosen, the E6 crosses up and down the mountain, and snow and ice can cause trucks hauling fish from the Barents and Norwegian seas to slide – sometimes blocking the critical route and causing a 700 km detour that stretches into Finland. The tunnel will provide a safer and more direct route, which residents have awaited for years.

Drilling and blasting common to Norway have created the new 4.5 km tunnel. Guided by exacting survey work, tunneling crews working from both ends met in the middle with precision: a variance of only 1 cm in height and 2 cm sideways, both far within normal tolerances.

"We never miss," says Skanska Project Manager Tor Gildestad.

Successful tunneling also depends on working safely, and on thoroughly understanding the local rock. For this project, Skanska Norway – rather than the Government – employed the geologists who inspected the rock after each blast. This special collaboration was important to expediting the tunneling process.

Great People

Success in Skanska's project-based business depends on having people with the right skills and commitment, and who share Skanska's values. Recruiting top people and developing them are key parts of this focus area, as is becoming more diverse and inclusive.

Skanska aims to be the most attractive employer in its industry. The Group provides a culture based on transparency, values and high performance, with employees working together on teams to build for a better society. Skanska provides employees with many opportunities to learn and grow: when an employee grows, Skanska as a company develops.

Skanska wants employees to continuously develop and contribute to the company. Seop, the Skanska employee ownership program, helps build pride of ownership among employees and an understanding of how to create value for shareholders. Seop

has around 10,500 participants who invested a total of about SEK 300 million in 2016. If counted as one group, they are now the third-largest Skanska shareholder.

Sharing knowledge and building broader experience

Another important aspect of ensuring the Group's success is providing employees with a broader range of experiences. Employees are encouraged to work in different Business Units and geographies: this helps share knowledge and improve collaboration. Skanska's internal recruitment policy was updated in 2016 to better support this.

Improving through diversity and inclusion

The Group is focused on achieving a more diverse workforce: attracting, recruiting and retaining people from a larger pool, thereby mirroring the diversity in society. This will help Skanska build relationships with an increasingly diverse customer base, and boost innovation by leveraging the unique experiences and perspectives of all employees. The Group also prioritizes achieving a more inclusive culture, in which every employee can reach their full potential.

Paul Wright's tenure as Operations Director in the UK includes building "mega" public-private partnership (PPP) hospitals with up to 2,000 people on-site. For the last five years, Paul has been working in Sweden, leading the design and construction of New Karolinska Solna. It is ideal for him, being another large PPP healthcare project.

This transfer from Skanska UK to a Skanska Sweden-led project has been beneficial to the Group and to Paul personally. It enabled the project team to gain from Paul's deep knowledge and experience as a 30-plus year Skanska employee. And it provided Paul the opportunity to expand his abilities working in another country and leading a construction site with more than 32 nationalities in the wider team.

Market Making

By understanding the needs of customers, Skanska can together with them provide the best solutions. This requires Skanska to become more structured and proactive in customer relationships, and to have a more customer-focused mindset. The aim is for more customers to recommend and choose Skanska as their partner.

Skanska seeks to understand the agendas, needs and challenges of customers, and what success means to them. Only then can Skanska deliver the innovative solutions that customers find attractive, setting the Group apart in a competitive marketplace. Listening to the customer, taking the initiative and leveraging Skanska's broad capabilities generates new business opportunities and long-term partnerships.

Increasingly, Skanska's values and how they are lived are appreciated by customers. Values help differentiate Skanska, particu-

larly on the more desirable assignments in which price is not the only factor. Customers want to work with partners they can trust, and that also act responsibly.

Early contractor involvement

Demand is increasing among Skanska's customers for help with designing functional and cost-saving solutions. Joining a project at an early stage aids Skanska in helping customers be more successful in their core businesses.

Long-term perspective

Deeper collaboration with a clear focus on sustainability is becoming increasingly important to customers. By taking a longer and broader perspective that goes beyond the Project Development and Construction commitments, Skanska and its customers can build for a better society, improving the lives of many people.

In four main regions of Sweden, Skanska and its partners are creating dialogues with public officials around what those growing areas could be like decades from now. These conversations are intended to look past immediate challenges and think big about needs and solutions for housing, transportation, workforce integration, energy and more.

These visions help Skanska be more of a partner to municipalities, a resource to help them in their planning. For example, Skanska was invited by the Swedish municipality of Botkyrka to present ideas for developing a large plot of land. In response, Skanska created a vision for the municipality's southern entrance. That led to a joint venture with Botkyrka to develop the land; other municipalities are interested in similar approaches.

Operational Excellence

Improved delivery of projects for customers and stronger results for Skanska both depend on the Group achieving excellence in its operations. This is true in all parts of Construction and Project Development, from risk assessment and design to execution and divestment. Increased collaboration, training and digitalization are priorities.

To leverage the breadth and depth of Skanska's operations to improve operational excellence, knowledge sharing networks have been established within and across business streams. Within Construction, a network of senior managers now shares best practices and coordinates the efficiency improvement programs underway in many Construction Business Units.

Skanska is also driving increased collaboration externally with customers and other project partners. Early contractor involvement remains a focus as this enables project teams to work with customers to optimize

project solutions at an early stage, enabling the most efficient delivery and improved safety.

Becoming a digital company

Skanska is embracing the digital world. Building information modeling (BIM), mobile productivity tools, drones, and virtual and augmented reality are becoming increasingly common across Business Units. These technologies enable better service to customers, while also improving the certainty and efficiency of project delivery. Smarter design and industrialized

production are also important to enhancing productivity.

Value from data and people

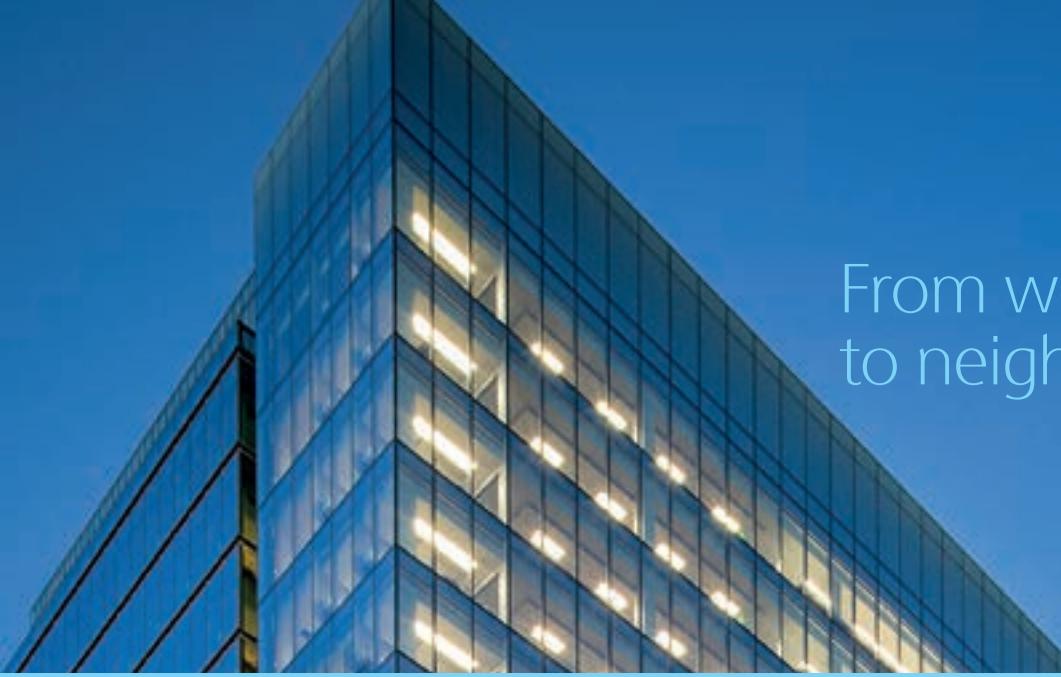

Additionally, Skanska sees increasing value in the vast amounts of data collected during design and construction. This data can improve the Group's own efficiency, and aid customers in managing their assets once construction is complete. Underlying all Operational Excellence efforts is ensuring that employees have the right skills for their areas of responsibility.

A growing number of Skanska Norway projects are implementing a framework – adopted from Stanford University in the U.S. – that improves productivity across project planning, design and construction.

This Virtual Design and Construction (VDC) approach aligns modern technology with high-performance lean process management. BIM is the collaboration platform, collaborative planning occurs in all project phases, and interactive weekly work sessions bring together key decision makers from the customer, Skanska, design team and other partners to increase the speed of decision making.

A lean mindset empowers project teams, helping members be more effective and aiding in reducing wasteful project activities, such as rework.

From worn parking lot to neighborhood icon

101 Seaport, Boston, USA | Commercial Property Development and Construction

It was an incredible challenge: transform a concept of a building into the new Boston headquarters for PwC and its 3,000-plus local employees, all within 26 months.

Skanska committed to PwC, the global accounting and consulting firm, that it would deliver their premises in 101 Seaport on that ultrafast timetable. PwC would occupy almost 80 percent of the nearly 41,000 sq m, or 441,000 sq ft. Through the Group's integrated abilities to self-finance, develop and construct, Skanska very effectively managed risks to advance the schedule. The LEED Platinum headquarters was completed as promised.

"No one else in the market could have done what we did," says Charley Leatherbee, Executive Vice President in Skanska Commercial Property Development USA.

Union Investment Real Estate GMBH bought 101 Seaport for about SEK 3.8 billion, one of the highest prices ever paid for a Boston office building.

Risk and opportunity management

At Group, Business Unit and operational levels, Skanska has procedures and tools to enable risks to be identified, avoided, mitigated and managed. These also enable opportunities – ranging from project selection to divestment – to be maximized and realized. The breadth of Skanska's Project Development and Construction operations benefits the Group's resilience to risks and ability to capture opportunities.

Continued advances with risk and opportunity management

Journey of continuous improvement

Skanska's first formal risk management tool applied throughout the Group was the Operational Risk Assessment, introduced in 1999. Since then, a suite of procedures and tools to assess and manage risk and opportunity during the project lifecycle has been developed and refined. Since 2008, scrutiny and approval of large and complex projects at the Group level have been managed by the Skanska Risk Team – a staff function providing scrutiny and analysis – and the Senior Executive Team Tender Board, a decision making body. The largest projects go to the Project Review Committee of the Board of Directors for final approval.

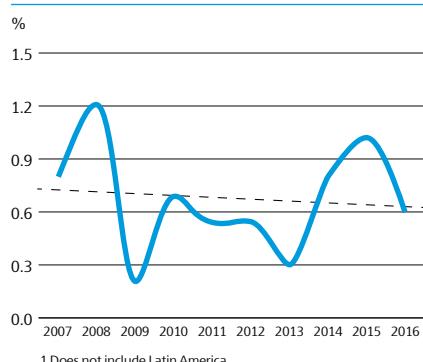

During the five-year business plan to 2015, risk and opportunity management were focus areas for management at all levels. A key development during this period was the expansion of the Skanska Risk Team's role to include scrutiny of Residential Development and Commercial Property Development projects.

Improved risk management at the operational level

With the introduction of the 2020 Profit with Purpose Business Plan, risk management continues to be an important focus area within Operational Excellence. Building upon the success of the Skanska Risk Team and the Senior Executive Team Tender Board, all Business Units have established their own risk teams and project boards: this is to improve the quality and objectivity of scrutiny at the operational level.

To ensure that risks and opportunities identified during project planning continue to be managed effectively during project execution, an early warning process has been established for larger and more challenging projects within the Construction business stream. Through this, senior management will be alerted if certain events occur or key performance indicators are outside a set tolerance.

Total Construction losses divided by total Construction revenue¹

¹ Does not include Latin America.

Continuous efforts within risk management aim to minimize the number of loss-making projects, which currently are too numerous. However, loss-making projects cannot entirely be avoided due to the scale of the Group's operations.

Skanska's approach

Skanska has embedded proactive and structured risk and opportunity management at every level of its organization. Here are major aspects of this:

Enterprise level

Established by the Board of Directors, Skanska's Enterprise Risk Management Policy sets out the structure and responsibilities for risk management across the Group. Enterprise risks are categorized as strategic, operational, financial or regulatory, and for each category the policy details the primary policies, procedures, regulations and other controlling documents governing the management of risk.

Skanska conducts an annual enterprise risk survey, involving over 200 managers in the Group. This generates a ranking of enterprise risks: for each of the top risks, the appropriateness and effectiveness of management and mitigation measures are assessed and corrected, as required.

Skanska's wide diversity of projects across geographies and business streams enables the Group to be better informed and better prepared about risks and opportunities.

Operational level

Risk management at the operational level is governed by the Operational Risk System. This system's philosophy is that the process of managing risks is an integral line management responsibility. At all operational levels, every Skanska employee should be a manager of risk. This system details how Business Units should organize for risk management, and it acts as a roadmap to the suite of risk and opportunity management procedures, guidelines and templates.

The Skanska Tender Approval Procedure and Investment Approval Procedure control

Enterprise level

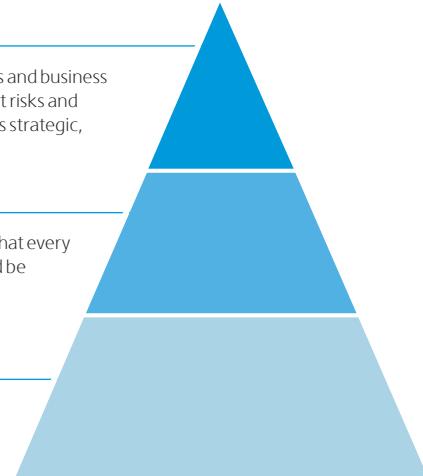

Skanska's diversity of projects across geographies and business streams helps the Group be better prepared about risks and opportunities. Risks at this level are categorized as strategic, operational, financial and regulatory.

Operational level

Fundamental to the process of managing risks is that every Skanska employee at all operational levels should be a manager of risks and opportunities.

Project Level

Excellent management at the project level is the most important element in Skanska's ability to control risks and maximize opportunities.

the level of authorization required for Construction and Project Development projects. These procedures also guide project teams through a structured presentation of risks and opportunities, facilitating scrutiny and approval at the required level.

Each Construction Business Unit has a heat map that records the competency of the Unit to execute projects; this is expressed in terms of scope, size, geography and contract model. Projects outside a Business Unit's core competency are subject to increased scrutiny and higher level approval.

Project level

Skanska's business is effectively an aggregation of the Group's projects. Excellent management at the project level is the single most important element in the ability to control risks and maximize opportunities. Operational Excellence at the project level depends on the right people being properly equipped, trained and supported to bid, negotiate and execute the work. Business Units and support units work together

to ensure that project teams are selected, trained and supported so that they can deliver Profit with Purpose every time.

Benefiting from synergies

An aspiration of the Profit with Purpose Business Plan is to have a business that creates balanced value between Construction and Project Development. Project Development assignments involve Construction Business Units, creating synergies that provide many benefits with risk and opportunity management: enhanced competitiveness; better ability to control risks and maximize opportunities; and increased chances to drive sustainability and innovation. Overall, profitability and consistency are increased. These benefits are further enhanced when different Construction Business Units are involved, such as building and civil.

Many of these benefits also occur when different Construction units collaborate on assignments for external clients.

Skanska's main risks

Risk management is key to Operational Excellence. Skanska annually surveys more than 200 top managers to understand the Group's main risks. For each main risk, comprehensive management and mitigation measures are implemented and regularly updated.

Ethical breach

A breach of the required and expected standards of business ethics has consistently been assessed as a top risk facing Skanska. A severe breach could inflict long-term damage on Skanska's reputation and ability to participate in home markets, and it could lead to financial penalties and other sanctions.

Skanska has proactively invested in strengthening its ethical organization, culture and compliance processes. In 2016, a new Code of Conduct, the Group's first Supplier Code of Conduct and a framework for implementing and supporting both were introduced. The Code is built on the value Act Ethically and Transparently.

Also, Skanska has introduced Value Moments, structured time outs to have discussions around values within teams and workgroups; this strengthens Skanska's ethical culture.

Lack or loss of key employees

Construction and development are most of all people businesses. New project opportunities will not be pursued unless employees with the right competencies are available. Skanska needs to attract, develop and retain a skilled, diverse and committed workforce, in competition with many other organizations.

Skanska focuses on developing excellent leaders and providing an inclusive workplace in which people can flourish and everyone can contribute. Skanska has a structured process of evaluating and reviewing each employee's performance and potential. The Group offers many career development opportunities.

An important tool in recruitment and retention is Seop, the Skanska employee ownership program that is open to all permanent employees.

Project or systemic losses

Not every project or investment goes to plan: unforeseen events, delays, extreme weather, failure of suppliers, unachieved production improvements, estimating mistakes, or any number of other circumstances can cause a project to turn into a financial loss maker. In an isolated project, the issues can generally be addressed quickly and every effort is made to turn performance around; given the size and diversity of Skanska's business, the damage is limited.

It would be much more damaging if there are organization-wide problems in the estimating or execution organization of a large Business Unit; such issues could take years to work through. Skanska has several layers of defense to protect against one-off and organization-wide losses. This includes the Group's scrutiny and approval procedures, follow-up, review and reporting, plus the early warning system for all construction projects subject to Senior Executive Team Tender Board approval. This system tracks a set of key performance indicators custom to each project, and alerts senior management according to set protocols should any of those metrics go out of tolerance.

Macro financial instability

Macro-economic risks cannot be avoided, so Skanska focuses on mitigating their effects and ensuring its business is strong enough to weather economic downturns. Real-time management of financial exposure in terms of cashflow, committed investments and capital employed are key to this. Skanska Financial Services plays a lead role in managing the Group's exposure; supporting Business Units; and looking ahead at markets, economic indicators and political factors to provide early signals of coming changes that might affect Skanska and its partners. The diversity of Skanska's operations in terms of geography, sector, business model, customer type, and business cycles together provides significant built-in resilience.

Accident with multiple people affected

Skanska's Care for Life value directs the Group to work safely or not at all. That drives Skanska to never be satisfied or complacent with safety, health and well-being. Skanska treats safety as an industry-wide issue: only by working in partnership with all stakeholders, including competitors, can the construction industry's culture be changed to deliver Skanska's goal of eliminating injuries and ill health.

Skanska continually works to improve its culture of safety, health and well-being, and regularly develops and enhances systems and processes. The Group strives to learn from others and to share what it has learned.

Reducing travel times by 30 minutes a day

Elizabeth River Tunnels, Norfolk, USA Infrastructure Development and Construction

The centerpiece of the Elizabeth River Tunnels project – the new Midtown Tunnel – opened to traffic in 2016, six months ahead of schedule. This meant drivers benefited even sooner from safer and more reliable commutes, and savings of about 30 minutes daily for the average round-trip user. How this public-private partnership (PPP) project's many significant risks were managed was key to making that possible.

An important first step was learning from other parts of Skanska. Colleagues from Skanska Infrastructure Development, Skanska USA Civil and our partners visited the Bjørvika Tunnel, which Skanska Norway was then building with the same innovative approach planned for the Midtown Tunnel. Then during construction, evaluations were done every month on the hundreds of risks being tracked. Expert input also came from across the Group.

The PPP model enabled close collaboration between the Virginia Department of Transportation and the Skanska consortium's developers, designers and builders, and those operating this infrastructure until 2074. Skanska is an equal equity investor and lead of the design-build joint venture. This group focused on creating a tunnel that would be the optimal solution throughout its life.

Focus areas within sustainability

Sustainability is key to delivering on the Profit with Purpose Business Plan. Skanska focuses on sustainability areas directly connected to its business to make the most significant positive contributions to society. Advancing as a leader in sustainability is a business advantage for Skanska as a partner and employer.

Holistic approach to sustainability

Skanska's projects and how they are delivered ensure a sustainable future for communities, customers and employees. The Group focuses on sustainability aspects most relevant to its core Construction and Project Development operations: Safety, Ethics, Green, Corporate Community Investment, and Diversity and Inclusion. Through that strategic approach, Skanska brings the most value to society.

The Group aims to capitalize on the interconnectedness within sustainability. For example, more diverse and inclusive project teams should think more creatively, improving safety and helping provide the best solutions for customers. Ultimately, Skanska aims to be recognized as an industry leader within sustainability

as a whole, extending beyond leadership in individual sustainability areas. The work with sustainability contributes to delivering profit and creating shareholder value.

Leveraging global knowledge

Skanska shares the best solutions and knowledge across the Group, and cross pollinates solutions between Construction and Project Development business streams to further improve performance. Also, Skanska seeks to involve customers and partners with sustainability, learning and sharing for mutual benefits.

Further information on sustainability can be found on page 65–69 and on www.group.skanska.com.

Safety

Skanska's Care for Life value commits the Group to eliminate injuries and long-term work-related damage to health, both mental and physical. As a way of living this value, Skanska is developing a Health and Well-being Strategy. This will provide improved direction on reducing long-term health hazards – including noise, dust and poor ergonomics – and will offer employees guidance and information to enable better lifestyle choices with diet, alcohol, smoking and more. This strategy will help people remain healthy throughout their entire lives.

Skanska's upcoming Health and Well-being Strategy will reduce long-term harm to thousands of workers. It builds upon local Business Unit-level initiatives.

Ethics

Skanska provides employees with resources to help them live the Group's values – ensuring that the values are not just mere words. During the year, an easy-to-read Code of Conduct was launched to be a regular guide for employees. Also debuting in 2016 was a Value Moments Library, a collection of short films depicting real situations that challenge any of Skanska's values. The library is a tool to start discussions around values: everyone is encouraged to begin meetings with a "value moment."

To help employees live Skanska's values every day, they are encouraged to start meetings by discussing those values.

Green

Constructing and operating buildings and infrastructure emits much carbon. That challenge provides Skanska with an opportunity to help society, which is why the Group is on a journey to be a low-carbon business. That effort achieved a milestone in 2016 when Skanska was included in CDP's Climate A List, the top ranking in a scoring that recognizes management of climate change risks. Also, Skanska continued advancing the Envision and CEEQUAL systems that rate the environmental and social performance of infrastructure.

Corporate Community Investment

Skanska strategically supports communities through its projects and people, delivering mutual benefits to local societies, customers, employees and the Group. One Corporate Community Investment (CCI) area is strengthening and integrating local workforces, such as providing training and opportunities for refugees, new immigrants and military veterans. Another CCI focus is developing projects in ways that enhance surrounding neighborhoods. These CCI priorities directly relate to Skanska's business, maximizing the Group's impacts.

Diversity and Inclusion

Diversity and Inclusion (D&I) work on the Business Unit level continued with increasing efforts in 2016, producing concrete results. Headcount statistics and employee survey results show a clear positive trend, indicating Skanska is improving with diversity as well as inclusion. D&I has become a way to better connect with customers and suppliers, and to stimulate the creative thinking needed to be most competitive. Efforts continue across the Group to further embed Diversity and Inclusion into key business practices.

Skanska was named to CDP's Climate A List, recognizing the top nine percent of 2,000 companies across industries worldwide in the ranking.

Being a responsible community member is about delivering projects that benefit Skanska's customers and that make a wider contribution to society.

Skanska UK received two prestigious industry honors for Diversity and Inclusion activities and initiatives.

Moving, and healing, New York

World Trade Center Transportation Hub, New York City, USA | Construction

It's a place that exists to serve more than 250,000 people in their daily travels. To be a major destination for shopping and dining. And most importantly, to help New York City heal from the tragedies of September 11, 2001.

The World Trade Center Transportation Hub opened to the public in 2016, and with its soaring Oculus entrance hall it instantly became a new icon. It is the latest milestone in Skanska's long history on the site.

In the 1960s, Skanska installed the foundations and erected the steel for the 110-story Twin Towers. When the complex was rocked by a bomb in 1993, Skanska did the repairs. In the days after the towers fell in 2001, Skanska stabilized the remaining structures, and returned in 2005 to plan and prepare for rebuilding the site.

In 2010, Skanska USA Civil, Skanska USA Building and a partner began building the new Transportation Hub. Bringing together Skanska's expertise in constructing both infrastructure and buildings was key to successfully completing this assignment. Dedication and pride were also critical.

"Every Skanska employee at the World Trade Center site dedicated themselves to rebuilding, restoring and renewing this vital hub," says Skanska Senior Vice President Gary Winsper.

Share data

Skanska's Series B shares are listed on Nasdaq Stockholm, and the market capitalization on December 31, 2016, was SEK 88.0 billion. The last price paid for Skanska Series B shares in 2016 was SEK 215.1, and over the year the share price increased by 30.5 percent.

- Skanska's Series B shares (SKAB) are listed on Nasdaq Stockholm Bloomberg ticker SKAB:SS Reuters quote SKAb.ST
- Skanska has a sponsored American Depository Receipt program (Level I) in the U.S. that is traded under the code SKBSY.
- In December 2016, Skanska's share price reached a new record high of SEK 218.70.

Around 15 analysts follow the company regularly. Under the "Skanska share" tab on Skanska's website for investors is a list of the analysts who follow Skanska, along with their current recommendations.

The stable underlying level of earnings in the Group is an effect of risk diversification across four business streams with operations in several geographical markets

- 92,806 shareholders, the largest of which is Industrivärden.
- Market capitalization of SEK 88.0 billion.
- In 2016, 2.1 million Skanska Series B shares were traded on average every day.
- The Board of Directors proposes a dividend of SEK 8.25, an increase of SEK 0.75.

and segments. This has contributed to Skanska's increased or maintained ordinary dividend for more than ten years, as well as achieving a stable financial position that allows it to borrow at attractive rates.

Market development 2016

The Nasdaq Stockholm exchange fell somewhat during the first six months,

with the biggest intra-day drop coming in conjunction with the British EU referendum at the end of June. The exchange had a positive journey in the second half of the year, ending 2016 up by six percent for the year. Skanska's share price increased 30.5 percent in 2016.

Dividend policy

Skanska's dividend policy is to pay out 40–70 percent of the profit for the year as dividends to the shareholders, provided that the company's overall financial situation is stable and satisfactory.

Dividend

For the 2016 financial year, the Board's assessment is that the Group's financial position and circumstances in general warrant an increase in the dividend by SEK 0.75 per share, and proposes a dividend of SEK 8.25 (7.50) per share. The proposal

Total return of the Skanska share compared to indices

¹ Strategic Benchmark Index consists of listed companies that, taken together, reflects Skanska's operations.

Skanska's share price reached a new record high of SEK 218.70 in December 2016.

is equivalent to a dividend totaling SEK 3,373 M (3,075), corresponding to 52 percent of the profit for the year.

No dividend is paid for the Parent Company's holding of Series B treasury shares, where the aim of the holding is to secure delivery of shares to participants in Skanska's employee ownership program (Seop). The total dividend amount may change by the record date, depending on repurchases of shares and the transfer of shares to participants in Skanska's long-term employee ownership program.

Ownership

The majority of Skanska's shareholders are financial and institutional organizations in Sweden. The largest shareholder is Industriwärdens AB, with voting power of 23.9 percent, followed by Lundbergs with

voting power of 12.3 percent. The third largest shareholder in terms of voting power is Skanska employees through the Seop. Foreign ownership reached a record high during the year of about 26 percent of voting power. Large foreign shareholders include Norges Bank Investment Management.

Funding

Debt markets had a relatively volatile year. Political events such as the British EU referendum and the outcome of the U.S. presidential election pushed bond-spreads higher while central bank initiatives put a downward pressure on spreads, with Bank of England and the European Central Bank extending their quantitative easing programs to encompass also corporate bonds. Following a continuously strong

cash-flow during 2016, Skanska did not issue any new bonds during the year. Bonds amounting to SEK 1.5 billion matured and were not prolonged. Occasional short term funding needs were managed through issuing commercial papers.

Skanska has several borrowing programs – both committed bank credit facilities and market funding programs – which provide good preparedness for temporary fluctuations in the Group's short-term liquidity requirements and ensure long-term funding. At the end of the year, the central debt portfolio amounted to SEK 4.2 billion. The unutilized credit facilities of SEK 5.7 billion combined with the operating financial assets of SEK 10.6 billion (which includes the central debt) ensure the Group has sufficient financial capacity.

Growth in equity

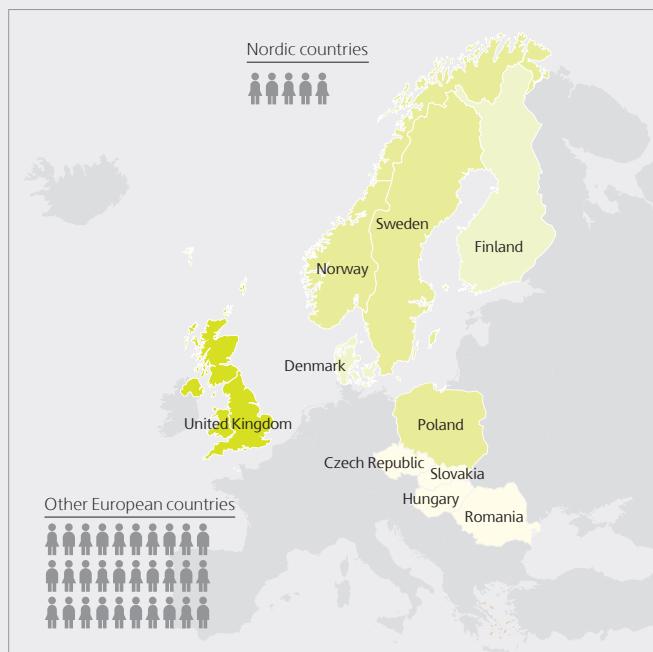

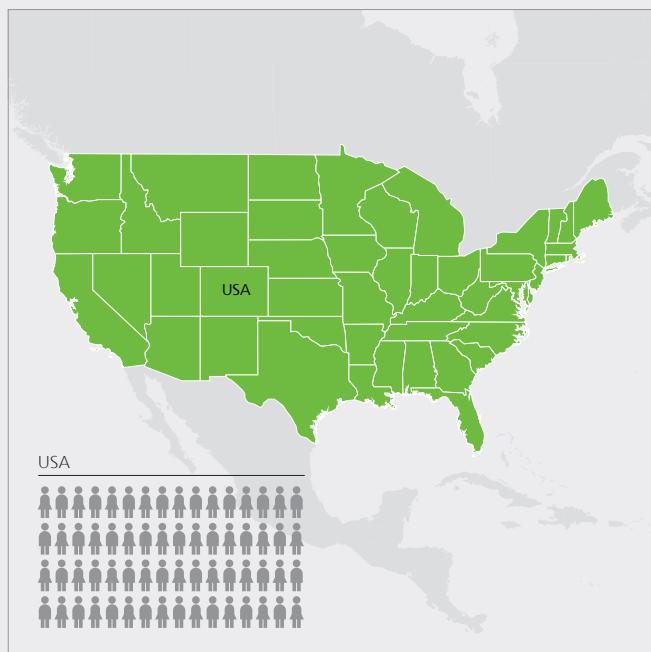

Market overview

Skanska's ability to grow and create value in its home markets is affected by a number of external factors. Some of these variables – macroeconomic as well as more sector-specific – are presented below.

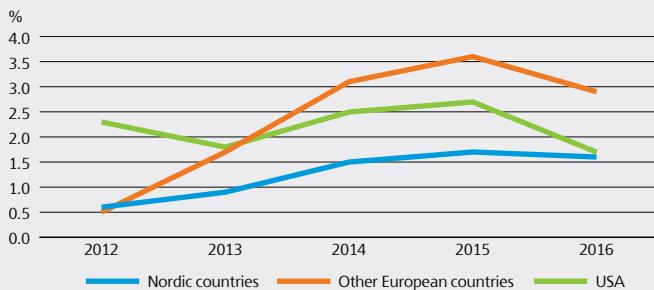

Skanska's home markets

Construction investments 2015
SEK 9,500 billion

Population
2 people = 10 million people

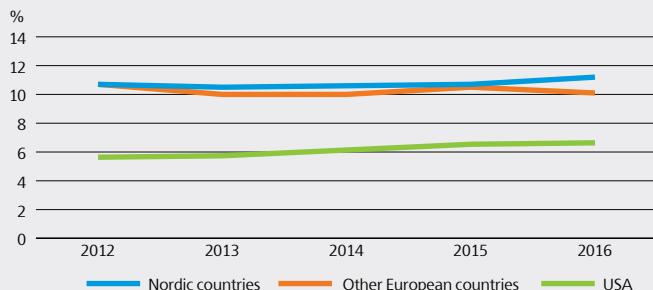

GDP growth in Skanska's home markets

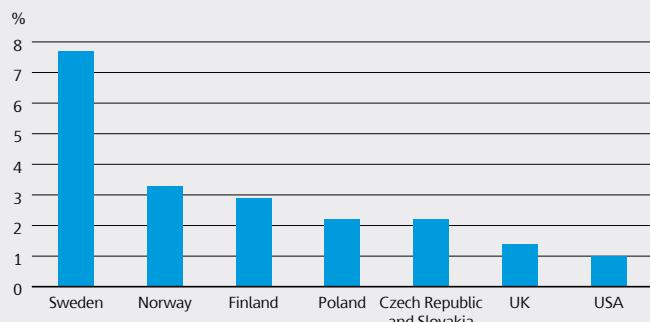

The economic recovery has been strongest in the Central European countries. The Finnish economy is still struggling and pushing down the Nordic average. The U.S. has not had the lows nor the highs of Skanska's other home markets, but is more stable.

Construction investments in Skanska's home markets as a percentage of GDP

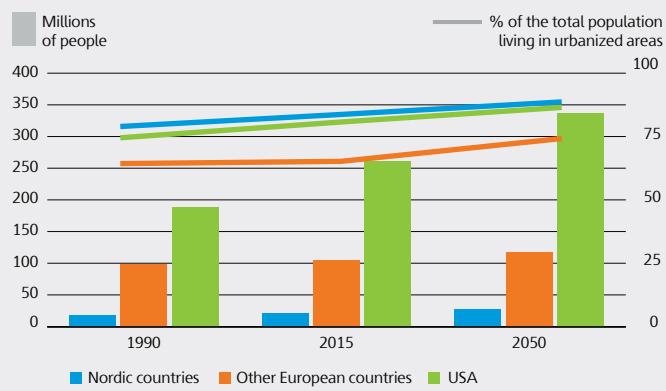

Led by Norway, the Nordics have the highest level of construction investments as a percentage of GDP in Skanska's markets. In the U.S., this share is much lower and is far below pre-crisis levels but increasing, while in Central Europe it has been decreasing.

Market share, Skanska's Construction business stream

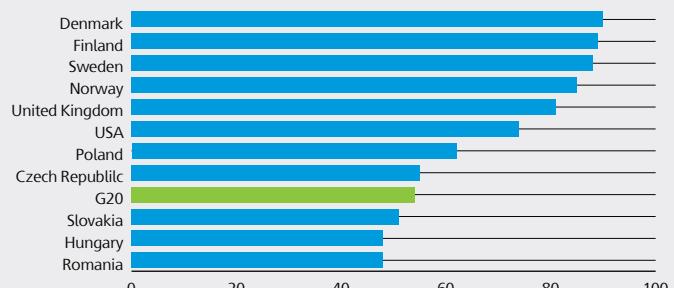

The market share in Sweden is significantly higher than the rest of Skanska's markets. Despite being one of the leading companies in the U.S. and the UK markets, the market share is low due to higher market fragmentation and competition.

Urbanization in Skanska's home markets

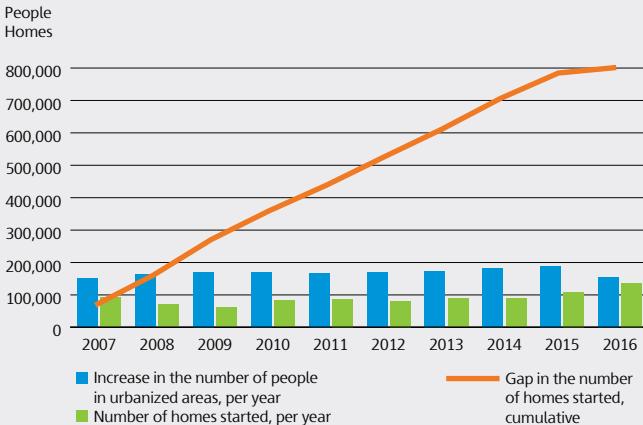

The urban population is increasing all over the world, with an average of 70 percent of the global population living in urban areas by 2050. All of Skanska's markets are above that average and have a higher degree of urban population.

Transparency index

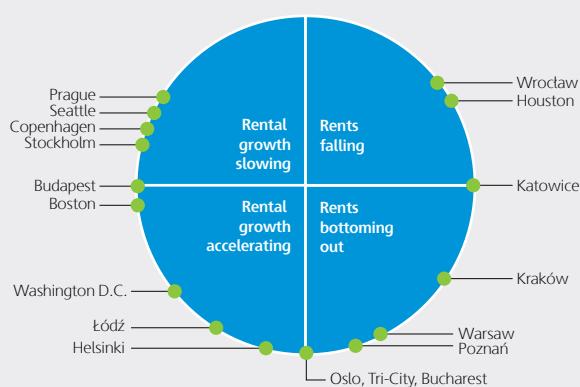

This is a corruption perceptions index that goes from 0–100. The closer a country is to 100 indicates it is less perceived as corrupt. The Central European countries are still struggling with corruption issues, while the situation in the Nordics is much better.

Homes constructed in relation to urbanization growth in Sweden, Norway and Finland

For years, the number of homes started has not matched the number of people moving to urbanized areas. This has resulted in a large deficit in the supply of homes. During 2016, the number of homes started increased compared to previous years.

Property clock

Source: JLL, Q3 2016 and Q4 2016

The Property Clock indicates where the respective market is in the property cycle. Skanska has a diversified portfolio of projects and land in different development phases in the cities listed above.

Sources: JLL, Central Statistics offices, SEB, HSBC, Citibank, Transparency International, UN Department of Economic and Social Affairs, World Bank.

An aerial photograph of a complex highway interchange. A large, multi-lane roundabout is the central feature, surrounded by several straight highway lanes. The roads are dark grey asphalt, and the surrounding land is a mix of green fields and brown, harvested agricultural areas. A few vehicles are visible on the roads.

Providing a safer
and more direct
connection

Czarnków Bypass, Czarnków, Poland | Construction

Like much of what Skanska has built in Poland, this 6.5 km bypass around the town of Czarnków was small in terms of contract size. But in a big way, it exemplifies Skanska's Commit to Customer value.

Before the bypass, the main route went through the historic city center, and with the many trucks congestion, noise, vibration and safety risks to pedestrians were all concerns. During summers, when many people would travel through Czarnków to reach the Baltic Sea, delays through the town could add one hour to the trip. Czarnków was eager to have a bypass.

"This investment was the most important in the history of Czarnków," says Vice Mayor Grzegorz Kaźmierczak.

Skanska worked to understand Czarnków's priorities, so the Group could help achieve them. Construction activities were conducted to have as little impact on traffic as possible. Budget and schedule commitments were met through comprehensive planning; Skanska's deep resources; and safe and efficient production, helped by 3-D modeling and equipment guided by GPS. Above all, proactive communication and collaboration was prioritized between Skanska and the municipality, providing mutual benefits.

"With Skanska, we got the result we wanted," says the Vice Mayor.

Business streams

Skanska's operations are in Construction, Residential Development, Commercial Property Development and Infrastructure Development. The Business Units within these streams collaborate in various ways, creating operational and financial synergies that generate increased value.

Construction

Revenue

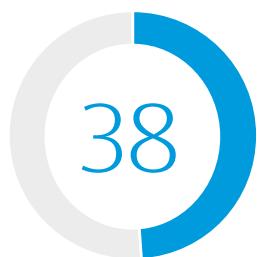

share of Group, %¹

EUR 170 M

Market drivers and key trends

Household confidence indicator

- Potential customers' views on future pay raises, housing costs and borrowing opportunities affect decisions on whether to buy.

Urbanization

- More and more people are moving to cities, leading to increased demand for homes.

Shortage of housing

- Housing production has lagged behind population growth, resulting in an undersupply – more homes need to be built. This means greater demand for the business stream's expertise and products.

Countries

Sweden
Norway
Finland
Poland
Czech Republic

Market drivers and key trends

Lack of financing

- There is often insufficient public financing for the new and expanded infrastructure needed. Public-private partnerships (PPP) allow such projects to be financed.

Lifecycle perspective

- Cost overruns in public projects increase interest in PPP solutions, which have a lifecycle perspective in which resource-efficient, innovative and sustainable solutions are delivered on time and for a fixed total cost.

Attractive investment

- Projects with stable, long cash flows with public counterparties offer attractive returns for investors.

Construction

Well-functioning communities need workplaces, housing, transportation, schools, hospitals and supplies of energy and water. Construction – Skanska's largest business stream in terms of revenue, people and profit – leverages its collective expertise and resources to enhance communities.

Anglian Water Asset Management AMP6, East of England, UK

Skanska is part of the @one Alliance, a collaborative organization of consultants and contractors working with Anglian Water to deliver around 800 projects, which includes designing and constructing water and water recycling treatment centers that serve more than six million people. The alliance delivery model requires collaboration and knowledge sharing between partners, Anglian Water and the supply chain.

Safety is one example of exchanging knowledge. Skanska UK's Injury-Free Environment safety program was adopted by the @one Alliance and rebranded as LIFE – Living in an Injury-Free Environment. The program's success in fostering a safety culture has led Anglian Water to begin adopting LIFE for its own workforce, and that of other alliances. Skanska readily shares its expertise to help care for life.

Anglian Water has set ambitious environmental stewardship targets for lowering carbon emissions. They were an early advocate of reducing carbon, demonstrating how it can lower costs too. Now every Anglian Water project has a carbon goal, and this has inspired innovative and highly effective solutions. Skanska is using lessons learned from Anglian Water to help other customers "think big" about reducing carbon to minimize the impacts of climate change.

Construction

In favorable but competitive market conditions, order bookings were very strong, especially in the U.S. The order backlog reached an all-time high, SEK 196.3 billion. The performance in 2016 was strong in the largest units by revenue, Sweden and USA Building, while the operating margin was negative in Poland and weak in USA Civil.

Major events

The majority of the Construction units had a good or stable performance, and the operating margin for the business stream was 2.6 percent, thus not reaching the target of 3.5 percent or above. Sweden and USA Building stand out as the top performers based on profitability. The other units, except for Poland and USA Civil, showed stable results.

The operating margin in Poland was negatively affected from the market in Poland being impacted by delays in the allocation of designated EU funds, as well as a continued weak performance in certain projects. In USA Civil the operating margin continued to be affected by lower revenue, increased S&A costs and extended negotiations with customers regarding design changes. Over time a great potential can be seen to improve the operating margin in the Construction stream by continuing to focus on improving the performance in units not delivering at their fullest potential. It is a top priority to make sure that these units show better results.

All Business Units, except Finland, had higher order bookings than revenue in 2016. Order bookings in the U.S. was considerably higher than 2015, driven by the SEK 23 billion LaGuardia Airport contract.

Market outlook 2017

The overall construction market outlook continues to be positive. The non-residential and civil markets in Sweden are very strong, although the landscape is competitive. The residential building market continues to be strong. In Norway, the outlook for the civil market remains positive, but with significant and increasing competition in new bids. The non-residential market benefits from increased public investments, while the residential building market is stable except for certain regions that are dependent on the energy sector. The overall market situation in Finland remains relatively weak, but the non-residential building market is improving.

The civil market remains strong in the UK, while the uncertainty in the non-residential building market post Brexit continues. The civil market in Poland and the Czech Republic are still impacted by delays in the allocation of designated EU funds.

In the U.S., the market is strong and the new government is over time expected to increase investments into infrastructure even further. The market for large and complex civil construction projects remains good, although competition is intense. The building market is strong in the aviation, education, data center, life science and healthcare sectors.

Targets and actions – business plan 2016–2020

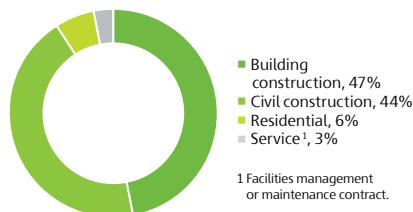

- Controlled growth – stable organizations
- Early Contractor Involvement (ECI)
- Continued focus on working capital
- Decrease number of loss making projects through enhanced risk management
- Operational efficiency
- Operating margin ≥3.5%

Value creation in Construction

Skanska's Construction business stream builds and renovates buildings, industrial facilities, infrastructure and residences. It also executes service-related assignments, in areas such as construction services and facility operations and maintenance.

In keeping with Skanska's business model, contracting assignments are also executed for Skanska's Project Development streams. This collaboration generates large construction assignments, as well as synergies for the Group.

Project and synergy opportunities are also generated thanks to the financial expertise within the Group. A combination of financial strength and global expertise in Construction and Project Development enables Skanska to take on large, complicated projects for international customers with high expectations for quality and

execution. In the very largest projects that require high-level performance guarantees, few competitors can measure up to Skanska in terms of skills and strength.

With a strong risk-assessment focus during the tender stage, Skanska concentrates on securing the right projects, for which there is a balance between risk levels and expected margins. Skanska's ambition is to increase its share of contracts, in which customers value service, quality and reliability – in addition to price – when evaluating tenders. Skanska's clear focus on sustainable development – including Safety, Ethics, Green, Corporate Community Investment, and Diversity and Inclusion – is also a factor that strengthens Skanska's offering to the customer.

Residential Development

Modern families want homes that are comfortable, well-designed, responsibly produced and in good locations. Residential Development combines with Skanska's Construction business stream to provide homes that help make people's lives better and easier.

BoKlok Lingonriiset, Huddinge, Sweden

The BoKlok affordable residential concept jointly owned by Skanska and IKEA celebrated its 20th anniversary in 2016.

Over those two decades, BoKlok – or Live Smart – has developed, built and sold more than 9,000 apartments, mostly in Sweden. BoKlok units are well-planned and comfortable. And they are priced to expand the opportunity of home-ownership while producing good profits, thanks to standardized designs and highly efficient, factory-based production.

One of those 9,000 apartments belongs to twentysomethings Stefan Ohlsson and his partner Emma Sandås. Located south of Stockholm, their 55 sq m (592 sq ft) corner unit includes a bedroom, a living room and a balcony. A town center is nearby and Stockholm is just 15 minutes away. They are “extremely happy” with their first home.

“To stay here is beyond all expectations,” says Stefan. “It is a perfect starting point for Emma and me to build our lives.”

Skanska sees a bright future for BoKlok, especially as housing is much needed in Sweden’s major cities. BoKlok is expanding to Norway and Finland too.

Residential Development

The Residential Development stream continued to improve its performance during the year, reaching an all-time high in operating income and clearly overshooting its return targets. The strong performance is a combination of favorable market conditions and improved operational efficiency.

Major events

Profitability within Residential Development continued to improve in 2016, with the performance in Sweden being very strong. The operating income reached an all-time high and the return targets of 10 percent operating margin and 10 percent return on capital employed were clearly surpassed. Good markets in all Nordic countries, especially strong in Sweden, together with improved operational efficiency contributed to the strong performance.

BoKlok, the affordable homes business, also made a noticeable contribution with its high operational efficiency and great returns.

During the year, 4,848 (4,000) homes were started and 4,603 (4,093) were sold. A majority of the homes were started and sold in Sweden.

Market outlook 2017

The Swedish residential market is still strong and the new amortization requirements have led to a more balanced market.

The Norwegian market is stable but is being negatively affected by low oil prices in certain regions that are dependent on the energy sector. There are signs of improvement in the Finnish market.

In Central Europe the market is solid, with high transaction volumes and stability in sales prices.

Common to all home markets, except for Finland, is the challenge to acquire and develop land due to increasing prices and long permitting processes.

Generating value in Residential Development

Generating value in Residential Development begins with an analysis of macroeconomic and demographic trends. Where is the growth, who are the target groups and what do they need and want?

Before making land purchases, Skanska analyzes local conditions in detail. Then begins a step-by-step process aimed at ultimately offering customers the best possible value. During the planning stage, Skanska establishes a framework in close collaboration with the municipal authorities. Based on the potential offered by the surroundings, a neighborhood with a distinct character is created. An attractive neighborhood is designed and built on the basis of the residents' needs and environmental considerations. Skanska's own sales organization then markets the new homes to the right target groups.

Commercial Property Development

Studio, Malmö, Sweden

Malmö has a new meeting point, a creative and dynamic environment with offices, a hotel and great ways to relax – perhaps by watching a dance performance in the exhibition space or having a drink on the rooftop bar with views of the Öresund strait. This 20,000 sq m (215,000 sq ft) property lives around the clock.

The integrated setting attracted software company BIMobject.

"We are a global company, so colleagues coming to visit can stay in the hotel and be down in the office in a minute – that is a great concept," says BIMobject CFO Stefan Hansson.

Skanska developed Studio to reflect the diversity of Malmö's companies: desks can be rented for a day in a co-working space; unique "box" offices are for up to 20 employees; and there are more traditionally sized offices for larger companies.

Making this complex, LEED Platinum pre-certified building successful was early and ongoing collaboration between Commercial Property Development and Construction. A joint risk assessment and schedule aligned decision making to better deliver on customer commitments.

Skanska creates healthy, environmentally efficient and customer-focused offices and properties. Commercial Property Development initiates, develops, leases and divests properties that Skanska's Construction business stream builds. These buildings contribute to occupant well-being and creativity, and to customer profitability.

Commercial Property Development

The high level of activity and profitability continued in 2016 with all geographies – the U.S., Nordics and Central Europe – contributing to the success. 26 new projects were started during the year and gains from property divestments were the highest ever, reaching SEK 3.1 billion.

Major events

The high level of activity in terms of investments, leasing and divestments continued during the year, and by the end of 2016 Skanska had 47 ongoing projects. Gains from property divestments reached an all-time high of SEK 3.1 billion, with all three geographies contributing to this success.

In April, Skanska sold its office development project 101 Seaport in Boston, USA, for about SEK 3.8 billion, the largest commercial property divestment in Skanska's history.

In Malmö, Sweden, two major office properties were divested in May, for a total value of about SEK 1.6 billion.

In December, three properties were divested across Budapest, Hungary, and Warsaw, Poland, for an amount of about SEK 2.0 billion.

In 2016, a total of 26 projects were started, spread across all geographies. In terms of leasing activity, 379,000 sq m was leased during 2016.

In the fourth quarter, writedowns amounting to about SEK 200 M were taken on two projects in the so-called Energy Corridor in Houston, USA.

Market outlook 2017

Vacancy rates for office space in most of the Nordic and Central European cities where Skanska has operations are stable.

Vacancy rates are low in Sweden in particular. Demand for office space is strong in Poland and continues to improve in other parts of Central Europe. In the U.S., demand from tenants continues to improve in Washington D.C., and remains strong in Boston and Seattle, while demand in Houston is weaker due to low oil prices.

Modern properties with high-quality tenants are in demand from property investors, resulting in attractive valuations for these properties. Investor appetite for newly developed properties remains strong in the Nordics, especially Sweden, the U.S. and Central Europe. In Poland the foreign investor appetite is still strong but has softened somewhat due to the political turbulence. In all home markets, except for Finland, there is a challenge to acquire and develop land due to increasing prices and long permitting processes.

Value creation in Commercial Property Development

The development of commercial projects is a continuous process with a number of clearly defined phases. The average development cycle from project idea to completion is 5–7 years.

All acquisitions of land is preceded by macroeconomic and local market analysis. A major step in value creation is taken when the zoning plan is approved for undeveloped land. The design is based on previous experience and adjusted to local market demands aimed at creating appropriate premises for tenants and property investors as well as enabling an efficient construction execution. A successful leasing process usually begins in connection to the start of construction, with most leases signed before construction completion. The construction projects are carried out by Skanska's local construction units. Property management and work with customers can add further value to the property. All projects are developed with divestment as the ultimate goal. Divestment occurs when Skanska has provided maximum value to the project within its competency areas.

Infrastructure Development

The Infrastructure Development business stream helps advance essential infrastructure such as highways, hospitals and schools using Skanska's financial expertise. These public-private partnerships – that Skanska's Construction business stream builds – provide optimal solutions for each project's entire life.

New Karolinska Solna, Solna, Sweden

Karolinska University Hospital's new facility has partly come to life, with the first patients having moved into the initial patient wing in November 2016 – right on schedule after six years of construction.

This represents a major milestone for providing patients with the most advanced care. It also demonstrates the great potential of public-private partnerships (PPP), which help advance important public projects. Skanska's consortium is responsible for financing, design, construction and maintenance through 2040.

Much hard work and smart thinking have gone and continue going into the new hospital buildings, with construction of subsequent phases ongoing. Reactions like this from hospital staff make all the efforts worthwhile.

"Every time I walk into the new hospital building, I get a sense of the future," says Cecilia Zaar, Oncology Clinic Executive Assistant. "It's inspiring to see the development of a hospital at the edge of its expertise."

For another reason 2016 was a key year for the project: that first patient wing achieved challenging Gold certification under the international LEED green rating system. New Karolinska Solna will be one of the world's most environmentally responsible university hospitals.

Infrastructure Development

2016 was a year with high activity for Infrastructure Development. Financial close for the LaGuardia Airport project in New York, USA, was reached at the beginning of June, and in December, Skanska divested its investment in the M25 motorway in London, UK.

Major events

In Infrastructure Development the year ended with the realization of the value created in one of its investments – the M25 motorway in London, UK. The divestment gain was a strong contributor to the operating income of about SEK 1.8 billion, including impairments amounting to about SEK 300 M in two operational wind power projects in Sweden and for investments in one project no longer pursued in the UK.

At the beginning of June, Skanska reached financial close for the LaGuardia Airport project in New York, USA. As a 33.3 percent shareholder of the joint venture, Skanska's equity investment will be about SEK 580M. Skanska's share of the construction contract amounted to about SEK 23 billion and was included in the order bookings for USA Civil and USA Building in 2016.

The net present value of projects at the end of the period decreased to SEK 4.3 billion (4.8). The decrease is attributable to investments/divestments, consisting of the divestment of the investment in the M25 motorway project, investments in existing projects, as well as the wind power project impairments amounting to about SEK 300 M. The increase in derisk/time value is partly attributable to a revaluation of the A1 motorway according to the agreed price in the signed Sale and Purchase Agreement. The unrealized development gain in the project portfolio amounted to SEK 1.4 billion at the end of the year.

Market outlook 2017

The public-private partnership (PPP) market in the U.S. is strong, albeit with considerable competition. In the other markets the pipeline is thin, with the Norwegian market showing signs of improvement.

Targets and actions – business plan 2016–2020

- Maximize the value of existing portfolio
- Growth in the U.S.
- Develop presence in Norway and the UK
- Increase total profit

Value creation in Infrastructure Development

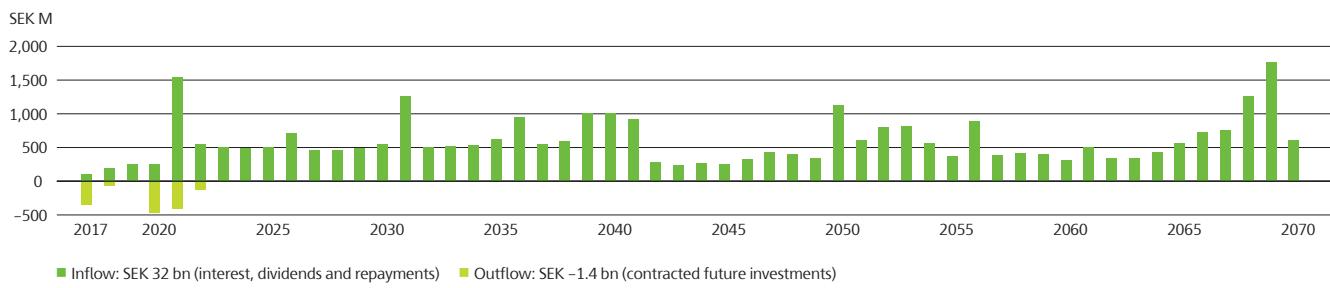

Public-private partnership is a form of public procurement in which a project company owned by private companies is given complete responsibility for developing, financing, building, operating and maintaining public facilities such as large hospitals, schools, airports and highways. As the investment is partially or entirely privately financed, public sector customers' costs can be spread over a longer period of time. A life-cycle perspective is used to create resource-efficient, innovative and sustainable solutions.

The project company's incentives become benefits for the customer:

- **Established total cost.** An insurance against financial surprises.
- **A fixed annual price.** The customer pays agreed compensation over a predetermined period.
- **Delivery on time with the right quality.** Compensation is only paid once the facility goes into operation.
- **Frees up resources.** Having a counterparty with overall responsibility allows the customer to focus on its core operations.

Auditor's Report	164

The Board of Directors and the President of Skanska AB (publ) hereby submit their report on the operations of both the company and the Group in 2016.

Revenue decreased somewhat both in Swedish kronor and in local currencies, while operating income increased both in Swedish kronor and in local currencies compared to the previous year. In Construction, profitability was stable in a majority of the units and was particularly strong in Sweden and USA Building, while project development operations reported strong results throughout. Profitability in the Polish construction operations was negatively impacted by delays in the allocation of EU funds, but also by lower profitability in certain projects, which resulted in restructuring of the operations. The profitability of USA Civil continues to be affected by higher costs caused by earlier design changes by clients. Skanska USA Civil is in dialogue to establish how these increased costs will be split. Order bookings were strong, especially in the U.S., Sweden and the UK. Operations in the U.S. in particular reported higher order bookings during the year, largely due to the LaGuardia Airport project. The order backlog at the end of the year was SEK 196.3 billion and is a result of a structured bidding process in a strong but competitive market. Profitability in Residential Development continues to improve, partly due to a combination of a strong market and increasingly efficient execution of the projects. In Sweden, demand continues to outstrip supply and the new amortization requirements have brought the market more into balance. In Norway and Finland, the market is stable and the focus is on creating new projects in the fastest growing areas. BoKlok – Skanska and IKEA's housing concept – made a strong contribution with its operational efficiency and high returns. Commercial Property Development also had a very active and profitable year in all of its three geographies – Nordic, Central Europe and USA – and in 2016 sold properties for SEK 9.6 billion with capital gains of about SEK 3.1 billion, according to segment reporting. At the end of the year Commercial Property Development had 47 ongoing projects. Infrastructure Development sold its investment in the M25 motorway in London, UK at the end of the year. During the year Infrastructure Development signed a third public-private partnership (PPP) agreement in the U.S. for the LaGuardia Airport project, which also contributed to strong order bookings for USA Building and USA Civil. This is a result of the continued focus on increasing the synergies in Skanska's business model, according to which capital generated in construction operations is invested in development operations, which in turn generates construction assignments and future development gains.

Construction

The market outlook for construction remains positive. The market for building construction and civil construction projects in Sweden is very strong although competition is significant. The market for residential construction is still strong. In Norway, the market for civil construction projects remains good, but with strong and increased competition for new bids. The market for building construction is improving as a result of increased public investment, while the market for residential construction is stable except in certain regions that are dependent on the energy sector. The market in Finland remains relatively weak overall although there are signs of an improvement in residential construction. The market for civil construction projects is still strong in the UK, while the market for commercial building construction continues to be characterized by uncertainty following the EU referendum. In Poland and the Czech Republic, the market for civil construction projects is still affected

by delays in the allocation of EU funds. In the U.S., the market is strong and with the new U.S. Government, investments in infrastructure are expected to increase further. The market for large and complex civil construction projects remains good although competition is intense. In building construction, the airports, education, data centers, healthcare and life sciences segments are strong.

Residential Development

The residential market in Sweden remains strong. The new amortization requirements have resulted in a more balanced market. The Norwegian market is stable but has been negatively affected by low oil prices in certain regions that are dependent on the energy sector. The Finnish market shows signs of improving. In Central Europe the market is strong, with high transaction volumes and stable selling prices. What all the home markets – except Finland – have in common is the challenge of acquiring and developing land because of rising prices and long planning processes. During the year 4,603 (4,093) units were sold and 4,848 (4,000) units were started. At the end of the year there were 7,421 (5,689) units in production and 77 percent (76) of these have been sold.

Commercial Property Development

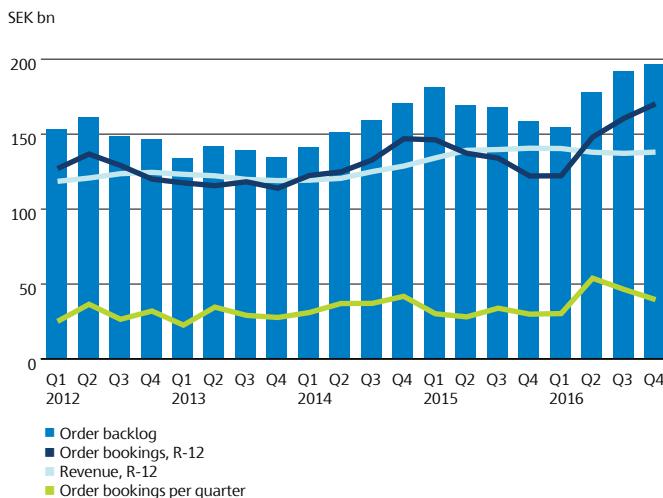

Vacancy rates for office space in the majority of the Nordic and Central European cities where Skanska has operations are relatively stable. The vacancy rate is low in Sweden in particular. Demand for office space is strong in Poland and improving in other parts of Central Europe. In the U.S., demand from tenants continues to improve in Washington D.C. and remains good in Boston and Seattle, while demand in Houston is weaker on the back of low oil prices. Modern properties with long-term tenants are in high demand among property investors, resulting in attractive valuations for these properties. Interest from investors in newly developed properties is strong in the Nordic region, particularly Sweden, the U.S. and Central Europe. In Poland, interest from foreign investors remains strong but has weakened somewhat due to the political turbulence. In all of the home markets, except Finland, acquiring and developing land is a challenge because of rising prices and long planning processes. During the year 26 projects were started across all of the geographies – U.S., Central Europe and Nordic region – and at the end of the year there were 47 projects in progress.

Infrastructure Development

The market for public-private partnership (PPP) projects is strong in the U.S. despite considerable competition. In the other markets the outlook for new PPP projects is weak, although the market in Norway shows signs of improving. At the end of the year the net present value of the projects was SEK 4.3 (4.8) billion.

Order bookings and order backlog

Order bookings, backlog and revenue in construction

Order bookings

Order bookings increased by 39 percent compared with the previous year and amounted to SEK 170.2 billion (122.1), an increase of 40 percent in local currency. Order bookings in SEK were 23 percent higher than revenue in 2016, in comparison with 2015 when order bookings were 13 percent lower than revenue. Order bookings were good across the board but particularly strong in the U.S. operations, where the LaGuardia project in New York is the foremost project.

The contracts signed in 2016 included a number of substantial contracts in segments that are important to Skanska.

Nordic countries

In Sweden, a number of major orders were received, the largest of which was a contract with European Spallation Source (ESS) to build the third phase of a world-class research facility in Lund. The contract value is around SEK 2.5 billion and the work will be carried out by Skanska Sweden (75 percent) in partnership with Skanska UK (25 percent). Skanska Sweden signed a 10-year lease with Linnaeus University in Kalmar, which resulted in a construction contract worth about SEK 1.0 billion. In addition, Skanska received an order for conversion and extension of additional premises on the campus with an order value of about SEK 500 M. In a joint arrangement with MT Højgaard, Skanska Sweden also signed a contract with the City of Gothenburg Urban Transport Administration to build the Hisingsbron bridge over the Göta älv river, with an order value for Skanska of around SEK 1.4 billion. In Norway, Skanska signed a contract with the Norwegian Public Roads Administration to rebuild a section of the E16 in Norway with an order value of around SEK 730 M. Skanska Norway also won a contract with Eidsiva Vannkraft AS to build Nedre Otta power plant in the municipalities Sel and Vågå, with an order value of about SEK 650 M. In Finland, Skanska signed an agreement with the investor LähiTapiola Group for the construction of Seppä shopping center in Jyväskylä, with an order value of about SEK 480 M.

Rest of Europe

Skanska UK received a number of substantial orders during the year, the largest of which was a contract with Highways England, in a joint arrangement with Costain, Balfour Beatty and Carillion, to deliver the A14 Cambridge to Huntingdon road improvement scheme with an order value for Skanska of about SEK 3.4 billion. Skanska also signed a seven-year highways maintenance contract with Devon County Council. The total value over the course of the contract is about SEK 2.9 billion but the value for Skanska UK in the first two years will be included in order bookings, which will be about SEK 820 M. Skanska UK was also awarded a contract to design and construct the Waterloo and South West Upgrade on the South West Trains network in the South of England in alliance with Aecom, Colas Rail and Mott MacDonald, with an order value for Skanska of about SEK 1.9 billion. In addition, in a joint arrangement with BAM Nuttall, Skanska signed a contract with Network Rail for the Northern Hub project in Manchester with an order value for Skanska of about SEK 900 M. In Slovakia, Skanska was awarded a contract by the National Highway Authority, NDS, to build an extension of the D1 highway in eastern Slovakia with an order value of about SEK 1.8 billion. In Poland, Skanska signed a contract with General Directorate of Public Roads and Motorways in Poland for an expansion of National Road No 8 with an order value of about SEK 750 M.

North America

Skanska USA secured several major projects during the year in both Civil and Building. The largest contract that Skanska USA Civil and Skanska USA Building received was a contract for the design and construction of LaGuardia Airport Central Terminal B in New York City. The value of the construction contract for Skanska is about SEK 23 billion in total, which will be divided equally between Skanska USA Civil and Skanska USA Building. Construction is being implemented as a PPP project, with Skanska ID as one of the shareholders. During the year Skanska USA Civil was awarded a contract by the Florida Department of Transportation to construct the new Pensacola Bay Bridge in Florida with an order value of about SEK 3.3 billion. In addition, in a joint arrangement with Stacy & Witbeck and Herzog, Skanska USA Civil signed an agreement with San Diego Association of Governments (SANDAG) to construct the Mid-Coast Trolley light rail system in San Diego, with an order value for Skanska of about SEK 2.6 billion. Skanska USA Civil was also awarded a contract by the Washington State Department of Transportation to reconstruct both lanes of the Interstate 5 freeway at its interchange with Washington State Route 16 in Tacoma, with an order value of about SEK 1.0 billion. Skanska USA Building has received a substantial number of projects within the healthcare sector in particular. Skanska USA Building signed a contract with Inspira Health Network to build a new hospital building in New Jersey with an order value of about SEK 1.7 billion. In Florida, in a joint arrangement with Gates Construction, Skanska USA Building was awarded a contract with Lee Memorial Health System to expand and renovate the Gulf Coast Medical Center in Fort Myers, with an order value for Skanska of about SEK 1.5 billion. Also, in a joint arrangement with Closner Construction, Skanska USA Building signed a contract with Duke LifePoint Healthcare to build its new replacement hospital in Michigan with an order value for Skanska of around SEK 1.5 billion. In Delaware, Skanska USA Building was awarded a contract to build the new Women and Children's Health Building for Christiana Care Health System, with an order value of about SEK 1.5 billion.

Finally, Skanska USA Building signed a contract with Eighth and Demonbreun Hotel for the construction of its new JW Marriott Hotel in Nashville, with an order value of about SEK 1.3 billion.

Order bookings and order backlog

Business Unit	Order bookings		Order backlog	
	2016	2015	2016	2015
Sweden	36,041	32,989	35,416	31,398
Norway	13,406	13,207	12,573	10,268
Finland	6,537	7,208	6,118	6,341
Poland	9,848	9,348	6,487	4,851
Czech Republic	5,616	5,685	5,614	4,716
UK	20,860	19,250	26,297	27,705
USA Building	51,036	22,592	55,786	36,789
USA Civil	26,900	11,825	47,963	36,180
Total	170,244	122,104	196,254	158,248

Order backlog

The order backlog increased by 24 percent, or 20 percent in local currencies, and at the end of the year amounted to SEK 196.3 billion (158.2). The order backlog is equivalent to about 17 (14) months of production.

The North American, Nordic and other European operations accounted for 53, 28 and 19 percent of the order backlog respectively.

Segment and IFRS Reporting

The Group reports its Residential Development and Commercial Property Development segments according to a method in which sales revenue and gains on the divestment of properties – residential as well as commercial – are recognized when binding sales contracts are signed. When reporting in compliance with IFRS, revenue and gains on divestment of properties are recognized when the purchaser takes possession of the property or home. Accrual differences within Commercial Property Development generally occur across only a few quarters. Within Residential Development, the difference can remain for a lengthy period depending on changes in projects started and the rate of sales. The differences between the two methods, with respect to revenue and operating income, are summarized in the tables below.

Revenue

SEK M	2016	2015
Revenue by business stream according to segment reporting		
Construction	138,001	140,648
Residential Development	13,264	12,298
Commercial Property Development	10,226	9,034
Infrastructure Development	237	106
Central and eliminations	-10,421	-7,151
Total revenue according to segment reporting	151,307	154,935
Difference in accounting principles	-5,942	-1,886
Total revenue according to IFRS	145,365	153,049

Revenue according to segment reporting decreased by 2 percent to SEK 151.3 billion (154.9). In local currencies, the revenue decrease was 1 percent. In the Construction business stream, revenue in SEK decreased by 2 percent. SEK 17.3 billion (15.7) of revenue in

Construction, equivalent to 12 percent (11), was generated by the Group's project development operations. To reconcile with IFRS, the revenue is added from the homes and properties that were sold in prior years but which were handed over during the year. Then the revenue from the homes and properties that were sold during the year but are yet to be occupied by the purchaser is subtracted. Of the SEK 13,264 M (12,298) in Residential Development revenue, SEK 1,548 M (854) consists of revenue from joint ventures which has been included line by line according to the proportional method of accounting.

Operating income

SEK M	2016	2015
Operating income by business stream according to segment reporting		
Construction	3,546	3,874
Residential Development	1,605	1,174
Commercial Property Development	2,336	1,947
Infrastructure Development	1,818	863
Central ¹	-1,140	-1,346
Eliminations	34	-51
Operating income according to segment reporting	8,199	6,461
Difference in accounting principles	-979	-171
Operating income according to IFRS	7,220	6,290

¹ Including the Latin American operations

Operating income according to segment reporting amounted to SEK 8,199 M (6,461).

Impairment losses on current and non-current assets were charged to operating income in the amount of SEK -534 M (-102).

Construction

In the Construction business stream, operating income decreased by 8 percent, amounting to SEK 3,546 M (3,874). The operating margin also decreased compared to the previous year and amounted to 2.6 percent (2.8). The comparative period includes writedowns of SEK 750 M in the U.S. construction operations. Profitability was stable in the majority of the construction operations, with Sweden and USA Building reporting the strongest results. In contrast, the market in Poland was negatively affected by delays in the allocation of designated EU funds, which resulted in a sudden decrease in small and medium-sized projects. The operations have been restructured and the organization right-sized. This, together with continued weak results in certain projects, had a negative effect on Polish earnings during the year. Once the EU funds are in place, the Polish market is seen as robust in the long term. The operating margin in USA Civil continues to be affected by increased project costs caused by earlier design changes by the client, and the company is in discussions concerning how these cost increases will be apportioned.

Residential Development

The operating income for Residential Development amounted to SEK 1,605 M (1,174), while the operating margin for the business stream increased to 12.1 percent (9.5) and was particularly strong in Sweden. The operations in Norway in particular, but also in Finland, reported improved earnings. Impairment losses on current assets in Residential Development were charged to earnings in the amount of SEK -42 M (-19).

Commercial Property Development

Operating income for the Commercial Property Development business stream amounted to SEK 2,336 M (1,947). Properties were sold during the year for a value of SEK 9,555 M (8,457), with capital gains amounting to SEK 3,111 M (2,564). During the year impairment losses were applied to two projects in the so-called "energy corridor" in Houston, USA, of SEK -198 M.

Infrastructure Development

Operating income in Infrastructure Development amounted to SEK 1,818 M (863). The operating income includes a capital gain for the sale of the investment in the M25 motorway in London, UK. Also during the year, impairment losses of SEK -331 M were charged to earnings, mainly on wind power projects in Sweden.

Central

Central expenses, including businesses being wound down, amounted to SEK -1,140 M (-1,346). In the comparative year there were costs of SEK 300 M related to the closure of the operations in Latin America, which were reported under Central with effect from January 1, 2013. Skanska has no ongoing projects in Latin America.

Eliminations of intra-Group profits

Reversals/eliminations of intra-Group profits amounted to SEK 34 M (-51). At the Group level, this included elimination of profits in the Construction business stream relating to property projects. Eliminations are reversed when the projects are divested.

Income according to IFRS

Operating income

SEK M	2016	2015
Revenue	145,365	153,049
Cost of sales	-131,119	-139,160
Gross income	14,246	13,889
Selling and administrative expenses	-9,152	-8,869
Income from joint ventures and associated companies	2,126	1,270
Operating income	7,220	6,290

Gross income was SEK 14,246 M (13,889). Gross income includes income from operating activities, including gains on divestments in Residential Development and Commercial Property Development. Divestments of commercial properties resulted in a capital gain of SEK 3,301 M (3,022). Selling and administrative expenses increased to SEK -9,152 M (-8,869), which is equivalent to 6 percent (6) of revenue. These also include operations that have been wound up or sold.

Income from joint ventures and associated companies totaling SEK 2,126 M (1,270) is mainly from holdings reported in the Infrastructure Development business stream and includes gains from the divestment of holdings in projects.

Income after financial items

SEK M	2016	2015
Operating income	7,220	6,290
Interest income	71	88
Pension interest	-101	-93
Interest expense	-245	-327
Capitalized interest expense	176	194
Net interest income/expense	-99	-138
Change in fair value	2	-25
Other financial items	-22	-151
Income after financial items	7,101	5,976

Financial items amounted to SEK -119 M (-314).

Net interest improved to SEK -99 M (-138). Interest income decreased to SEK 71 M (88), mainly as a result of lower market interest rates. Interest expense decreased to SEK -245 M (-327), which was attributable to both a lower level of borrowing and lower interest rates on loans. However, interest rate swaps and negative interest on bank balances made a negative contribution to interest expense relative to the level of borrowing.

Capitalization of interest expense in Skanska's own ongoing projects amounted to SEK 176 M (194).

Net interest on pensions, which refers to the net amount of interest expense for pension obligations calculated at the beginning of the year and the expected return on plan assets, increased to SEK -101 M (-93). The change in market value of financial instruments amounted to SEK 2 M (-25) and is mainly due to lower interest expense for hedging of investments in foreign subsidiaries, since the majority of the hedges were wound up at the end of 2015.

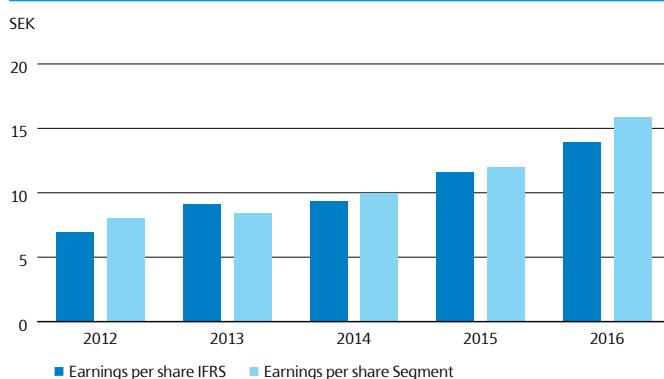

Other financial items amounted to SEK -22 M (-151) and mainly consisted of exchange-rate effects and various fees for credit facilities and bank guarantees. This amount includes a non-recurring cost related to the early closure of a currency hedge.

Profit for the year

SEK M	2016	2015
Income after financial items	7,101	5,976
Taxes	-1,366	-1,185
Profit for the year	5,735	4,791
Profit for the year attributable to		
Equity holders	5,722	4,780
Non-controlling interests	13	11
Earnings per share for the year, SEK	13.96	11.63

After subtracting the year's tax expense of SEK -1,366 M (-1,185), equivalent to a tax rate of 19 percent (20), profit for the year attributable to equity holders amounted to SEK 5,722 M (4,780). The effective tax rate for 2016 is somewhat lower than for 2015. This is mainly due to a greater effect from tax-free sales of infrastructure projects in 2016 than in 2015. Tax-free sales take place in corporate form (shares) and can take place with no tax effect. This positive effect is countered by the fact that a larger proportion of earnings in 2016 is attributable to operations in the U.S., where taxes are significantly higher than in Europe. Taxes paid for the year amounted to SEK -1,205 M (-804). Earnings per share amounted to SEK 13.96 (11.63).

Earnings per share

Comprehensive income for the year

SEK M	2016	2015
Profit for the year	5,735	4,791
Other comprehensive income		
Items that will not be reclassified to profit or loss		
Remeasurement of defined-benefit pension plans	-1,127	785
Tax on items that will not be reclassified to profit or loss	189	-175
	-938	610
Items that have been or will be reclassified to profit or loss		
Translation differences attributable to equity holders	1,165	71
Translation differences attributable to non-controlling interests	8	-3
Hedging of exchange-rate risk in operations outside Sweden	36	-21
Effect of cash flow hedges	31	54
Joint ventures' and associated companies' share of other comprehensive income	855	281
Tax on items that have been or will be reclassified to profit or loss	-4	-15
	2,091	367
Other comprehensive income after tax	1,153	977
Comprehensive income for the year	6,888	5,768
Total comprehensive income for the year attributable to		
Equity holders	6,867	5,760
Non-controlling interests	21	8

Other comprehensive income after tax for the year amounted to SEK 1,153 M (977). The change in translation differences attributable to equity holders amounts to SEK 1,165 M (71). This item, which consists of the change in accumulated translation differences when translating the financial reports of operations outside Sweden, mainly consists of positive translation differences in U.S. dollars, euros, Norwegian kroner and Czech koruna. During the year about 10 percent of equity in foreign currency was currency hedged, which resulted in a positive effect of SEK 36 M (-21) in other comprehensive income – see also Note 6.

Remeasurement of the net pension liability including social insurance contributions amounted to SEK -1,127 M (785). The negative effect is mainly explained by a lower discount rate for pension plans in Sweden and the UK. The effect is reduced by the actual return on plan assets being greater than the expected interest income for the plan assets.

The effect of cash flow hedges amounted to SEK 31 M (54).

Hedge accounting is employed in several business streams. The share of other comprehensive income for joint ventures and associated companies amounted to SEK 855 M (281). Infrastructure Development is the business stream in which the effect on the reserve for cash flow is the greatest. The item includes changes in unrealized gains and losses on hedging instruments as well as the effect of realized hedging instruments. The Infrastructure Development business stream uses interest rate swaps for long-term hedging of interest expense relating to long-term infrastructure development projects. The item includes fair value measurement of interest rate swaps of this kind from joint ventures in Infrastructure Development. The reserve for cash flow hedges is affected by fair value measurements even if Skanska will receive compensation via the client's future payments. The cash flow reserve decreased during the year, which is mainly explained by the fact that interest rate swaps in Skanska's joint venture for the M25 are no longer included in the reserve following the sale of the motorway project. In addition, the reserve decreased as a result of interest rate swaps maturing and being capitalized. The decrease was to some extent reduced by changes in market interest rates.

Total comprehensive income for the year amounted to SEK 6,888 M (5,768).

Investments/divestments

SEK M	2016	2015

The Group's investments totaled SEK -20,799 M (-17,611). Divestments amounted to SEK 20,942 M (20,752) and the Group's net investments amounted to SEK 143 M (3,141).

Investments in property, plant and equipment, which mainly consist of ongoing investments in operations, amounted to SEK -1,636 M (-1,485). Divestments of property, plant and equipment amounted to SEK 411 M (636).

Depreciation of property, plant and equipment amounted to SEK -1,306 M (-1,477).

Net investments in current-asset properties amounted to SEK -559 M (3,160). Projects were sold for SEK 16,549 M (18,524), while investments amounted to SEK -17,108 M (-15,364). In Residential Development investments in current-asset properties amounted to SEK -9,005 M (-6,645), of which about SEK -1,994 M (-1,351) was for land equivalent to 5,759 building rights. Completed homes were sold for SEK 7,508 M (8,622). Net investments in current-asset properties in Residential Development amounted to SEK -1,497 M (1,977).

In Commercial Property Development investments in current-asset properties amounted to SEK -8,103 M (-8,719), of which around SEK -1,936 M (-1,240) was for land, and the total investments amounted to SEK -8,364 M (-8,826). Divestments of current-asset properties amounted to SEK 9,041 M (9,902). Net divestments in current-asset properties in Commercial Property Development amounted to SEK 938 M (1,183).

Investments in the form of equity and subordinated loans in Infrastructure Development amounted to SEK -1,336 M (-234) and divestments amounted to SEK 3,102 M (1,114). Net investments in Infrastructure Development were SEK 1,766 M (880).

Consolidated operating cash flow

SEK M	2016	2015
Cash flow from business operations	2,302	3,077
Change in working capital	-1,328	3,312
Net investments (-)/divestments (+)	-719	2,685
Accrual adjustments	-96	-68
Taxes paid in business operations	-1,237	-966
Cash flow from business operations including taxes paid	-1,078	8,040
Net interest items and other financial items	-108	-542
Taxes paid in financing activities	32	162
Cash flow from financing activities	-76	-380
Cash flow from operations	-1,154	7,660
Strategic net divestments (+) / investments (-)	862	456
Dividend etc ¹	-3,874	-3,226
Cash flow before change in interest-bearing receivables and liabilities	-4,166	4,890
Change in interest-bearing receivables and liabilities	-2,400	-2,235
Cash flow for the year	-6,566	2,655
Cash and cash equivalents, January 1	11,840	9,107
Exchange-rate differences in cash and cash equivalents	156	78
Cash and cash equivalents, December 31	5,430	11,840
1 Of which repurchases of shares	-793	-416

Cash flow for the year amounted to SEK -6,566 M (2,655).

Cash flow from business operations amounted to SEK -1,154 M (7,660). Net investments in business operations amounted to SEK -719 M (2,685). The change in working capital impacted cash flow negatively and the change totaled SEK -1,328 M (3,312). This is a result of the sale of the investment in the M25 motorway in the UK, for which the payment of SEK 3.1 billion will be received at the beginning of 2017. The negative change in working capital and the change in net investments are the main reasons for lower operating cash flow compared with 2015.

Taxes paid in business operations amounted to SEK -1,237 M (-966).

The change in interest-bearing receivables and liabilities amounted to SEK -2,400 M (-2,235).

Cash flow for the year of SEK -6,566 M (2,655) combined with translation differences of SEK 156 M (78) decreased cash and cash equivalents to SEK 5,430 M (11,840).

Development projects within Commercial Property Development and Infrastructure Development that have been sold but had not been handed over as of December 31, 2016 will have a positive effect on the cash flow of around SEK 5.9 billion in 2017.

Financing and liquidity

At year-end 2016, the Group had interest-bearing net receivables, including provisions, amounting to SEK 1,219 M (6,317). The Group's unutilized credit facilities totaled SEK 5,713 M (5,497) at

year-end. Of these, SEK 5,312 M was unutilized long-term credit maturing at the end of June 2019. Interest-bearing assets decreased to SEK 16,318 M (20,511). Of these, receivables in foreign currencies accounted for 84 percent (89). The average interest rate refixing period for all of the Group's interest-bearing assets was 0.1 (0.1) years and the interest rate amounted to 0.58 percent (0.45) at year-end.

Change in interest-bearing net receivables/net debt

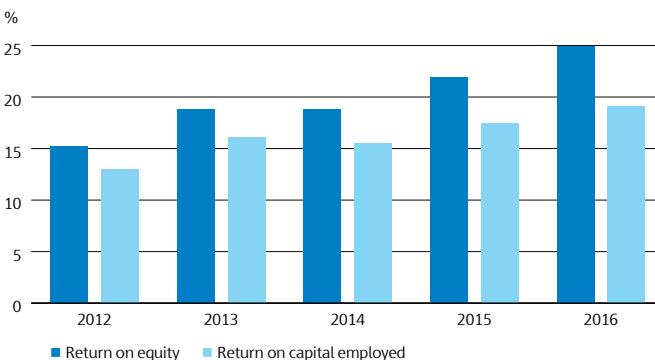

SEK M	2016	2015
Interest-bearing net receivables/net debt, January 1	6,317	698

Other changes	-219	-265
Interest-bearing net receivables/net debt, December 31	1,219	6,317
1 Of which repurchases of shares	-793	-416

The Group's interest-bearing liabilities and provisions increased to SEK 15,099 M (14,194), of which pension liabilities and provisions amounted to SEK 4,927 M (4,010) and construction loans to housing associations to SEK 4,839 M (3,761). The average interest rate refixing period for all interest-bearing liabilities was 0.6 (1.2) years, excluding pension liabilities but taking into account derivatives. The average maturity was 1.1 (1.5) years. Including unutilized credit facilities, the average maturity was 2.0 years.

The interest rate for all Group interest-bearing liabilities, excluding pension liabilities, amounted to 1.0 percent (1.22) at year-end. The percentage of loans in foreign currencies was 23 percent (21).

The Group's total assets increased by SEK 8.8 billion and amounted to SEK 106.5 billion (97.7). The effect of exchange rate fluctuations on total assets was SEK 3.2 billion.

Return on equity and capital employed

At the end of the year, equity attributable to equity holders amounted to SEK 27,350 M (24,079). Apart from comprehensive income for

the year of SEK 6,867 M, the change in equity is mainly explained by dividends of SEK -3,075 M, repurchases of shares totaling SEK -793 M and share-based payments in connection with long-term employee ownership programs (Seop) totaling SEK 272 M.

Return on equity increased to 24.9 percent (21.9).

Capital employed at year-end amounted to SEK 42,605 M (38,400). Return on capital employed amounted to 19.2 percent (17.4).

Equity/assets and debt/equity ratio

The net debt/equity ratio amounted to -0.0 (-0.3) and the equity/assets ratio to 25.8 percent (24.8).

Parent Company

The Parent Company carries out administrative tasks and includes the Senior Executive Team and management units.

Profit for the year amounted to SEK 3,429 M (2,390) and mainly consisted of dividends from subsidiaries. The average number of employees was 111 (108).

Material risks and uncertainties

Construction and project development operations involve risks and opportunities which must be managed in a systematic, consistent and efficient way to maximize both quality and profitability. Almost every project is unique, with size, design, schedule and commercial conditions varying to respond to the requirements, circumstances and environment the project is in. Construction and project development operations differ in this way from typical manufacturing industry, where companies have permanent facilities and serial production.

In Skanska's operations, there are many different types of risk. Identifying, managing and putting a price on these risks are of fundamental importance to profitability. The risks are normally of a technical or commercial nature but it is also important to consider the political, ethical, social and environmental aspects when assessing potential risks. Skanska works with a variety of commercial mechanisms and in many legal jurisdictions and the degree of risk can vary greatly depending the contractual set-up.

Project risk management at the operational level at Skanska is governed by the Operational Risk System. This system's philosophy is that the process of managing risks is an integral line management responsibility. This system details how Business Units should organize for risk management, and it serves as a roadmap to the suite of risk and opportunity management procedures, guidelines and templates.

The Skanska Tender Approval Procedure and Investment Approval Procedure control the level of authorization required for Construction and Project Development assignments. These procedures also guide project teams through a structured presentation of risks and opportunities, facilitating scrutiny and approval at the level required by the size and nature of the project.

In the Construction business stream, risk and opportunity are identified, assessed and priced during the project identification and bid phases and then actively monitored and managed through the design and execution phases. Typical risks encountered during a project's lifecycle include: sharp increases in prices of materials or construction services, especially in long projects with fixed-price commitments; shortages of human resources, or of certain intermediate goods; delays in the design phase or changes in design; delays in obtaining the required permits; adverse weather conditions; unexpected underground obstructions or utilities; unexpected

geotechnical conditions; defects in existing structures or work undertaken by other contractors.

Another important area of risk management is that counterparties, for example clients, partners, subcontractors or suppliers, may have difficulty living up to their contractual obligations. Skanska regularly makes assessments of counterparty risk in order to be prepared for this.

In the Residential Development business stream, there are risks in all phases – from concept to completed project. External factors such as interest rates, customers' financial security and their willingness to buy homes are of crucial importance to all decisions made. Homes are produced for successive sale. To minimize risks, the goal is to completely develop and sell the units in a given project during a single economic cycle when variations in market conditions are small and more predictable.

Greater standardization with shorter lead times reduces exposure to the risk of fluctuation in market demand. Due to lengthy planning and permitting processes, ample lead time is required to ensure a supply of land and building rights for construction in order to meet the demand during favorable market conditions. Equally, it is important to be ready to scale down or stop production when market conditions are less favorable. New projects are normally started when a predetermined percentage of homes are sold or pre-booked, and large projects are divided into multiple phases.

Commercial Property Development manages risks connected with external factors, clients' space needs and the willingness of investors to buy. Through frequent contact with clients and investors,

Skanska constantly tracks demand for premises and completed projects.

Risks are limited because the Commercial Property Development and Residential Development business streams have established limits on how much capital may be tied up in holdings in projects that have not been pre-leased or sold. There are also restrictions on how much may be employed that are broken down per Business Unit.

Investments in Infrastructure Development require effective and efficient risk management throughout the project lifecycle, which may be up to 50 years or even longer. This begins during the development phase, both before and after contractual and financial close.

During the construction phase the greatest risk is that the asset will not be ready to go into service on schedule. Depending on the type of asset, there are risks during the entire steady state phase, which may extend over decades. Examples of such risks are external factors – political, demographic, environmental and financial – which are managed during the service life of a project. There is also a risk that life-cycle or operating and maintenance costs will exceed the forecasts that were made.

For a more detailed account of material risks and uncertainties, see Note 2 Key estimates and judgments. Financial risks are described in Note 6 Financial instruments and financial risk management. Significant ongoing litigation is described in Note 33 Assets pledged, contingent liabilities and contingent assets.

Corporate governance report

This corporate governance report for 2016 has been reviewed by the company's external auditors in compliance with Chapter 9, Section 31 of the Swedish Companies Act.

The report is part of the Report of the Directors and contains information as required by Chapter 6, Section 6 of the Annual Accounts Act.

Corporate governance principles

Skanska AB is a Swedish public limited company. Skanska AB's Series B shares are listed on Nasdaq Stockholm. Skanska AB and the Skanska Group are governed according to the Articles of Association, the Swedish Companies Act, the Nasdaq Stockholm Rule Book for Issuers and other applicable Swedish and foreign laws and ordinances.

Skanska applies the Swedish Corporate Governance Code ("the Code") which is available at www.corporategovernanceboard.se.

Articles of Association

The Articles of Association are adopted by the Annual General Meeting – the highest decision-making body – and are required to contain a number of mandatory disclosures of a more fundamental nature for the company. These include what operations it is to conduct, the size and registered office of the Board of Directors, the size of the share capital, any regulations on different types of shares (Series A and Series B shares), conversion of shares, number of shares and how notice of a shareholders' meeting is to be provided. The complete Articles of Association are available on Skanska's website www.group.skanska.com.

Governing documents

Among the more important governing documents established yearly by the Board are the Code of Conduct, the Procedural Rules, the Financial Policy, the Information Policy and the Risk Management Policy. The Code of Conduct is available on Skanska's website www.group.skanska.com.

Annual General Meeting

At the Annual General Meeting (AGM) Skanska's shareholders decide on key issues, such as adoption of income statements and balance sheets, dividend to the shareholders, the composition of the Board of Directors, discharging the members of the Board and the President and CEO from liability, amendments to the Articles of Association, election of auditors and principles for remuneration to senior executives. Shareholders listed in the register of shareholders on the record date who notify the company of their intention to participate in the meeting are entitled to attend it either personally or by proxy through a representative or substitute.

Every shareholder is entitled to have an item of business dealt with at the AGM. Well before notice of the meeting is issued, the company's website provides information on how shareholders are to proceed in order to have items of business dealt with.

The 2016 Annual General Meeting

The Annual General Meeting was held on April 6, 2016 in Stockholm. At the AGM, a total of 987 shareholders were present in person or by proxy, representing about 60 percent of the total voting power in the company. The AGM re-elected Johan Karlström, Fredrik Lundberg, Charlotte Strömberg, Pär Boman, Jayne McGivern,

John Carrig and Nina Linander as members of the Board, and elected Hans Biörck as a new member. The members of the Board were elected on an individual basis.

The AGM elected Hans Biörck as Chairman of the Board. Employees were represented on the Board by Richard Hörstedt, Lennart Karlsson and Gunnar Larsson as members, with Pär-Olow Johansson and Thomas Larsson as deputy members. Twelve members and deputy members of the Board as well as the company's auditors and members of the Senior Executive Team were present at the AGM. The AGM elected Ernst & Young AB as auditor.

Among other things, the AGM approved a dividend to the shareholders totaling SEK 7.50 per share. In addition, the AGM resolved to implement a new employee ownership program for Skanska employees, Seop 4, for the period 2017-2019. Complete information about the 2016 Annual General Meeting and the minutes of the meeting are available on Skanska's website.

The 2017 Annual General Meeting

The next Annual General Meeting of Skanska AB will be held at 10:00 a.m. on April 4, 2017 at the Stockholm Waterfront Congress Centre in Stockholm, Sweden.

On Skanska's website information has been provided to shareholders on how they should proceed if they wish to have an item of business dealt with at the 2017 AGM.

The Nomination Committee

One of the tasks of the Nomination Committee is to propose candidates for election as members of the Board of Directors.

The 2013 Annual General Meeting gave the Chairman of the Board a mandate, ahead of each AGM, to allow each of the four largest shareholders in terms of voting power to appoint a representative to join the Chairman on the Nomination Committee. The Nomination Committee for the 2017 Annual General Meeting has the following composition: Helena Stjernholm, AB Industrivärden, Chairman of the Nomination Committee; Mats Guldbrand, LE Lundbergföretagen AB; Bo Selling, Alecta; Hans Ek, SEB Funds & SEB Trygg Life Insurance; and Hans Biörck, Chairman of the Board, Skanska AB.

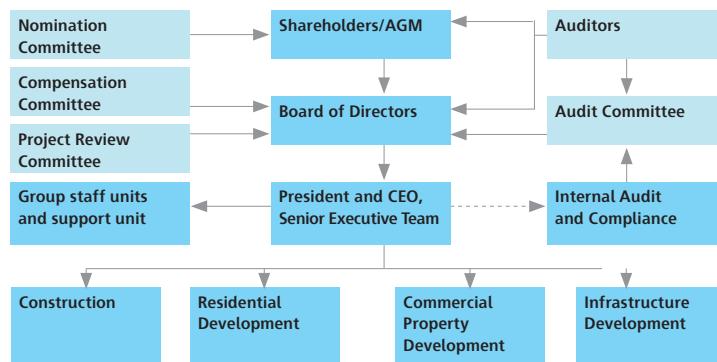

Information has been provided on Skanska's website on how shareholders can e-mail proposals to the Nomination Committee. The Nomination Committee will publish its proposal on February 23, in conjunction with the notice of the 2017 Annual General Meeting. These proposals and an explanatory statement will be available on Skanska's website.

The Nomination Committee applies the rules on the composition of the Board of Directors that are found in the Code, including the rule on diversity.

Nomination Committee 2016

The Board of Directors

The Board of Directors makes decisions concerning overall issues relating to the Parent Company and the Group, such as the Group's strategy, publication of interim and annual reports, major construction projects, investments and divestments, appointment of the President and CEO and the organizational structure of the Group. The Board has established three special committees:

- Audit Committee
- Compensation Committee
- Project Review Committee

The members of the Board

The Board of Directors consists of eight members elected by the Annual General Meeting, without deputies, plus three members and two deputy members appointed by the employees. The Annual

General Meeting appointed Hans Biörck as Chairman of the Board. The President and CEO is a member of the Board. For more detailed information about individual Board members and deputy members, see page 172.

Six of the Board members elected by the Annual General Meeting are independent in relation to the company and its management. Of these, three members are also independent in relation to the company's largest shareholders. Only one Board member (the President and CEO) is actively involved in the management of the company.

The work of the Board in 2016

The work of the Board of Directors follows an annual agenda established in the Board's Procedural Rules. In preparation for each Board meeting, the Board receives reports and documentation compiled according to established procedures. The purpose of these

procedures is to ensure that, in advance of all Board meetings, the Board receives the relevant information and documentation on which to base decisions. All documentation is drafted in English. In 2016 the Board held eight meetings including its statutory meeting, one of which was held by circulation. For the September 2016 meeting the Board visited Skanska's operations in Gothenburg together with the management team of Skanska Sweden, Skanska Commercial Property Development Nordic and BoKlok. In conjunction with the meeting site visits were made to the projects Marieholmsbron, Park 49 and Tändstickan in Gothenburg.

The more important issues dealt with by the Board during the year included updating and monitoring operations, writedowns on construction projects in Poland, monitoring and updating the Group's business plan for 2016–2020, the adoption of a new Code of Conduct for the Group, reviewing the company's anti-corruption measures, updates on the investigations relating to the Czech Republic and Brazil, succession planning for the CEO, the other members of SET and Business Unit Presidents, internal control and risk management. An important emphasis was safety and sustainability.

The Board's committees

In its Procedural Rules, the Board has specified the duties and decision-making powers delegated by the Board to its committees. All committees report orally to the Board at each meeting in accordance with the routines stipulated in the Procedural Rules. Minutes of all committee meetings are provided to the Board.

Audit Committee

The main task of the Audit Committee is to assist the Board in overseeing financial reporting, reporting procedures and accounting principles, and to monitor the auditing of the accounts for the Parent Company and the Group. The Committee also evaluates the quality of the Group's reporting, internal auditing and risk management, and reviews the reports and conclusions of the company's external auditors. The Committee monitors the external auditors' assessment of their impartiality and independence, and that there are procedures for which non-audit services they provide to the Parent Company and the Group. The Committee also monitors compliance with the rules on auditor rotation. The external auditors are present at all Audit Committee meetings. At least once a year the Audit Committee meets the auditors without senior executives being present. The Committee consists of Charlotte Strömberg (Chairman), Hans Biörck, John Carrig, Nina Linander and Pär Boman. The Committee held six meetings in 2016. Important matters addressed during the year included capital allocation, financing, pension reporting, external reporting, implementation of the ERP systems, IT strategy and security, writedowns on construction projects in Poland, larger disputes, risk management, compliance and reporting of suspected Code of Conduct breaches.

Compensation Committee

The main task of the Compensation Committee is to prepare recommendations for Board decisions on the appointment of the President and CEO and other Senior Executive Team members, and on the salary and other remuneration for the President and CEO. The Committee makes decisions on remuneration, pensions and other terms of employment for other members of the Senior Executive Team.

The Committee prepares recommendations for Board decisions on general incentive programs and examines the outcomes of variable salary components. In 2016, the Committee updated the employment agreements for executives, reviewed executives' other assignments, evaluated Skanska's variable remuneration programs for the Senior Executive Team, and monitored and evaluated the application of the principles for remuneration to senior executives as well as the existing remuneration structure and remuneration levels.

The Committee consists of Hans Biörck (Chairman), John Carrig and Charlotte Strömberg. The Committee held seven meetings in 2016.

Project Review Committee

The Project Review Committee has the Board's mandate to make decisions on its behalf regarding individual projects within the Construction, Commercial Property Development and Residential Development business streams, investments and divestments within Infrastructure Development and certain project financing packages. Projects that involve especially high or unusual risks or other special circumstances may be referred to the Board for a decision. The Project Review Committee consists of Hans Biörck (Chairman), John Carrig, Johan Karlström, Fredrik Lundberg, Nina Linander, Charlotte Strömberg, Pär Boman, Jayne McGivern and Richard Hörstedt. The Committee held twelve meetings in 2016.

Evaluation of the work of the Board

The work of the Board is evaluated yearly through a systematic and structured process aimed, among other things, at gathering good information as a basis for improving the Board's work processes. The evaluation provides the Chairman of the Board with information on how the members of the Board perceive the effectiveness and collective competence of the Board as well as the need for changes. In 2016 the evaluation was carried out partly through individual questionnaires and through individual conversations between the Chairman and each member, and partly through discussions at Board meetings. Evaluation of the work of the Chairman is led by a designated member. The Chairman is also evaluated by all the other members in a written questionnaire. The Chairman of the Board gives the Nomination Committee feedback on the evaluation at a meeting where the results of the questionnaire and the Board discussions are presented

Fees to the Board of Directors

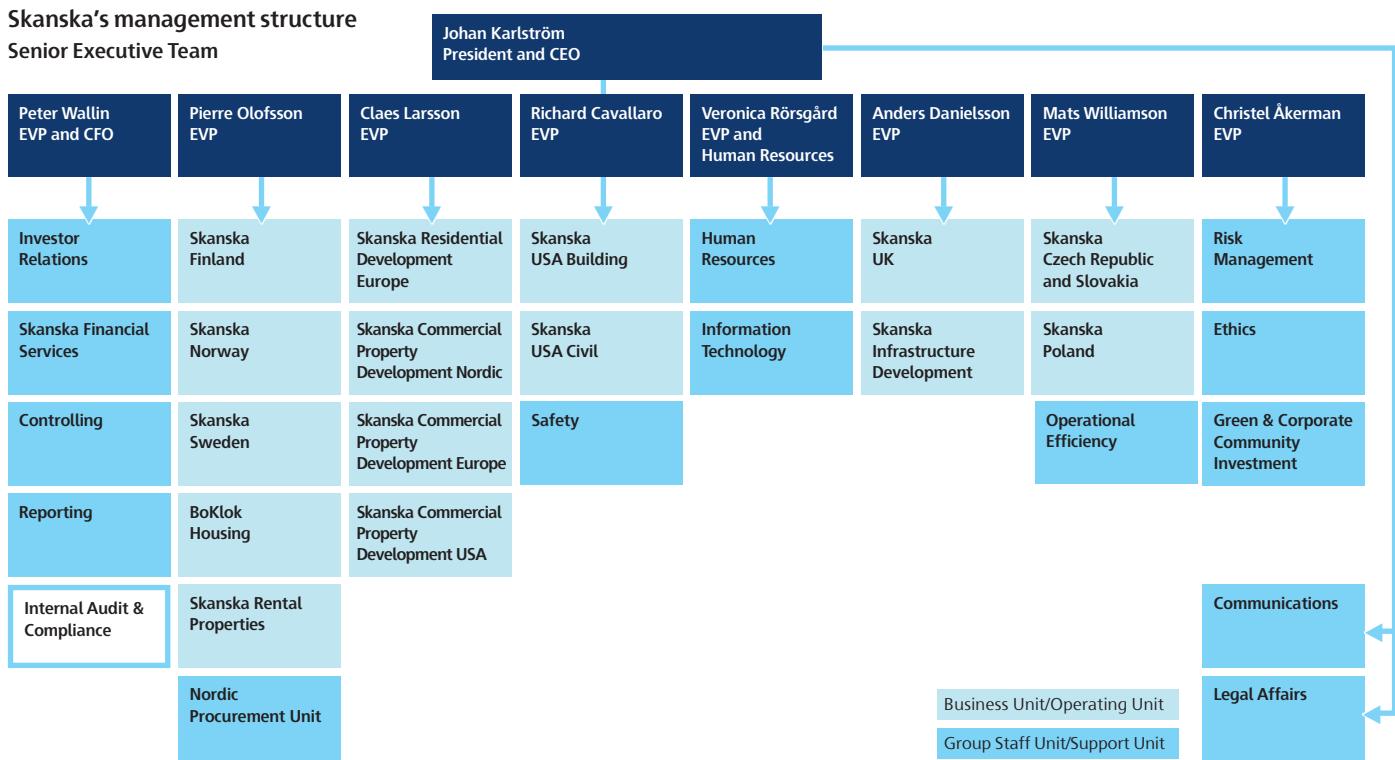

Total fees to the Board members elected by the Annual General Meeting were approved by the 2016 AGM in the amount of SEK 8,485,000.

The Chairman of the Board received SEK 1,995,000 in fees and other Board members received SEK 665,000 each.

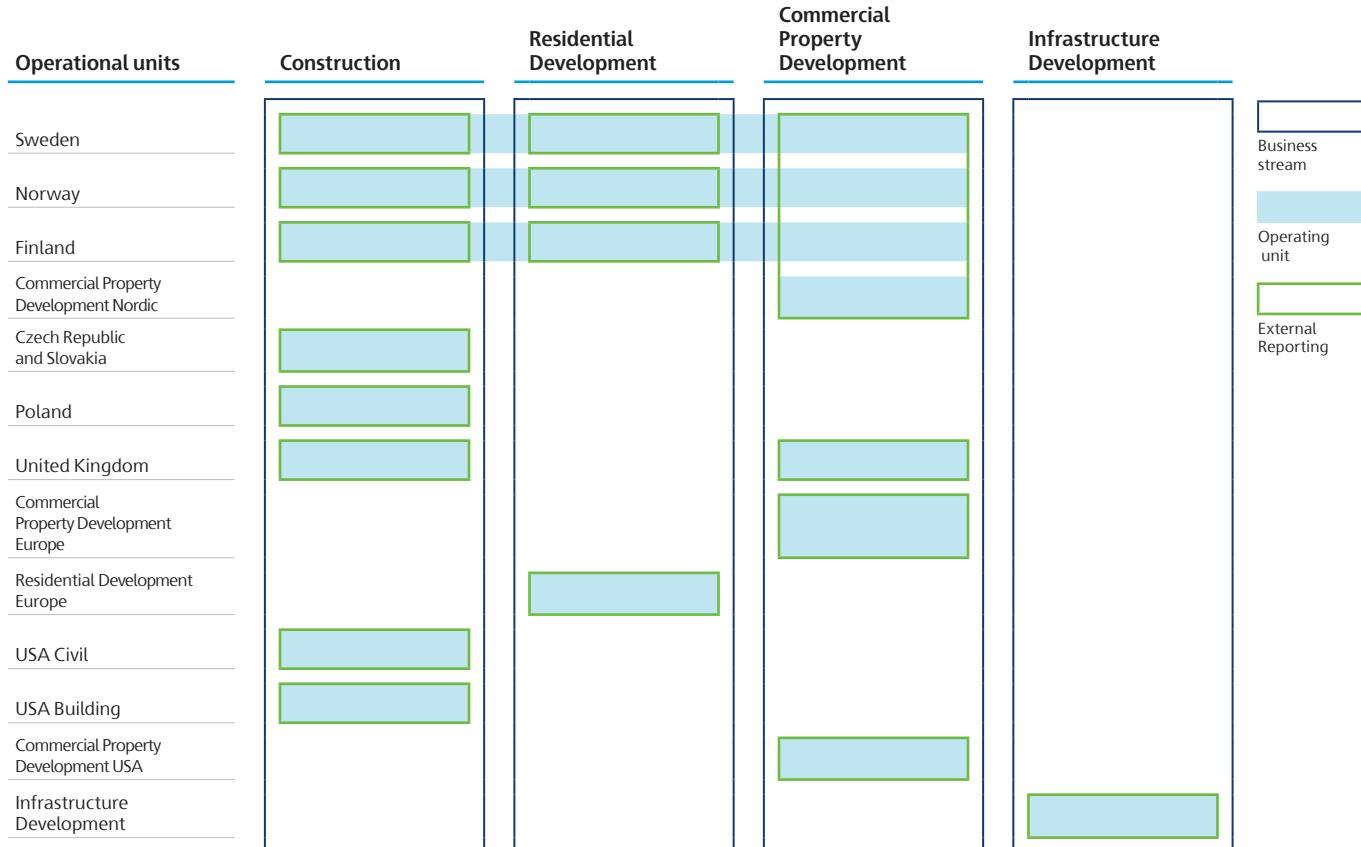

In accordance with a decision by the AGM, members elected by the AGM and serving on Board committees received an additional SEK 100,000 for work on the Compensation Committee, SEK 200,000 for work on the Project Review Committee and SEK 150,000 for work on the Audit Committee, while SEK 200,000 was paid to the Chairman of the Audit Committee. For more detailed information, see Note 37, "Remuneration to senior executives and Board members."

1 From April 6, 2016.

2 From January 1, 2016.

The Board's communication with the company's auditors

As mentioned above, the company's external auditors participate in all meetings of the Audit Committee. According to its Procedural Rules, the Board of Directors meets with the auditors three times a year. On these occasions, the auditors orally present their audit findings. At least once a year, the Board meets the auditors without senior executives being present.

Operational management and internal control

The President and CEO and the Senior Executive Team

The President and Chief Executive Officer (CEO) is responsible for day-to-day management and oversight of the company's operations. The work of the President and CEO is evaluated at one Board meeting each year at which no senior executives are present. The President and CEO and the eight Executive Vice Presidents form the Senior Executive Team (SET). The Company's Procedural Rules stipulate that the Chief Financial Officer (CFO) will take over if the President and CEO cannot fulfill his or her duties. If the CFO cannot take over, the Executive Vice President with the longest period of service in this position will take over instead. Information on the President and CEO and the members of the Senior Executive Team can be found on page 170. The President and CEO has no business dealings of any significance with Skanska AB or its Group companies.

Corporate departments and support unit

Corporate departments and the support unit, Skanska Financial Services AB, are based at the Group headquarters in Stockholm. The corporate departments and support unit assist the President and CEO and the Senior Executive Team on matters relating to corporate functions, coordination and oversight. They also provide support to the business units. The head of each corporate department reports directly to a member of the Senior Executive Team. In addition, the head of the Internal Audit and Compliance unit reports directly to the Board by way of the Audit Committee. A presentation of the corporate departments and the support unit can be found on page 171.

The business units and their governance

The Skanska Group has a clearly decentralized structure characterized by a large measure of delegation of authority and responsibility to the business units. Each business unit is headed by a president and has its own administrative departments and other resources in order to conduct its operations effectively.

Aside from day-to-day operations, the business units deal with matters such as their strategic development, and strategic investments and divestments. Proposals are prepared by the management team of each respective unit and then referred to the Senior Executive Team or to Skanska AB's Board of Directors for a decision, depending on the magnitude of the matter. The boards of the business units consist of representatives from Skanska AB, individuals from other business units and the respective business unit's own management team. The Chairman of each business unit is a member of Skanska's Senior Executive Team. Where appropriate, employee representatives are included.

Each business unit follows a structured, step-by-step risk management process. Depending, among other things, on the size, type and geographic location of projects, a structured risk management report may be required to be submitted to a higher decision-making level before final decisions are made.

In addition to the Board's governing documents, the Senior Executive Team has adopted more detailed guidelines for the Group. These policies and guidelines are available to all business units on Skanska's intranet and are updated regularly to reflect changes in operations and new requirements. The Board's Procedural Rules state which items of business will be decided upon by the Board of Skanska AB, by the President and CEO/Senior Executive Team or at the business unit level. The thresholds for decision authority stipulated in the Procedural Rules are further broken down in the business units' own decision authority rules. The business units provide regular, systematic feedback to the Senior Executive Team on compliance with the more important governing documents, such as the Financial Policy and the Code of Conduct.

Remuneration to the Senior Executive Team

The 2016 Annual General Meeting approved principles for salaries and other remuneration to senior executives. These principles, as well as the Board's proposal for new principles to be approved at the 2017 Annual General Meeting, are presented on page 70. Information about salaries and other remuneration to the President and CEO and other members of the Senior Executive Team, as well as outstanding share award and share-related incentive programs, are found in Note 37.

The Company's auditors

The 2016 Annual General Meeting elected the accounting firm Ernst & Young AB as auditor of Skanska AB. This assignment is in effect until the 2017 Annual General Meeting. The auditor in charge is Authorized Public Accountant Hamish Mabon. For information on fees and other remuneration to auditors, see the table below.

Fees and other remuneration to auditors

Internal control

This description has been prepared in compliance with Chapter 6, Section 6, Paragraph 2 of the Annual Accounts Act and includes the most important elements of the company's internal control and risk management systems in connection with financial reporting.

Control environment

The Board's Procedural Rules and instructions for the President and CEO and the Board's committees ensure a clear division of roles and responsibilities for the purpose of ensuring effective management of business risk. The Board has also adopted a number of fundamental rules of importance for internal control work. Examples of these are the company's Risk Management Policy, Financial Policy and Code of Conduct. The Senior Executive Team reports regularly to the Board according to established procedures. The Audit Committee also presents reports on its work. The Senior Executive Team is responsible for the system of internal controls required to manage material operational risks. This includes providing instructions to people in various positions in order to maintain good internal control.

Risk assessment and control activities

Skanska has identified the material risks in its operations that may, if not managed correctly, lead to errors in financial reporting and/or have an impact on the company's results. The company has subsequently ensured that the Group has rules in place to monitor that these risks are managed. The Senior Executive Team and the corporate departments are responsible for managing general risks relating to strategy, macroeconomics and regulatory frameworks, while the main tasks relating to operational risks and opportunities are carried out at the local level within the Business Units.

Risks and opportunities for improvements are both greatest during the actual execution phase of the projects, and thus the work focuses heavily on this phase. Since almost every project is unique, risks and opportunities must be analyzed with respect to project type, location, implementation phase and client.

Skanska uses a Group-wide procedure for identifying and managing risks associated with construction contracts, projects and investments. A specialist unit, the Skanska Risk Team (SRT), examines and analyzes projects and investments above a certain size. The proposals are then processed by the Skanska Risk Team, which issues a recommendation. The final decision on tenders or investments is made by the SET Tender Board, which consists of Skanska's Senior Executive Team, and in certain cases, by the Board of Directors through the Project Review Committee.

The company considers the greatest risks that the Group faces to be the following matters:

- Ethical breach
- Lack or loss of key employees
- Project or systemic losses
- Macro financial instability
- Accident with multiple people affected

A more detailed description of the risks and how they are managed is found on pages 16–18.

Information and communication

Significant accounting principles, manuals and other documents of importance in financial reporting are updated and information on them communicated regularly to the relevant employees. There are several information channels to the Senior Executive Team and the Board of Directors for important information from employees. For its external communication, the Group has an Information Policy to ensure that the company meets the existing criteria for providing the market with accurate information.

Monitoring

The Board of Directors continually evaluates the information provided by the Senior Executive Team and the Audit Committee. Of particular importance is the Audit Committee's work in compliance with Chapter 8, Section 49b of the Swedish Companies Act on monitoring the effectiveness of the Senior Executive Team's internal control processes.

This includes ensuring that steps are taken to address the shortcomings revealed in internal and external audits and to implement the proposed actions.

Internal Audit

The Internal Audit and Compliance unit is responsible for monitoring and evaluating risk management and internal control processes. This includes examining compliance with Skanska's principles. The unit reports directly to the Board of Directors by way of the Audit Committee. The Internal Audit and Compliance unit plans its work in consultation with the Audit Committee and regularly reports its examination findings to the Committee. The unit communicates continuously with Skanska's external auditors on matters concerning internal control.

In 2016 the Internal Audit and Compliance unit focused on reviewing the risks identified in the business. These reviews were conducted for projects, business-critical processes and corporate departments. In total around 135 audits were conducted during the year in all business units. There was a particular focus on the operations in Poland and the U.S. The audits were performed in accordance with a uniform audit method.

Other mandatory disclosures in compliance with Chapter 6, Section 6 of the Annual Accounts Act

Due to the requirements in Chapter 6, Section 6 of the Annual Accounts Act concerning certain mandatory disclosures in corporate governance reports, the following is disclosed:

- Of the company's shareholders, AB Industrivärden and Lundbergs have a direct or indirect shareholding that represents at least one tenth of the voting power of all shares in the company. On December 31, 2016, Industrivärden's holding amounted to 23.9 percent of the total voting power and Lundbergs to 12.3 percent of total voting power.
- There are no restrictions on the number of votes each shareholder may cast at an Annual General Meeting.
- The Articles of Association state that the appointment of Board members is to take place at the company's Annual General Meeting. The Articles of Association contain no stipulations on dismissal of Board members or on amendments to the Articles of Association.

- The 2016 Annual General Meeting authorized the Board of Directors to decide on acquisitions of Skanska's Series B shares through a regulated market on the following conditions:
 - A. Acquisitions of Series B shares in Skanska may only be effected on Nasdaq Stockholm.
 - B. The authorization may be exercised on one or several occasions, however at the latest until the Annual General Meeting 2017.
 - C. No more than 4,000,000 Series B shares in Skanska may be acquired to secure delivery of shares to participants in the long-term share savings program (Seop 3) and for subsequent transfers on a regulated market in order to cover certain costs associated with Seop 3.
 - D. Acquisitions of Series B shares in Skanska on Nasdaq Stockholm may only be made at a price within the from time to time applicable range of prices (spread) on Nasdaq Stockholm, meaning the interval between the highest purchase price and the lowest selling price.
- The 2016 Annual General Meeting also authorized the Board of Directors to decide on acquisitions of Skanska's Series B shares through a regulated market on the following conditions:
 - A. Acquisitions of Series B shares in Skanska may only be effected on Nasdaq Stockholm.
 - B. The authorization may be exercised on one or several occasions, however at the latest until the Annual General Meeting 2017.
 - C. No more than 1,500,000 Series B shares in Skanska may be acquired to secure delivery of shares to participants in the long-term share savings program Seop 4 and for subsequent transfers on a regulated market in order to cover certain costs associated with Seop 4, mainly social security costs.
 - D. Acquisitions of Series B shares in Skanska on Nasdaq Stockholm may only be made at a price within the from time to time applicable range of prices (spread) on Nasdaq Stockholm, meaning the interval between the highest purchase price and the lowest selling price.

Research and development

The Research & Innovation function is the corporate hub for technical expertise and technical knowledge transfer between the various Skanska units.

It provides technical input to Skanska's risk management process in order to reduce risk in relation to complex structures, potential systemic faults and the use of new materials. It also provides technical support for problem solving and claims resolution, working through a coordinated internal and external network of experts.

In addition, the function leads the research and innovation activities in Skanska, striving to find new technical solutions and also more efficient ways of working. Innovation is needed in order to respond to current and future needs and to stay competitive.

Through innovation Skanska identifies and develops new technical products, services and processes, improving its competitiveness and creating increased value for Skanska and its clients.

Disclosures required in compliance with Chapter 6, Section 2a of the Annual Accounts Act

Disclosures in compliance with Chapter 6, Section 2a of the Annual Accounts Act concerning information about certain circumstances that may affect the possibility of a takeover of the company through a public bid for the shares in the company are provided in Note 64, Disclosures in compliance with the Annual Accounts Act, Chapter 6, Section 2a.

A large part of the year's work focused on supporting Skanska's 2016–2020 business plan with technology, particularly in the area of Operational Excellence. During 2016, technical focus areas within Skanska included Building Information Modeling (BIM), automation and robotics, autonomous vehicles, industrialization, materials, drones, 3D printing, energy, energy storage as well as other focus areas such as climate change, sustainability and safety.

Skanska actively collaborates with around 25 universities in its home markets and currently has six adjunct professors working in the areas of energy, concrete, tunneling, bridges and climate adaption.

Focus areas within sustainability

Skanska's sustainability agenda consists of five focus areas: Safety, Ethics, Green, Corporate Community Investment and Diversity & Inclusion. These focus areas were identified as the sustainability areas Skanska has the greatest influence on, and the company aspires to be an industry leader in each of the areas. Skanska's 2020 Business Plan – Profit with Purpose – aims to create value for shareholders while also building for a better society. The five pillars embody Skanska's purpose and ensure that its sustainability efforts transcend the entire company.

Safety

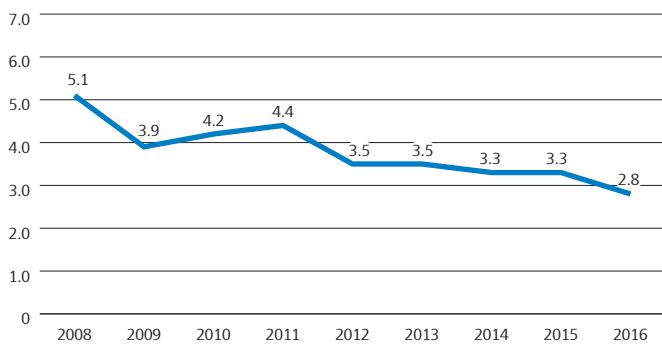

Safety performance

Skanska continues to improve its safety management, with all Business Units implementing the strategic safety action plans developed as part of the 2020 Business Plan. However, these improvements have yet to significantly improve injury rates.

Skanska's lost-time accident rate declined in 2016 compared to 2015; the 2016 lost-time accident rate was 2.8 (3.3), with a total of 638 lost-time accidents. The injury rate that includes restricted duty cases was 4.7, down from 5.0 in 2015. In total, 1,058 injuries prevented people from returning to their normal work activities.

Lost Time Accident Rate (LTAR) 2008–2016

Number of employee lost time accidents times 1,000,000 hours divided by total labor hours. Inclusive of Skanska employees plus contractors working on Skanska jobsites.

Skanska believes that all injuries must be eliminated. With this in mind, the Group has changed the emphasis of its internal reporting to focus on all injuries sustained at the workplace – not just those injuries resulting in lost time from work, as traditionally tracked in the construction industry.

During 2016, there were four work-related fatalities on Skanska worksites: in Poland, Peru and the U.S. All of these are tragic events for the families, friends and colleagues of the deceased. Following each fatality, Skanska held a Global Safety Stand Down at every workplace to share learnings from the accidents with colleagues, and to pay respect.

Skanska treats potential fatality events, even if no one was hurt, as serious incidents involving investigations and follow-up. These provide a learning opportunity to revise and improve the systems, organization and leadership skills to avoid future accidents.

Health and well-being

Skanska's Care for Life value was the catalyst for the Group in 2016 to begin developing a Health and Well-being Strategy for all Business Units. The strategy is based on ensuring a healthy workplace, with workers who are physically and mentally fit so they can perform at their best. This includes providing improved direction on reducing long-term health hazards, such as from noise, dust and poor ergonomics. The intent is to prevent work activities from causing or worsening ill health, both physical and mental.

Furthermore, the Health and Well-being Strategy will offer employees guidance and information to enable better lifestyle choices with diet, alcohol, smoking and more. The strategy recognizes that lifestyle decisions are matters of personal choice. This strategy will launch during 2017, building upon initiatives of several Business Units.

Skanska is committed to giving health and well-being the same priority as safety. Health and well-being topics will be included in an extended version of the Safety Road Map, the framework around which Skanska management teams plan their safety improvement programs. This will enable each part of Skanska to develop local action plans.

A learning organization

In keeping with the Be Better – Together value, Skanska continues to develop the various ways it internally shares information and knowledge. Primarily these are the networks of the Global Safety Leadership Team, which advises the Senior Executive Team; the Safety Performance Network, comprised of Business Unit heads of safety; and the use of digital platforms. These are aimed at developing networks that can leverage similarities to improve safety, health and well-being.

In 2016, Skanska's four Business Units in Central Europe formed a cluster to develop common health and safety standards, and to share best practices; a similar cluster has been formed in the Nordic countries.

Other examples of learning activities used in various Business Units in 2016 include:

- Continuation of the safety peer review program that provides Business Unit managers with additional perspectives on safety management. This involves bringing line managers and safety experts from other Business Units to observe projects and provide advice.
- Holding "Stand up for safety" sessions that facilitate sharing of good practices.
- Conducting safety days, during which jobsite managers and work crews come together to discuss and solve safety issues.
- Exploring the use of wearable technology to aid injury identification and improve ergonomics.
- Engaging with employees and subcontractors through in-depth safety perception surveys. These surveys provide valuable information about how safety programs are perceived by employees and contractors; the feedback is used to develop new action plans.

Additionally, in 2016 Skanska updated and strengthened its Global Safety Standards, which are requirements that go beyond laws and industry norms. New standards were added for safe delivery of materials, temporary electrical systems and safety audits. These standards – which now total 12 – form a key part of establishing Skanska's minimum expected safety behaviors. The 2016 updates will drive further improvements.

Safety Week

The 12th annual Skanska Safety Week occurred in April 2016. The overarching theme was “Plan for today,” which recognizes that planning is key to reducing accidents in the dynamic settings found on construction sites. In the U.S., Poland and Finland, Safety Week has become an industry-wide event that demonstrates to hundreds of thousands of workers the critical importance of working safely. Customers, peer companies, suppliers and regulating authorities all take part.

Ethics

In 2016, Skanska took key steps to further its strong ethical culture, which is central to living the Act Ethically and Transparently value. Two highlights were launching a bold new Code of Conduct and Skanska’s first-ever Supplier Code of Conduct. The Code of Conduct can be viewed at codeofconduct.skanska.com.

Developing the Code of Conduct provided an opportunity to review and improve everything associated with the Code. This included updating policies; refining risk assessment processes; revising training requirements to suit risks associated with particular roles and functions; and redefining the areas of assurance reviews and audits. Among the policies strengthened was that which prevents retaliation of any type against employees who report legitimate ethical concerns, and the policy stating Skanska does not tolerate corruption in any form.

Recognizing it will take time to fully implement new processes and procedures, Skanska has prioritized the activities for implementation using a risk-based approach. This comprehensive approach helps proactively reduce the chance of an ethical breach, one of Skanska’s major risks.

New Code of Conduct

The new Code of Conduct applies to all employees: temporary, part-time, full-time and contract. Also, all employees must be trained on the Code by January 1, 2018, and then retrained every two years. New employees must be trained within one month of beginning employment.

The launch of the Code included an app for mobile devices that helps make accessing and searching the Code easy for employees. The app was pushed out to more than 20,000 mobile devices used by Skanska employees.

Consistency across the Group

Each year every unit develops an ethics plan to identify key risks, challenges and activities to help achieve Skanska’s target of being an ethics leader. The units continued that work in 2016, with emphasis on risks, goals, and specific action plans. The ethics plans address strengths as well as opportunities for the units, based on input from the Ethics Scorecard, employee survey results, and reports of alleged misconduct during the past year. These ethics plans are reviewed by the Skanska AB Ethics Committee to ensure that the plans are appropriate, set a framework to a stronger ethical culture and are aligned with the 2020 Profit with Purpose Business Plan.

As in 2015, each Skanska unit participated in a mid-year peer review of its ethics plan and progress on action items. The units also continued to submit quarterly reports to the Skanska AB Ethics Committee. A summary of the quarterly reports was submitted to and discussed with the Board of Directors’ Audit Committee during 2016.

Ethics organization

The Global Ethics Network – comprised of representatives from each Business unit – held four meetings in 2016 to share best practices and overall increase ethics competencies across the Group.

Additionally, Group Support Unit Ethics added two staff members: an Ethics Manager and a Compliance Manager. The Ethics Manager came from one of the Skanska Project Development units, which will be especially helpful as the development units are becoming a larger part of Skanska under the 2020 Business Plan. The Compliance Manager will work closely with the Business units regarding risk assessments and due diligence, as well as monitoring external parties – with particular emphasis on joint venture partners and intermediaries.

External parties

The focus on business partners and other external representatives of Skanska took significant steps forward during 2016. Skanska introduced its first-ever Supplier Code of Conduct, intended for external parties that are contracted to provide goods and/or services to Skanska. The Supplier Code includes topics from the full Code of Conduct that are relevant to Skanska’s supply chain.

Skanska began a more formal process to consistently conduct due diligence on every joint venture partner. Also, the Group introduced a comparable due diligence process for intermediaries, such as leasing agents and others who represent Skanska. The intent of this due diligence is to ensure that Skanska’s values are upheld in all business conducted on the Group’s behalf. Skanska will not compromise its values for any entity, person or business opportunity.

Reports of alleged misconduct

In 2016, Skanska received 88 reports via its Code of Conduct hotline, which allows employees to anonymously report suspected misconduct or anything that could be considered a breach of the Code. This compares to 64 reports in 2015. Skanska favorably interprets an increased number of reports as an indication that employees are recognizing their responsibility to report misconduct, and that employees feel Skanska’s culture empowers them to speak up.

Through the use of anonymized cases and developing ethical dilemma discussions based on actual scenarios, Skanska will continue to strengthen its ethical culture.

Value Moments Library

Skanska introduced the Value Moments Library, a collection of short films with an important purpose: encouraging and guiding employee conversations about how to best navigate dilemmas involving living the Group’s values. The films depict real-life examples gathered from employees in various roles, home markets and units, and many of them focus on situations in which two or more values are competing. This library will grow over time, with additional contributions from the Business Units.

Green

Skanska's Journey to Deep Green™

Skanska strives to develop and construct buildings and infrastructure that have near-zero environmental impacts during construction and operation. This is the target of the Journey to Deep Green™, which Skanska is reaching for in collaboration with its customers and supply chain. The Color Palette™, Skanska's green strategic tool, defines Deep Green according to energy, carbon, materials and water criteria – these are the environmental aspects the Group's projects influence the most.

Each Business Unit uses The Color Palette™ to report green revenue, and each unit has an environmental plan fully integrated with its business to increase both green performance and operational efficiency.

Since Bentley Works was transformed into a healthy facility that meets Deep Green criteria, sick leave has been reduced by two-thirds while employee comfort and satisfaction has increased.

Improving well-being and productivity through healthy offices

Skanska is focused on creating healthy offices that improve well-being and productivity. In 2016, the Group supported the World Green Building Council's "Building the Business Case" report, which links building design to the health, well-being and productivity of occupants.

The Building the Business Case report features Skanska's Bentley Works facility in Doncaster, UK: since the facility was redeveloped to Deep Green criteria, sick leave has been reduced by two-thirds while employee comfort and satisfaction has increased. Lower absenteeism costs provide a significant annual savings that reduces the green payback period of the refurbishment project from 11 years to eight years. Bentley Works demonstrates the many benefits from healthy offices.

The full World Green Building Council report can be found at betterplacesforpeople.org.

Skanska believes it is important that infrastructure – not just buildings – achieve green certification to measure and guide environmental achievements. Skanska has a key role in developing the next version of the Envision green infrastructure rating system.

Helping set the standard for green infrastructure certification

Skanska believes it is important that infrastructure – not just buildings – achieve green certification to measure and guide environmental achievements. In 2016, several of the Group's projects achieved major milestones under the two leading green infrastructure rating systems: CEEQUAL and Envision.

At the CEEQUAL Outstanding Achievement Awards, the Borough Viaduct project in London received two honors: for minimizing disruption and for retaining a historic urban neighborhood. Also, the Spårväg City Line 7 Accessibility Upgrade Part 1 in Stockholm was "highly commended" in the Project Management category.

In the U.S., the Expo Line Phase 2 light rail expansion in Los Angeles became the first transit project certified under Envision. Furthermore, it was certified at the highest level – Platinum. Also, Skanska's I-4 Ultimate highway public-private partnership (PPP) in Florida achieved Envision Platinum too.

Skanska has made a strong commitment to integrate Envision into U.S. civil infrastructure projects. Also, as beneficial as Envision is, the current version is focused on the planning and design phases of a project, with little focus on construction. For the next version of Envision due out in 2018, Skanska has a key role in incorporating construction aspects throughout the system, and in leading the development of four credits focused on construction activities.

Through such aspects as treating rainwater to use as drinking water, the Brock Environmental Center meets Deep Green criteria and is certified as a Living Building.

A project so Deep Green that it transforms rain into drinking water

In 2016, the Brock Environmental Center in Virginia Beach, USA, became the 11th building in the world certified under the Living Building Challenge, which sets demanding green building criteria, including for materials. Living Buildings meet Skanska's Deep Green criteria.

In the Center's first year, it generated 83 percent more power than it used, thanks to its photovoltaic panels and wind turbines. Also, it is the first USA commercial building permitted to turn rain into drinking water. As program manager, Skanska advised the customer and the design and construction team, drawing on the Group's involvement with other Living Buildings.

Energy: Energy positive building – delivered 83 percent surplus electricity to the grid in its first year of operation.

Carbon: Embodied carbon reduced by 7 percent.

Materials: Extensive use of environmentally responsible construction materials, and 95.9 percent of construction waste diverted from landfill.

Water: Net-zero water, and was first commercial building in the USA to legally use purified rainwater for human consumption.

Systematic environmental management

Since 2000, Skanska has certified all its operations to the international ISO 14001 environmental management standard; no major non-conformities were reported in 2016. With this, Skanska has systematic environmental management and risk management procedures, and is currently transitioning to the new ISO 14001:2015 standard. Skanska UK certified to this new standard in April 2016, being one of the first companies worldwide to do so.

Climate leadership recognition

Skanska was recognized as a climate leader by the 2016 "Climate A List" compiled by CDP, formerly the Carbon Disclosure Project. This puts Skanska among the leading 193 companies in the world on climate action - or around 9 percent of the responding companies worldwide. This is an important milestone on Skanska's journey to be a low-carbon business.

Greenhouse gas emissions from Skanska's operations Direct (Scope 1) and Indirect (Scope 2)

in tons CO₂e

	2016 ¹	2015	2014	2013	2012	2011	2010
Scope 1	312,800	330,758	367,791	386,154	354,518	341,869	305,986
Scope 2 ²	52,704	49,207	60,494	51,305	50,981	67,886	110,866

¹ In 2016, Skanska changed the reporting year for carbon to cover a 12-month period from the fourth quarter of the prior year through the third quarter the following year. The 2016 carbon emission metrics cover from the beginning of the fourth quarter 2015 through the end of the third quarter 2016.

² Location based approach.

A majority of carbon emissions from Skanska's Construction Business Units are third-party reviewed.

Corporate Community Investment

Skanska continues to embed Corporate Community Investment (CCI) into its business. CCI is becoming a core component of Skanska's projects, just like other Sustainability aspects and technical elements. The Group's intention is to leverage all projects to create long-lasting positive benefits for local societies, customers, Skanska and employees.

Skanska focuses its CCI on stimulating local workforce integration and advancement, and on developing projects in ways that enhance surrounding neighborhoods. These are important for the future of society and directly relate to Skanska's business. Through CCI, Skanska helps address social challenges faced by local communities. Skanska benefits too: more engaged employees, value delivered to our customers' customers, and lasting, positive legacies for communities. Also, CCI helps Skanska live its strong values, such as Commit to Customers.

Appreciated by customers

The Group's CCI initiatives continue to be appreciated by customers, many of which are increasingly aware of CCI and expect it. Legislation, such as the European Union Procurement Directive, will further drive this. While Skanska strives to advance with CCI, the Group's CCI commitment and capabilities already are a key reason why some customers choose Skanska.

Investing in local workforces

Workforce development and integration provides opportunities for local residents to contribute their skills to Skanska projects; to better enable Skanska to seek talent from untapped parts of the labor market; and to develop Skanska's employees.

For example, at the Kvibergs Entré Residential Development project in Gothenburg, Sweden, Skanska provided construction training to local people who were having trouble gaining entry to the labor market. This helped those people unlock employment opportunities, and better integrate into society. Also, the local municipality benefited from this integration, and Skanska gained the diverse skills of new employees.

Investing in communities

The increasing number of projects developed by Skanska are a top opportunity to enhance local communities and support customers through their design and what they provide.

For example, the educational courtyard at Klipporna, a Skanska Commercial Property Development project in Malmö, Sweden, is an inviting space open to the local community. The garden is used as a space for occupants to relax and for school children to learn. It adds value for tenants, the building owner and the community.

Focused on maximized impacts

With Corporate Community Investment, Skanska's focus is on maximizing impacts – emphasizing quality over quantity. For example, with workforce integration we prioritize creating high-quality programs that provide participants with a high possibility of finding a job, rather than aiming to get the most people through the program in the shortest time and at the lowest cost, and with less focus on the end result. In this case, people getting jobs is what creates value for society.

Skanska strives to actively demonstrate to customers and society how CCI adds value to projects and developments. The Group is keen to lead the industry in this form of thinking to show how Construction and Project Development can contribute to a better society.

Diversity and Inclusion

In 2013, Skanska stated a Group-wide Diversity and Inclusion (D&I) vision that still guides the company. It states that by 2020, Skanska will be recognized as a leader in diversity and inclusion in all home markets, mirroring the diversity in society on all levels of the organization. Also, by 2020 Skanska's leaders will be excellent in fostering an inclusive culture. Skanska sees its high level of focus on diversity and inclusion as a competitive advantage.

Integrated into core activities

In 2016, the implementation of the 2020 Profit with Purpose Business Plan meant an increasing focus on diversity and inclusion, both on the Group level as well as in the Business Units. It has also meant a closer collaboration between the different Sustainability areas.

This increased diversity and inclusion focus has included Group-wide Human Resources efforts, such as the relaunch of the Skanska Leadership Profile that guides employee development and increased focus on living Skanska's values. Also, diversity and inclusion is addressed in the new Code of Conduct. Several Business Units used the launch of the new Code of Conduct as a way to increase D&I awareness and review D&I actions.

Overall, diversity and inclusion is increasingly becoming part of core business activities. The connection between D&I and safety is increasingly being made. For example, as Skanska Sweden sets out to achieve an Injury-Free Environment through an extensive development program targeting all employees, they simultaneously address D&I. The end goal with the Injury-Free Environment program is to create a culture of employees caring for the safety of one another, which corresponds very well with ambition within D&I to create an inclusive culture.

Active diversity and inclusion activities

Through ongoing meetings and learning sessions, the Group-wide community of inclusion advocates – senior line managers who head D&I within Business Units and who report to their Business Unit

President – and Human Resources experts working with D&I has grown stronger and become more skilled as change leaders. SWAG, the Senior Women Advisory Group advising the Senior Executive Team on matters related to inclusive culture and leadership, has grown and been very active. SWAG's activities in 2016 included two Group-wide meetings in which Skanska D&I leaders met with EY, Google and other companies to benchmark and share ideas with diversity and inclusion.

To develop more leaders who are skilled in inclusive leadership, several Business Units run inclusive leadership programs and/or workshops with the ambition of targeting all managers.

Positive achievements

In 2016, Skanska continued to see positive developments with key diversity and inclusion metrics.

One indication of progress is that the number of women among all employees and in management positions continued to increase in 2016. Women employees have increased from 12 percent (2012) to 17 percent (2016). Also, the share of women in the three highest managerial levels has increased from 13 percent (2012) to 20 percent (2016).

A great highlight of the year was Skanska UK being awarded two prestigious industry awards for D&I efforts: Diversity Champion of the Year Award and Judges' Supreme Award.

Employees divided by gender

Category	2016, %		2015, %	
	Men	Women	Men	Women
Skilled workers	98	2	98	2
White collar employees	71	29	72	28
Management positions	80	20	81	19
Senior executives	78	22	78	22
Skanska AB Board	77	23	79	21

Human Resources

The average number of employees in 2016 was 42,903 (48,470), of whom 10,158 (10,330) were in Sweden. The substantial decrease is a result of the winding down and sale of the Latin American operations. Skanska places great emphasis on attracting, recruiting and introducing new employees to the organization.

The Skanska employee ownership program (Seop) is aimed at attracting employees and retaining them within the Group, and creating greater affinity and dedication. All permanent employees of the Skanska Group are entitled to participate in the program, and currently 30 percent (27) of those eligible are participants.

The Group uses annual employee surveys to obtain an understanding of job satisfaction levels, morale and professional development needs. In 2016 a new Group-wide employee survey was developed to support the Profit with Purpose business plan. This will be implemented in all Business Units for the first time in April 2017. One of the most important factors in attracting and retaining employees is the opportunity for continued professional development within the company. The Group thus strongly emphasizes creating a culture in which managers and other employees provide each other with mutual feedback, where employees can undertake new, challenging assignments, and where proficiency-raising initiatives are offered. At the Group level, the Skanska Top Executive Program (STEP) is run in collaboration with IMD business school in Switzerland and Ivey Business School in Canada.

Skanska also has a global talent program called Skanska Stretch. It is aimed at key talents at an early stage in their career and on their way into a management role. The program has a clear international emphasis and all participants have an opportunity to work abroad after completing the program. In addition, all Business Units have training programs that match the needs of the respective unit and target employees at all levels.

The annual Talent Review process provides the basis for succession planning and professional development for employees. It is uniformly implemented in all of the Group's Business Units in order to obtain a Group-wide picture of competencies and development needs at both the individual and Business Unit level.

Skanska uses a Group-wide skills profile – Skanska Leadership Profile – for the purpose of clarifying the expectations placed on all employees and providing opportunities for continuous professional development.

Work on Skanska Unlimited – a program aimed at increasing the exchange of expertise within the Group – continued in 2016. Employees are given an opportunity to try an assignment at a different Business Unit – internationally or in the same market – for a period of three to six months.

For Skanska, diversity is a matter of embracing and utilizing the abilities of every individual. Skanska's actions are based on the conviction that the company's competitiveness will be enhanced if its employees are satisfied with their work situation and have the opportunity for professional development regardless of gender, ethnicity or educational background. Currently, a significant number of women are active at the project level within the Group, but the percentage of women in management positions is still too low. Efforts to increase diversity are under way, both at the Group level and in each Business Unit. The Group works continuously to set diversity targets for its Business Units, for example to increase the percentage of new female recruits or to raise the level of knowledge and awareness about diversity within the organization.

Remuneration to senior executives

For information about the most recently approved guidelines for determining salaries and other remuneration to the President and CEO and other executive officers, see Note 37 Remuneration to senior executives and Board members.

In April 2017 the Board will propose to the Annual General Meeting that the current guidelines for salaries and other remuneration to senior executives remain unchanged.

The Board's proposal for salary and other remuneration to senior executives for approval by the 2017 Annual General Meeting

Remuneration to senior executives of Skanska AB is to consist of a fixed salary, possible variable remuneration, other customary benefits and pension. The senior executives include the President and CEO and the other members of the Senior Executive Team. The combined remuneration for each executive must be market-based and competitive in the job market in which the executive is placed, and distinguished performance should be reflected in the total remuneration package.

Fixed salary and variable remuneration are to be linked to the responsibility and authority of the executive. The variable remuneration is to be payable in cash and/or shares, and it is to have a ceiling and be related to fixed salary. The receipt of shares requires a three-year vesting period and is to be part of a long-term incentive program. Variable remuneration is to be based on performance in relation to established targets and is to be designed to achieve better alignment between the interests of the executive and of the company's shareholders. The terms of variable remuneration should be designed in such a way that if exceptional economic conditions exist, the Board has the ability to limit or refrain from paying variable remuneration if such payment is deemed unreasonable and incompatible with the company's other responsibilities to shareholders, employees and other stakeholders.

If a member of the Board performs work on behalf of the company in addition to his or her assignment on the Board, a consultant fee and other compensation for such work may be payable.

In case of termination or resignation, the normal notice period is six months, combined with severance pay equivalent to a maximum of 18 months of fixed salary or, alternatively, a notice period of a maximum of 24 months. With respect to the annual bonus, the Board has the possibility of limiting or refraining from paying this variable remuneration if it deems such action reasonable for other reasons.

Pension benefits are to be in the form of either defined-benefit or defined-contribution plans, or a combination of both, and entitle the executive to receive a pension from the age of 65. In individual cases, however, the retirement age may be as low as 60. To earn full defined-benefit pension, the individual is required to have been employed for as long a period as is required under the company's general pension plan in each respective country. Variable remuneration is not pensionable except in cases where this is stipulated in the rules for a general pension plan (e.g. Sweden's ITP occupational pension plan.)

The Board of Directors may deviate from these guidelines if there are special reasons to do so in an individual case.

Matters relating to the President and CEO's salary and other remuneration are addressed by the Compensation Committee in preparation for decisions by the Board. Matters relating to the salary and other remuneration for other senior executives are decided upon by the Compensation Committee.

Skanska employee ownership program (Seop)

The purpose of the Seop is to strengthen the Group's ability to retain and recruit qualified personnel and to align employees more closely to the company and its shareholders.

The program provides employees with the opportunity to invest in Skanska shares while receiving incentives in the form of possible allotment of additional share awards. This allotment is predominantly performance-based.

Shares are only allotted after a three-year lock-up period. To be able to earn matching shares and performance shares, a person must be employed during the entire lock-up period and have retained the shares purchased within the framework of the program. Under Seop 2, which ran during the period 2011–2013, matching shares and performance shares were allotted in 2016 for the shares in which employees had invested in 2013 and which they had retained for the three-year lock-up period.

In 2016 Seop 3 continued, running for the period 2014–2016. The Annual General Meeting in 2016 approved a new employee ownership program, Seop 4, running for the period 2017–2019. Seop 4 is essentially identical to Seop 3.

The accounting principles applied for the employee ownership programs can be found in Note 1 IFRS 2 Share-based Payment.

Information concerning shares

In order to ensure allotment of shares to the participants in Skanska's share incentive programs, the 2016 Annual General Meeting authorized the Board of Directors to repurchase treasury shares. According to this decision the company may buy a maximum of 4,000,000 Skanska Series B shares to ensure allotment of shares to participants in Seop 3 and a maximum of 500,000 Skanska Series B shares to ensure allotment of shares to participants in Seop 4.

During the year, Skanska repurchased a total of 4,345,000 shares at an average price of SEK 182.49. The average price of all repurchased shares is SEK 132.18. The quota value of the repurchased shares is SEK 3.00 per share, totaling SEK 13.0 M, and the shares represent 1.0 percent of the total share capital. The acquisition cost amounts to SEK 793 M. During the year, 2,616,579 shares were allocated to participants in the employee ownership program. The quota value of these shares is SEK 3.00 per share, totaling SEK 7.8 M, and the shares represent 0.6 percent of the total share capital. As of December 31, 2016 holdings of treasury shares amounted to 10,594,644 shares. The quota value of these shares is SEK 3.00 per share, totaling SEK 31.8 M, and the shares represent 2.5 percent of the total share capital. The acquisition cost amounts to SEK 1.4 billion.

Proposed dividend

The Board of Directors proposes a regular dividend of SEK 8.25 (7.50) per share. The proposal is equivalent to a regular dividend totaling SEK 3,377 M (3,075). The Board proposes April 6 as the record date for the dividend. The Board's assessment is that the Group's financial position and circumstances in general warrant an increase in the dividend to SEK 8.25 per share.

No dividend is paid for the Parent Company's holding of Series B treasury shares. The total dividend amount may change by the record date, depending on repurchases of shares and the transfer of shares to participants in long-term employee ownership programs.

The Board's justification for its proposed dividend

The nature and scale of Skanska's operations are described in the Articles of Association and this Annual Report. The operations carried out within the Group do not pose any risks beyond those that occur or can be assumed to occur in the industry, or the risks that are otherwise associated with conducting business activities. The Group's dependence on the general economic situation does not deviate from what is otherwise the case in the industry.

The Group's equity/assets ratio amounts to 25.8 percent (24.8). The proposed dividend does not jeopardize the investments that are considered necessary or investments to support the Group's continued development. The Group's financial position does not give rise to any conclusion other than that the Group can continue to develop its operations and that the company can be expected to meet its short-term and long-term obligations.

With reference to the above and what has otherwise come to the Board's attention, the Board has concluded that the dividend is justified based on the requirements that the risks and the nature and scale of the Group's operations place on the size of the company's and the Group's equity and the Group's consolidation requirements, liquidity and position in general. Future profits are expected to cover both the growth of business operations and the growth of the ordinary dividends.

Note 1. Consolidated accounting and valuation principles

Conformity with laws and standards

In compliance with the ordinance approved by the European Union (EU) on the application of international accounting standards, the consolidated financial statements have been prepared according to the International Financial Reporting Standards (IFRS) and International Accounting Standards (IAS) issued by the International Accounting Standards Board (IASB), as well as the interpretations by the IFRS Interpretations Committee and its predecessor, the Standing Interpretations Committee (SIC), to the extent these standards and interpretations have been approved by the EU. In addition, the Swedish Financial Reporting Board's Recommendation RFR 1 "Supplementary Rules for Consolidated Financial Statements" has been applied, as have the Statements of the Swedish Financial Reporting Board.

The Parent Company applies the same accounting principles as the Group, except in the cases indicated below in the section "Parent Company accounting and valuation principles."

The Parent Company's annual accounts and the consolidated annual accounts were approved for issuance by the Board of Directors on February 2, 2017. The Parent Company income statement and balance sheet and the consolidated income statement and statement of financial position will be subject to adoption by the Annual General Meeting on April 4, 2017.

Conditions when preparing the Group's financial reports

The functional currency of the Parent Company is Swedish crowns or kronor (SEK), which is also the reporting currency of the Parent Company and of the Group. The financial reports are therefore presented in Swedish kronor. All amounts are rounded off to the nearest million, unless otherwise stated.

Preparing the financial reports in compliance with IFRS requires management to make judgments and estimates, as well as assumptions that affect the application of accounting principles and the recognized amounts of assets, liabilities, revenue and expenses. Actual outcomes may deviate from these estimates and judgments.

Estimates and assumptions are reviewed regularly. Changes in estimates are recognized in the period the change is made if the change only affects this period, or in the period the change is made and future periods if the change affects both the period in question and future periods.

Judgments made by management when applying IFRS with a substantial impact on the financial reports and estimates that may lead to significant adjustments in the financial reports of subsequent years are described in more detail in Note 2.

The accounting principles for the Group described below have been applied consistently for all periods that are presented in the Group's financial reports, unless otherwise indicated below. The accounting principles for the Group have been applied consistently in reporting and consolidation of the Parent Company, subsidiaries, associated companies and joint arrangements.

New standards and interpretations

During the year the IASB issued a new standard, IFRS 16 Leases, which – if adopted by the EU – will have a not insignificant effect on Skanska's reporting, as described below. In addition, the IASB issued an interpretation, a number of supplements to standards and, within its work on annual improvements to IFRS standards, made adjustments to existing standards. None of these new elements is expected to have a material effect on Skanska's reporting. During the year the European Securities and Markets Authority (ESMA) issued advice concerning disclosures on alternative benchmarks – see Note 44 B.

Early adoption of new or revised IFRS and interpretations

There has been no early adoption of new or revised IFRS or interpretations.

New standards and amendments of standards that have not yet begun to be applied

The future standard IFRS 15 Revenue from Contracts with Customers mainly concerns how revenue from contracts with customers, excluding leases, is to be reported and how payment from customers is to be measured. If a customer contract contains more than one performance obligation, the price for each performance obligation is to be determined and the revenue recognized when the

obligation has been satisfied, either over time or at a point in time. The standard will be applied with effect from January 1, 2018 and was adopted by the EU in October 2016. Skanska's customer contracts rarely include multiple performance obligations. Revenue from construction operations will continue to be recognized according to the percentage-of-completion method. Sales of properties will be recognized when the purchaser takes possession of the property, as previously. The effect of the new standard on Skanska's revenue recognition is expected to be marginal.

IFRS 15 requires more detailed disclosures, however. Skanska intends to implement the standard with full retrospective effect, but IFRS 15 does not result in any changes to segment reporting of Residential Development and Commercial Property Development.

IFRS 9 Financial Instruments will replace IAS 39 Financial Instruments: Recognition and Measurement, and will be applied with effect from January 1, 2018. The standard was adopted by the EU in November 2016. The standard is based more on principles than rules, and contains a new model for classification and measurement of financial instruments, a forward-looking impairment model and a revised approach to hedge accounting. In practice, the model for classification and measurement does not result in any significant changes compared with the current standard. The new impairment model means the standard will bring forward reserves for bad debts. Skanska's credit risk arising from trade accounts receivable is limited, since business relating to construction projects is invoiced on an ongoing basis during the course of the project, and within Commercial Property Development and Residential Development payment is made when the property and home are handed over. Skanska applies hedge accounting to a limited extent. The effect on Skanska's financial reporting is expected to be marginal.

In January 2016, the IASB published the new standard IFRS 16 Leases, which, assuming it is adopted by the EU, will be applied with effect from January 1, 2019. In contrast to the present IAS 17 Leases, the standard means that, as lessee, Skanska must report operating leases as well as finance leases in the statement of financial position, unless the lease is short-term or of low value. A preliminary estimate of the effect expects the new standard to increase total assets by 3–5 percent.

IAS 1 Presentation of Financial Statements

Income statement

Reported as revenue are: project revenue, compensation for other services performed, divestment of current-asset properties, deliveries of materials and merchandise, rental income and other operating revenue. Revenue from the sale of machinery, equipment, non-current-asset properties and intangible assets are not included, but are instead recognized on a net basis among operating expenses against the carrying amounts of the assets.

Items reported as cost of sales include: direct and indirect manufacturing expenses, loss risk provisions, the carrying amounts of divested current-asset properties, bad debt losses and warranty expenses. Also included is depreciation on property, plant and equipment used in construction and property management. Changes in the fair value of derivatives related to operations are recognized in profit or loss.

Selling and administrative expenses include customary administrative expenses, technical expenses and selling expenses, as well as depreciation of machinery and equipment that have been used in selling and administration processes. Goodwill impairment losses are also reported as a selling and administrative expense.

Profit/loss from joint ventures and associated companies is recognized separately in the income statement, allocated between operating income (share of income after financial items) and taxes.

Financial income and expenses are recognized divided into two items: "Financial income" and "Financial expenses." Among items recognized under financial income are interest income, dividends, gains on divestments of shares and other financial items. The item "Financial expenses" includes interest expenses and other financial items. Changes in the fair value of financial instruments, primarily derivatives connected to financial activities, are recognized as a separate sub-item allocated between financial income and financial expenses. The net amount of exchange-rate differences is recognized either as financial income or financial expenses. Financial income and expenses are described in more detail in Note 6 and in Note 14.

Comprehensive income

Aside from profit for the year, the consolidated statement of comprehensive income includes the items that are included under "Other comprehensive income." These include translation differences, hedging of exchange-rate risks in foreign operations, remeasurements related to pension-linked assets and liabilities, effects of cash-flow hedges and tax on these items.

Statement of financial position

Assets

Assets are allocated between current assets and non-current assets. An asset is regarded as a current asset if it is expected to be realized within twelve months from the closing day or within the company's operating cycle. The operating cycle is the period from the signing of a contract until the company receives cash payment on the basis of a final inspection or delivery of goods (including properties). Since the Group executes large contracting projects and project development, the operating cycle criterion means that many more assets are labeled as current assets than if the only criterion were within twelve months.

Cash and cash equivalents consist of cash and immediately available deposits at banks and equivalent institutions, plus short-term liquid investments with a maturity from the acquisition date of less than three months, which are subject to only an insignificant risk of fluctuation in value. Checks that have been issued reduce liquid assets only when cashed. Cash and cash equivalents that cannot be used freely are reported as current assets (current receivables) if the restriction will cease within twelve months from the closing day. In other cases, cash and cash equivalents are reported as non-current assets. Cash and cash equivalents belonging to joint operations are cash and cash equivalents with restrictions if they are only permitted to be used to settle the joint operations' debts.

Assets that meet the requirements in IFRS 5 Non-current Assets Held for Sale and Discontinued Operations are accounted for as a separate item among current assets.

Note 31 shows the allocation between interest-bearing and non-interest-bearing assets.

In Note 32, assets are allocated between amounts for assets that are expected to be recovered within twelve months from the closing day and assets that are expected to be recovered later than twelve months from the closing day. The division for non-financial non-current assets is based on expected annual depreciation. The division for current-asset properties is mainly based on outcomes during the past three years. This division is even more uncertain than for other assets, since the outcome during the coming year is strongly influenced by the dates when large individual properties are handed over.

Equity

The Group's equity is allocated between "Share capital," "Paid-in capital," "Reserves," "Retained earnings" and "Non-controlling interests."

Acquisitions of treasury shares and other equity instruments are recognized as a deduction from equity. Proceeds from the divestment of equity instruments are recognized as an increase in equity. Any transaction costs are recognized directly in equity.

Dividends are recognized as a liability once the Annual General Meeting has approved the dividend.

A description of equity, the year's changes and disclosures concerning capital management are provided in Note 26.

Liabilities

Liabilities are allocated between current liabilities and non-current liabilities. Recognized as current liabilities are liabilities that are either supposed to be paid within twelve months from the closing day or – in the case of business-related liabilities only – are expected to be paid within the operating cycle. Since the operating cycle is taken into account, no non-interest-bearing liabilities, such as trade accounts payable and accrued employee expenses, are recognized as non-current. Liabilities that are recognized as interest-bearing due to discounting are included among current liabilities, since they are paid within the operating cycle. Interest-bearing liabilities can be recognized as non-current even if they fall due for payment within twelve months from the closing day if the original maturity was longer than twelve months and the company reaches an agreement to refinance the obligation long-term before the end of the reporting period. Information on liabilities is provided in Note 27 and Note 30.

In Note 32, liabilities are allocated between amounts for liabilities to be paid within twelve months of the closing day and liabilities to be paid later than twelve months from the closing day. Note 31 also provides information about the allocation between interest-bearing and non-interest-bearing liabilities.

IFRS 10 Consolidated Financial Statements

The consolidated financial statements cover the accounts of the Parent Company and the companies in which the Parent Company has a direct or indirect controlling interest. Under IFRS 10 a controlling interest exists when the investor has power over the business, or when it has rights to or is exposed to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. If, on the acquisition date, a subsidiary meets the conditions to be classified as held for sale in accordance with IFRS 5, it is reported according to that accounting standard.

The sale of a portion of a subsidiary is recognized as a separate equity transaction when the transaction does not result in a loss of controlling interest. If control of a Group company engaged in business ceases, any remaining holding is to be recognized at fair value. Non-controlling interests may be recognized as a negative amount if a partly-owned subsidiary is operating at a loss.

Acquired companies are consolidated from the quarter within which the acquisition takes place. In a corresponding manner, divested companies are consolidated up to and including the final quarter before the divestment date.

Intra-Group receivables, liabilities, revenue and expenses are eliminated in their entirety when the consolidated financial statements are prepared.

Gains that arise from intra-Group transactions and that are unrealized from the standpoint of the Group on the closing day are eliminated in their entirety. Unrealized losses on intra-Group transactions are also eliminated in the same way as unrealized gains, to the extent that the loss does not correspond to an impairment loss.

Goodwill attributable to operations abroad is expressed in local currency. Translation to SEK is in compliance with IAS 21.

IFRS 3 Business Combinations

This accounting standard deals with business combinations, which refers to mergers of separate entities or operations. If an acquisition does not relate to a business, which is usually the case when acquiring properties, IFRS 3 is not applied. In such cases, the acquisition cost is instead allocated among the individual identifiable assets and liabilities based on their fair values on the acquisition date, without recognizing goodwill and any deferred tax assets/liability resulting from the acquisition.

Acquisitions of businesses, regardless of whether the acquisitions concern holdings in another company or a direct acquisition of assets and liabilities, are reported according to the purchase method of accounting. If the acquisition concerns holdings in a company, the method involves regarding the acquisition as a transaction through which the Group indirectly acquires the assets of the subsidiary and assumes its liabilities and contingent liabilities. The cost of the acquisition recognized in the consolidated accounts is determined by means of an acquisition analysis in conjunction with the business combination transaction. The analysis establishes both the cost of the holdings or the business and the fair value of acquired identifiable assets plus the liabilities and contingent liabilities assumed. The difference between the cost of acquiring holdings in a subsidiary and the net fair value of acquired assets and of the liabilities and contingent liabilities assumed is goodwill on consolidation. If non-controlling interests remain after the acquisition, the calculation of goodwill is normally carried out based solely on the Group's stake in the acquired business.

Transaction costs relating to business combinations are expensed immediately. In case of step acquisitions, previous holdings are remeasured at fair value and recognized in profit or loss when a controlling interest is achieved. Contingent consideration is recognized on the acquisition date at fair value. If the contingent consideration amount changes in subsequent financial statements, the change is recognized in profit or loss.

Goodwill is carried at cost less accumulated impairment losses. Goodwill is allocated among cash-generating units and is subject to annual impairment testing in compliance with IAS 36.

In the case of business combinations where the cost of acquisition is below the net value of acquired assets and the liabilities and contingent liabilities assumed, the difference is recognized directly in profit or loss.

IAS 21 The Effects of Changes in Foreign Exchange Rates

Foreign currency transactions

Foreign currency transactions are translated into an entity's functional currency at the exchange rate prevailing on the transaction date. Monetary assets and liabilities in foreign currency are translated to the functional currency at the exchange rate prevailing on the closing day. Exchange-rate differences that arise in remeasurement are recognized in profit or loss. Non-monetary assets and liabilities recognized at historic cost are translated at the exchange rate on the transaction date.

Functional currency is the currency of the primary economic environment where the companies in the Group conduct their business.

Financial statements of foreign operations

Assets and liabilities in foreign operations, including goodwill and other consolidated surpluses and deficits, are translated to Swedish kronor at the exchange rate prevailing on the closing day. Revenue and expenses in foreign operations are translated to Swedish kronor at the average exchange rate. If foreign operations are located in a country with hyperinflation, revenue and expenses are translated in a specific way if it is expected to have a material effect on the Group. In this year's financial statements, it has not been necessary to do this.

Net investment in foreign operations

Translation differences that arise in connection with translation of a foreign net investment are recognized under "Other comprehensive income." Foreign currency loans and currency derivatives for hedging of translation exposure are carried at the exchange rate on the closing day. Exchange-rate differences are recognized, taking into account the tax effect, under "Other comprehensive income."

Hedging of translation exposure reduces the exchange-rate effect when translating the financial statements of foreign operations to SEK. Any forward contract premium is accrued until maturity and is recognized as interest income or interest expense.

When divesting foreign operations, the related accumulated translation differences and accumulated exchange-rate differences from any currency hedges are recognized in the Group's profit or loss.

IFRS 5 Non-current Assets Held for Sale and Discontinued Operations

Discontinued operations constitute a portion of a company's operations that represent a separate line of business or major operations in a geographical area and which are part of a single coordinated plan to dispose of a separate line of business or major operations in a geographical area, or constitute a subsidiary acquired exclusively with a view to resale.

Classification as discontinued operations occurs upon divestment, or at an earlier date when the operations meet the criteria to be classified as held for sale. A disposal group that is to be shut down can also qualify as discontinued operations if it meets the above size criteria.

If a non-current asset or disposal group is to be classified as held for sale, the asset (disposal group) must be available for sale in its present condition. It must also be highly probable that the sale will occur. In order for a sale to be highly probable, a decision must have been made at management level, and active efforts to locate a buyer and complete the plan must have been initiated. The asset or disposal group must also be actively marketed at a price that is reasonable in relation to its fair value, and it must be probable that the sale will occur within one year. Skanska also applies the principle that with regard to a single non-current asset, its value must exceed EUR 100 M.

No depreciation or amortization of a non-current asset takes place as long as it is classified as held for sale.

Non-current assets classified as held for sale as well as disposal groups and liabilities attributable to them are presented separately in the statement of financial position.

IAS 28 Investments in Associates and Joint Ventures

Companies in which the Skanska Group exercises a significant but not a controlling influence, which is presumed to be the case when the Group's holding is between 20 and 50 percent of the voting power, are reported as associated companies. In addition, it is presumed that this ownership is one element of a long-term connection and that the holding will not be reported as a joint arrangement.

Associated companies are recognized according to the equity method, as are joint ventures. See IFRS 11 on joint ventures.

The equity method

From the date when Skanska gains a significant influence in an associated company, or a joint controlling interest in a joint venture, holdings in associated companies and joint ventures are recognized in the consolidated financial statements according to the equity method. Any difference upon acquisition between the cost of the holding and Skanska's share of the net fair value of the associated company's or joint venture's identifiable assets, liabilities and contingent liabilities is recognized in compliance with IFRS 3. Under the equity method, the recognized carrying amount of the Group's interest in associated companies and joint ventures is equivalent to the Group's share of the associated company's share capital, as well as goodwill on consolidation and any other remaining consolidated surpluses and deductions of internal profits. The Group's share of the associated company's or joint venture's income after financial items is recognized as "Income from joint ventures and associated companies" in the income statement. Any depreciation, amortization and impairment losses on acquired surpluses have been taken into account. The Group's share of the tax expense of an associated company or joint venture is included in "Taxes." Dividends received from an associated company or joint venture are deducted from the carrying amount of the investment.

When the Group's share of recognized losses in an associated company or joint venture exceeds the carrying amount of the holdings in the consolidated financial statements, the value of the holding is reduced to zero. Settlement of losses also occurs against long-term unsecured financial assets (subordinated loans), which, in substance, form part of Skanska's net investment in the associated company or joint venture and are thus recognized as shares. Continued losses are not recognized unless the Group has provided guarantees to cover losses arising in the associated company or joint venture, and then as a provision.

Elimination of intra-Group profits

When profits arise from transactions between the Group and an associated company or a joint venture, the portion equivalent to the Group's share of ownership is eliminated. If the carrying amount of the Group's holding in the associated company is below the elimination of internal profit, the excess portion of the elimination is recognized as prepaid income. The elimination of the internal profit is adjusted in later financial statements based on how the asset is used or when it is divested. If a loss arises from a transaction between the Group and an associated company or a joint venture, the loss is eliminated only if it does not correspond to an impairment loss on the asset.

If a profit or loss has arisen in the associated company or joint venture, the elimination affects the income recognized under "Income from joint ventures and associated companies."

The equity method is applied until the date when the significant influence in an associated company or the joint controlling interest in a joint venture ceases. The sale of an interest in an associated company or in a joint venture is recognized on the date that the Group no longer has control over the holding.

Note 20 B provides information about associated companies and joint ventures.

IFRS 11 Joint Arrangements

A joint arrangement exists when the co-owners are bound by a contractual arrangement, and the contractual arrangement gives those parties joint control of the arrangement. The joint arrangement may be either a joint operation or a joint venture. A joint operation exists where the co-owners have rights to the assets of the arrangement and obligations for the liabilities of the arrangement. A joint arrangement that is not structured through the formation of a separate company is a joint operation. Contracting projects performed in cooperation with outside contracting companies, with joint and several liability, are reported by Skanska as joint operations. If the joint arrangement is a separate company but the majority of the company's production is acquired by the co-owners, then the joint arrangement is often considered to be a joint operation. If, on the other hand, the co-owners of the joint arrangement only have rights to the net assets of the arrangement, it is a joint venture. Classification of a joint arrangement requires consideration of its legal form, the terms agreed by the parties in the contractual arrangement and other circumstances.

The proportional method is applied for joint operations, which means that the revenue, costs, assets and liabilities of the joint operation are included line by line in the consolidated financial statements according to Skanska's interest in the joint operation. Joint operations are described in Note 20 C.

The equity method is used for joint ventures when preparing the consolidated financial statements. This method is described under the heading IAS 28. In

connection with infrastructure projects, the Group's investment may include either holdings in or subordinated loans to a joint venture. Both are treated in the accounts as holdings.

Note 20 B provides information about associated companies and joint ventures. A specification of significant holdings in joint operations is given in Note 20C.

IAS 11 Construction Contracts

Project revenues are reported in compliance with IAS 11. This means that the income from a construction project is reported successively as the project progresses towards completion. The stage of completion is mainly determined on the basis of accumulated project expenses in relation to estimated accumulated project expenses upon completion. If the outcome cannot be estimated in a satisfactory way, revenue is reported as equivalent to accumulated expenses on the closing day (zero recognition). Anticipated losses are immediately reported as expenses.

The original contract amount as well as additional work, claims for special compensation and incentive payments are recognized as project income, but normally only to the extent that the latter have been approved by the customer. All services that are directly related to the construction project are covered by IAS 11. Other services are covered by IAS 18. For projects related to construction of real estate, IFRIC 15 provides guidance about in which cases IAS 11 or IAS 18 are to be applied.

If substantial non-interest-bearing advance payments have been received, the advance payment is discounted and recognized as an interest-bearing liability. The difference between a nominal amount and a discounted amount constitutes project revenue and is recognized as revenue according to the percentage-of-completion method. The upward adjustment in the present value of the advance payment in subsequent financial statements is reported as an interest expense.

The difference between accrued project revenue and an amount not yet invoiced is recognized as an asset (gross amount due from customers for contract work) according to the percentage-of-completion method. Correspondingly, the difference between an invoiced amount and yet-to-be-accrued project revenue is reported as a liability (gross amount due to customers for contract work). Major machinery purchases that are intended only for an individual project and significant start-up expenses are included to the extent they can be attributed to future activities as receivables from the customer and are included in the asset or liability amount as indicated in this paragraph, but without affecting accrued project revenue.

Tendering expenses are not capitalized but are charged against earnings on a continuous basis. Tendering expenses that arose during the same quarter that the order was received, and that are attributable to the project, may be treated as project expenditures. In the case of infrastructure projects, instead of the quarter when the order was received, this applies to the quarter when the Group receives the status of preferred bidder, provided that it is considered highly probable that a final agreement will be reached. Tendering expenses that were recognized in prior interim or annual reporting periods may not be recognized as project expenses in later periods.

Forward contracts related to hedging of operating transaction exposures are recognized at fair value on the closing day. If hedge accounting is not applicable, the liquidity effect when extending a forward contract that meets future cash flow is included among operating expenses. If the amount has a significant impact, it is to be excluded when determining stage of completion.

Most construction contracts contain clauses concerning warranty obligations on the part of the contractor, with the contractor being obliged to remedy errors and omissions discovered within a certain period after the contracted work has been handed over to the customer. Such obligations may also be required by law. The main principle is that such a provision for warranty obligations must be calculated for each individual project. Provisions must be made continuously during the course of the project and the estimated total provision must be included in the project's expected final expenses. For units with similar projects, the provision may be made in a joint account instead and be calculated for the unit as a whole with the help of ratios that have historically constituted a satisfactory provision for these obligations.

IAS 18 Revenue

Revenue other than project revenue is recognized in compliance with IAS 18. In the case of rental income, the revenue is divided evenly over the period of the lease. The total cost of benefits provided upon signing of a lease is recognized as a reduction in lease income on a straight-line basis over the lease period. Compensation for services performed that does not constitute project revenue

is recognized as revenue based on the degree of completion on the closing day, which is normally determined as services performed on the closing day in proportion to the total to be performed. The difference that may then arise between services invoiced and services performed is recognized in the statement of financial position among "Other operating receivables" (or "Other operating liabilities"). Deliveries of merchandise are reported as revenue when the essential risks and rewards associated with ownership of the merchandise have been transferred to the buyer.

A dividend is recognized as revenue when the right to receive payment has been established.

Income from the sale of financial investments is recognized when the significant risks and rewards associated with ownership of the instruments have been transferred to the buyer and the Group no longer controls the instruments.

Interest is recognized using an interest rate that provides a uniform return on the asset in question, which is achieved by applying the effective-interest method. Effective interest is the interest rate at which the present value of all future payments is equal to the carrying amount of the receivable.

Revenue is carried at the fair value of what is received or will be received. This means that receivables arising at the time of divestments are regarded as having been acquired at fair value (discounted present value of future incoming payments) if the interest rate on the date of the purchase is below the market interest rate and the difference in absolute terms is significant.

Revenue is recognized only if it is probable that the economic benefits will flow to the Group. If uncertainty later arises with regard to the possibility of receiving payment for an amount that has already been recognized as revenue, the amount for which payment is no longer probable is recognized as an expense, instead of as an adjustment of the revenue amount that was originally recognized.

IFRIC 12 Service Concession Arrangements

IFRIC 12, which affects Skanska Infrastructure Development, deals with the question of how the operator of a service concession should account for the infrastructure, as well as the rights it receives and the obligations it undertakes under the agreement. The operator constructs or upgrades infrastructure (construction or upgrade services) used to provide a public service and maintains the infrastructure (operation services) for a specified period of time. The consideration (payment) that the operator receives is allocated between construction or upgrade services and operation services according to the relative fair values of the respective services. Construction or upgrade services are reported in compliance with IAS 11 and operation services in compliance with IAS 18. For construction or upgrade services, the consideration may be rights to a financial asset or an intangible asset. If the operator has an unconditional right in specified or determinable amounts, it is a financial asset. If the operator instead has the right to charge the users of the public service, it is an intangible asset.

IFRIC 15 Agreements for the Construction of Real Estate

IFRIC 15 is applied to accounting for revenue and expenses when a company undertakes the construction of real estate. The interpretation addresses the issue of whether accounting for construction of real estate should be in accordance with IAS 11 or IAS 18, and when the revenue from the construction of real estate should be recognized. It assumes that the company retains neither an involvement nor effective control over the real estate to an extent that would preclude recognition of the consideration as revenue. IAS 11 is to be applied when the buyer can specify the structural elements of the design of the real estate before construction begins, or specify major changes once construction is in progress. Otherwise IAS 18 is to be applied. If IAS 11 is applied, the percentage-of-completion method is used. If IAS 18 is applied, it must first be determined whether the agreement involves the rendering of services or the sale of goods. If the company is not required to acquire or supply construction materials, it is an agreement for rendering of services and revenue is recognized according to the percentage-of-completion method. If the company is required to provide services as well as construction materials, it is an agreement for the sale of goods. Revenue is then recognized when, among other things, the company has transferred to the buyer the significant risks and rewards associated with ownership, which normally occurs upon the transfer of legal ownership, which often coincides with the date the purchaser takes possession of the property.

For Residential Development and Commercial Property Development, the implications of IFRIC 15 are that revenue recognition of a property divestment occurs only when the purchaser assumes legal ownership of the property, which

normally coincides with taking possession of the property. For residential projects in Finland and Sweden that are initiated by Skanska, housing corporations and cooperative housing associations are often used to reach individual home buyers. In these cases revenue recognition occurs when the home buyer takes possession of the home.

IAS 17 Leases

The accounting standard distinguishes between finance and operating leases. A finance lease is characterized by the fact that the economic risks and rewards incidental to ownership of the asset have substantially been transferred to the lessee. If this is not the case, the agreement is regarded as an operating lease.

Finance leases

Assets that are leased under a finance lease are recognized as assets. The obligation to make future lease payments is recognized as a non-current or current liability. The leased assets are depreciated during their respective useful lives. When making payments on a finance lease, the minimum lease payment is divided between interest expense and reduction of the outstanding liability. Interest expense is allocated over the lease period in such a way that each reporting period is charged an amount equivalent to a fixed interest rate for the liability recognized during each respective period. Variable payments are recognized among expenses in the periods when they arise.

Assets leased under finance leases are not recognized as property, plant and equipment, since the risks incidental to ownership have been transferred to the lessee. Instead a financial receivable is recognized for the future minimum lease payments.

Operating leases

As for operating leases, the lease payment is recognized as an expense over the lease term on the basis of utilization, and taking into account the benefits that have been provided or received when signing the lease.

The Commercial Property Development business stream carries out operating lease transactions. Information on future minimum lease payments (rents) is provided in Note 40, which also contains other information about leases.

IAS 16 Property, Plant and Equipment

Property, plant and equipment are recognized as assets if it is probable that the Group will derive future economic benefits from them and the cost of the assets can be reliably calculated. Property, plant and equipment are recognized at cost minus accumulated depreciation and any impairment losses. Cost includes purchase price plus expenses directly attributable to the asset in order to bring it to the location and condition to be used in the intended manner. Examples of directly attributable expenses are delivery and handling costs, installation, ownership documents, consultant fees and legal services. Borrowing costs are included in the cost of property, plant and equipment produced by the Group. Impairment losses are applied in compliance with IAS 36.

The cost of self-constructed property, plant and equipment includes expenditures for materials and remuneration to employees, plus other applicable manufacturing costs that are considered attributable to the asset.

Further expenditures are added to cost only if it is probable that the Group will derive future economic benefits from the asset and the cost can be reliably calculated. All other further expenditures are recognized as expenses in the period when they arise.

The decisive factor in determining when a further expenditure is added to cost is whether the expenditure is related to replacement of identified components, or parts thereof, at which time such expenditures are capitalized. In cases where a new component is created, this expenditure is also added to cost. Any undepreciated carrying amounts for replaced components, or parts thereof, are disposed of and recognized as an expense at the time of replacement. If the cost of the removed component cannot be determined directly, its cost may be estimated as the cost of the new component adjusted by a suitable price index to take into account inflation. Repairs are recognized as expenses on a continuous basis.

Property, plant and equipment that consist of parts with different periods of service are treated as separate components of property, plant and equipment. Depreciation occurs on a straight-line basis during the estimated useful life or based on degree of use, taking into account any residual value at the end of the period. Office buildings are divided into foundation and frame, with a deprecia-

tion period of 50 years, installations of 35 years, and non-weight-bearing parts of 15 years. In general, industrial buildings are depreciated over a 20-year period without allocation into different parts. Stone crushing and asphalt plants as well as concrete mixing plants are depreciated over 10 to 25 years depending on their condition when acquired and without being divided into different parts. For other buildings and equipment, division into different components occurs only if major components with different useful lives can be identified. For other machinery and equipment, the depreciation period is normally between five and 10 years. Minor equipment is depreciated immediately. Gravel pits and stone quarries are depreciated as materials are removed. Land is not depreciated. Assessments of an asset's residual value and period of service are performed annually.

The carrying amount of a property, plant and equipment item is removed from the statement of financial position when it is disposed of or divested, or when no further economic benefits are expected from the use or disposal/divestment of the asset.

IAS 38 Intangible Assets

This accounting standard deals with intangible assets. Goodwill that arises upon acquisition of companies is recognized in compliance with the rules in IFRS 3.

An intangible asset is an identifiable non-monetary asset without physical substance that is used for producing or supplying goods or services or for leasing and administration. To be recognized as an asset, it is necessary both that it be probable that future economic benefits attributable to the asset will flow to the company and that the cost can be reliably calculated. It is especially worth noting that expenditures recognized in prior annual or interim reporting periods may not subsequently be recognized as an asset.

Research expenses are recognized in the income statement as they arise. Development expenses, which are expenses for designing new or improved materials, structures, products, processes, systems and services by applying research findings or other knowledge, are recognized as assets if it is probable that the asset will generate future revenue. Other development expenses are expensed directly. Expenses for regular maintenance and modifications of existing products, processes and systems are not recognized as development expenses. Nor is work performed on behalf of a customer recognized as development expenses.

Intangible assets other than goodwill are recognized at cost minus accumulated amortization and impairment losses. Impairment losses are applied in compliance with IAS 36.

Amortization is recognized in the income statement on a straight-line basis, or based on the degree of use, over the useful life of intangible assets, to the extent such a period can be determined. Consideration is given to any residual value at the end of the period. Acquired service contracts are amortized over the remaining contract term (three to six years, as applicable), acquired customer contracts are amortized at the pace of completion and patents are amortized over ten years. Investments in major computer systems are amortized over a maximum of seven years.

Further expenditures for capitalized intangible assets are recognized as an asset in the statement of financial position only when they increase the future economic benefits of the specific asset to which they are attributable.

IAS 36 Impairment of Assets

Assets covered by IAS 36 are tested on every closing day for indications of impairment. Exempted assets, for example inventories (including current-asset properties), assets arising when construction contracts are carried out and financial assets included within the scope of IAS 39 are measured according to the respective accounting standard.

Impairment losses are determined on the basis of the recoverable amount of assets, which is the higher of fair value less cost to sell and value in use. In calculating value in use, future cash flows are discounted using a discounting factor that takes into account risk-free interest and the risk associated with the asset. Estimated residual value at the end of the asset's useful life is included as part of value in use. For assets that do not generate cash flows that are essentially independent of other assets, the recovery value is calculated for the cash-generating unit to which the asset belongs. A cash-generating unit is the smallest group of assets that generates cash inflows that are independent of other assets or groups of assets. For goodwill, the cash-generating unit is mainly the same as the Group's Business Unit or other unit reporting to the Parent Company. Operations that are not integrated into the Business Unit's other operations are exempted from the

main rule. The same Business Unit may also contain a number of cash-generating units if it operates in more than one business stream.

In Construction, recoverable goodwill is based exclusively on value in use, which is calculated by discounting expected future cash flows. The discounting factor is the weighted average cost of capital (WACC) applicable to the operation. In Residential Development, the fair values of land parcels, minus selling expenses, are also taken into account. See Note 18.

Impairment of assets attributable to a cash-generating unit is allocated mainly to goodwill. After that, a proportionate impairment loss is applied to other assets included in the unit.

Goodwill impairment is not reversed. A goodwill-related impairment loss recognized in a previous interim report is not reversed in a subsequent full-year report or interim report.

Impairment losses on other assets are reversed if there has been a change in the assumptions on which the estimate of the recoverable amount was based.

An impairment loss is reversed only to the extent that the carrying amount of the asset after the reversal does not exceed the carrying amount that the asset would have had if no impairment loss had occurred, taking into account the amortization that would then have occurred.

IAS 23 Borrowing Costs

Borrowing costs are capitalized provided that it is probable that they will result in future economic benefits and the costs can be measured reliably. Generally speaking, capitalization of borrowing costs is limited to assets that take a substantial period of time for completion, which in the Skanska Group's case mainly means the construction of current-asset properties and properties for the Group's own use (non-current-asset properties). Capitalization occurs when expenditures included in acquisition cost have arisen and activities to complete the building have begun. Capitalization ceases when the building is completed. Borrowing costs during an extended period when work to complete the building is interrupted are not capitalized. If separate borrowing has occurred for the project, the actual borrowing cost is used. In other cases, the cost of the loan is calculated on the basis of the Group's borrowing cost.

IAS 12 Income Taxes

Income taxes consist of current tax and deferred tax. Income taxes are recognized in the income statement except when the underlying transaction is recognized directly under "Other comprehensive income," in which case the accompanying tax effect is also recognized there. Current tax is tax to be paid or received that is related to the year in question, applying the tax rates that have been decided or have effectively been decided as of the closing day; this also includes adjustment of current tax attributable to earlier periods.

Deferred tax is calculated according to the balance sheet method based on temporary differences arising between reported and fiscal values of assets and liabilities. The amounts are calculated based on how the temporary differences are expected to be settled and by applying the tax rates and tax rules that have been decided or announced as of the closing day. The following temporary differences are not taken into account: for a temporary difference that has arisen upon initial recognition of goodwill, the initial recognition of assets and liabilities that are not business combinations and which, on the transaction date, affect neither recognized profit nor taxable profit. Also not taken into account are temporary differences attributable to shares in subsidiaries and associated companies that are not expected to be reversed in the foreseeable future. Offsetting of deferred tax assets against deferred tax liabilities occurs when there is a right to settle current taxes between companies.

Deferred tax assets related to deductible temporary differences and loss carry-forwards are recognized only to the extent it is likely that they will be utilized. The value of deferred tax assets is reduced when it is no longer considered probable that they can be utilized.

IAS 2 Inventories

Aside from customary inventories of goods, the Group's current-asset properties are also encompassed by this accounting standard. Both current-asset properties and inventories of goods are measured item by item in accordance with the lowest cost principle, which means that a property or item is measured either by its acquisition cost or net realizable value, whichever is lower. Net realizable value is the estimated selling price in the ordinary course of business less the estimated cost of completion and the estimated costs necessary to make the sale.

When item-by-item measurement cannot be applied, the cost of inventories is assigned by using the first-in, first-out (FIFO) formula and includes expenditures that have arisen from acquisition of inventory assets and from bringing them to their present location and condition. For manufactured goods, cost includes a reasonable share of indirect costs based on normal capacity utilization. Materials not yet installed at construction sites are not recognized as inventories, but are included among project expenses.

Except for properties that are used in Skanska's own business, the Group's property holdings are reported as current assets, since these holdings are included in the Group's operating cycle. The operating cycle for current-asset properties is around three to five years.

Acquisitions of properties are recognized in their entirety only upon the transfer of legal ownership, which normally occurs on completion of the purchase. Property acquisitions through purchases of property-owning companies are recognized when the shares have been taken over by Skanska.

Current-asset properties are divided up between Commercial Property Development and Residential Development. They are also categorized as "Development properties," "Properties under construction" or "Completed properties." Note 22 provides information about these properties.

Before impairment loss, properties both completed and under construction are valued based on costs paid directly, a reasonable proportion of indirect costs and interest expenses during the construction period. Information on market appraisal of properties is provided at the end of this note.

Information on the usual product inventories is found in Note 23.

IAS 37 Provisions, Contingent Liabilities and Contingent Assets

Provisions

A provision is recognized when the Group has a legal or informal obligation as a result of a past event, and it is probable that an outflow of economic resources will be required to settle the obligation and a reliable estimate of the amount can be made.

Skanska makes provisions for future expenses relating to warranty obligations according to construction contracts that involve a liability for the contractor to remedy errors and omissions that are discovered within a certain period after the contractor has handed over the property to the customer. Such obligations may also be required by law. More about the accounting principle applied can be found in the section on IAS 11 in this note.

A provision is made for disputes related to completed projects if it is probable that a dispute will result in an outflow of resources from the Group. Disputes related to ongoing projects are taken into consideration in the valuation of the project and are thus not included in the item "Reserve for legal disputes," which is reported in Note 29.

Provisions for restructuring expenses are recognized when a detailed restructuring plan has been adopted and the restructuring has either begun or been publicly announced.

When accounting for interests in joint ventures and associated companies, a provision is made when a loss exceeds the carrying amount of the holding and the Group has a payment obligation.

Contingent liabilities

Contingent liabilities are possible obligations arising from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more future events not wholly within the control of the company. Also reported as contingent liabilities are obligations arising from past events that have not been recognized as a liability because it is not likely that an outflow of resources will be required to settle the obligation, or the size of the obligation cannot be estimated with sufficient reliability.

The amounts of contract fulfillment guarantees are included until the contracted work has been transferred to the customer, which normally occurs upon its approval in a final inspection. If the guarantee covers all or most of the contract sum, the amount of the contingent liability is calculated as the contract sum minus the value of the portion performed. In cases where the guarantee only covers a small portion of the contract sum, the guarantee amount remains unchanged until the contracted work is handed over to the customer. The guarantee amount is not reduced by being offset against payments not yet received from the customer. Guarantees that have been received from subcontractors and suppliers of materials are not taken into account either. If the Group receives reciprocal guarantees related to external consortium members' share of joint and

several liability, these are not taken into account. Tax cases, court proceedings and arbitration are not included in contingent liability amounts. Instead, a separate description is provided.

In connection with contracting assignments, security is often provided in the form of a completion guarantee from a bank or insurance institution. The issuer of the guarantee, in turn, normally receives an indemnity from the contracting company or other Group company. Such indemnities related to the Group's own contracting assignments are not reported as contingent liabilities, since they do not involve any increased liability compared to the contracting assignment.

Note 33 presents information about contingent liabilities.

Contingent assets

Contingent assets are possible assets arising from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the company.

In the Group's construction operations, claims for additional compensation from the customer are not uncommon. If the right to additional compensation is confirmed, this affects the valuation of the project when reporting according to IAS 11. As for claims that have not yet been confirmed, it is not practicable to provide information about these, unless there is an individual claim of substantial importance to the Group.

Assets pledged

Shares in joint ventures within the Infrastructure Development business stream are reported as assets pledged when the shares in the project company, which may be directly owned by Skanska or owned via an intermediate holding company, are pledged as collateral for loans from banks or lenders other than the co-owners.

Note 33 provides information about assets pledged.

IAS 19 Employee Benefits

This accounting standard makes a distinction between defined-contribution and defined-benefit pension plans. Defined-contribution pension plans are defined as plans in which the company pays fixed contributions into a separate legal entity and has no obligation to pay further contributions, even if the legal entity does not have sufficient assets to pay all employee benefits relating to their service until the closing day. Other pension plans are defined-benefit plans. Calculation of defined-benefit pension plans according to IAS 19 is carried out in a way that often deviates from local rules in each country. Obligations and costs are to be calculated according to the "projected unit credit method." The purpose is to recognize expected future pension disbursements as expenses in a way that yields more uniform expenses over the employee's period of employment. Actuarial assumptions about the discount rate, wage or salary increases, inflation and life expectancy are taken into account in the calculation. Pension obligations for post-employment benefits are discounted to present value. Discounts are calculated for all three countries where Skanska has defined-benefit pension plans using an interest rate based on the market return on high quality corporate bonds including mortgage bonds, with maturities matching the pension obligations. Pension plan assets are recognized at fair value on the closing day. In the statement of financial position, the present value of pension obligations is recognized after subtracting the fair value of plan assets. The pension expense and the return on plan assets recognized in the income statement refer to the pension expense and return estimated on January 1. The return on plan assets is calculated using the same interest rate as is used to discount the pension obligations. Any differences compared to actual pension expense and actual return, as well as effects of changed assumptions, together constitute remeasurements and are reported in "Other comprehensive income."

If the terms of a defined-benefit plan are significantly amended, or the number of employees covered by a plan is significantly reduced, a curtailment occurs. Obligations are recalculated according to the new conditions. The effect of the curtailment is recognized in profit or loss.

When there is a difference between how pension expense is determined in a legal entity and the Group, a provision or receivable is recognized for the difference for taxes and social insurance contributions based on the company's pension expenses. The provision or receivable is not calculated at present value, since it is based on present-value figures.

Deferred taxes and social insurance contributions on remeasurements are recognized under "Other comprehensive income."

Obligations related to contributions to defined-contribution plans are recognized as expenses in the income statement as they arise.

The Group's net obligation related to other long-term employee benefits, aside from pensions, amounts to the value of future benefits that employees have earned as compensation for the services they have performed during the current and prior periods. The obligation is calculated using the projected unit credit method and is discounted to present value, and the fair value of any plan assets is subtracted. The discount rate is again based on the yield on high quality corporate bonds including mortgage bonds, or government bonds, with a maturity matching the maturity of the obligations.

A provision is recognized in connection with termination of employees' employment only if the company is obligated through its own detailed formal termination plan – and there is no realistic possibility of annulling the plan – to end employment before the normal date, or when benefits are offered in order to encourage voluntary resignation. In cases where the company terminates employees' employment, the provision is calculated on the basis of a detailed plan that includes at least the location, function and approximate number of employees affected, as well as the benefits for each job category or position and the time at which the plan will be implemented.

Only an insignificant percentage of the Group's defined-benefit pension obligations were financed by premiums to the retirement insurance company Alecta. Since the required figures cannot be obtained from Alecta, these pension obligations are reported as a defined-contribution plan. Since the same conditions apply to the new AFP plan in Norway, this is also reported as a defined-contribution plan.

IFRS 2 Share-based Payment

The Seop 2 and Seop 3 employee ownership programs are recognized as share-based compensation settled with equity instruments in compliance with IFRS 2. This means that the fair value is calculated on the basis of expected fulfillment of targets. This value is allocated over the respective vesting period. After the fair value is established, there is no reappraisal during the remainder of the vesting period, except in the case of changes in the number of shares because the condition of continued employment during the vesting period is no longer met.

Social insurance contributions

Social insurance contributions that are payable in connection with share-based payments are reported in compliance with statement UFR 7 from the Swedish Financial Reporting Board. The cost of social insurance contributions is allocated over the period when the services are performed. The provision that arises is reappraised on each financial reporting date to correspond to the estimated contributions that are due at the end of the vesting period.

IAS 7 Statement of Cash Flows

In preparing its cash-flow statement, Skanska applies the indirect method in compliance with the accounting standard. Aside from cash and bank balance flows, cash and cash equivalents are to include short-term investments whose conversion into bank balances may occur in an amount most of which is known in advance. Short-term investments with maturities of less than three months are regarded as cash and cash equivalents. Cash and cash equivalents that are subject to restrictions are reported either as current receivables or as non-current receivables.

In addition to the cash-flow statement prepared in compliance with the standard, the Report of the Directors presents an operating cash-flow statement that does not conform to the structure specified in the standard. The operating cash-flow statement was prepared on the basis of the operations that the different business streams carry out.

IAS 33 Earnings per Share

Earnings per share are reported directly below the consolidated income statement and are calculated by dividing the portion of profit for the year that is attributable to the Parent Company's equity holders (shareholders) by the average number of shares outstanding during the period.

For Seop 3 employee ownership programs, the dilution effect is calculated by adding potential ordinary shares to the number of ordinary shares before dilution. The calculation of potential ordinary shares occurs in two stages. First there is an assessment of the number of shares that may be issued when established targets are reached. The number of shares for the respective program year is then

determined the following year, provided that the condition of continued employment is met. In the next step, the number of potential ordinary shares is reduced by the value of the consideration that Skanska is expected to receive, divided by the average market price of a share during the period.

IAS 24 Related Party Disclosures

According to this accounting standard, information must be provided about transactions and agreements with related companies and physical persons. In the consolidated financial statements, intra-Group transactions fall outside this reporting requirement. Notes 36, 37 and 39 provide disclosures in accordance with the accounting standard. With respect to the Parent Company, this information is provided in Notes 62 and 63.

IAS 40 Investment Property

Skanska does not report any investment properties. Properties that are used in the Group's own operations are reported in compliance with IAS 16. The Group's holdings of current-asset properties are covered by IAS 2 and thus fall outside the application of IAS 40.

IFRS 8 Operating Segments

According to this standard, an operating segment is a component of the Group carrying out business operations whose operating income is evaluated regularly by the highest executive decision-maker and about which separate financial information is available.

Skanska's operating segments consist of its business streams: Construction, Residential Development, Commercial Property Development and Infrastructure Development.

The Senior Executive Team constitutes the Group's highest executive decision-making body.

The method used for segment reporting in the income statement of Residential Development and Commercial Property Development deviates from IFRS on two points. In segment reporting, a divestment gain is recognized on the date that a binding sales contract is signed. Segment reporting accounts for all joint ventures within Residential Development using the proportional method. Note 4 presents a reconciliation between segment reporting and the income statement in compliance with IFRS.

Note 4 provides information about operating segments. Financial reporting to the Senior Executive Team focuses on the areas for which each respective operating segment is operationally responsible: operating income in the income statement and capital employed. For each respective operating segment, the note thus reports external and internal revenue, cost of sales, selling and administrative expenses and capital employed. Capital employed refers to total assets minus tax assets and receivables invested in Skanska's treasury unit ("internal bank") less non-interest-bearing liabilities excluding tax liabilities. In the calculation of capital employed, a capitalized interest expense is removed from total assets for the Residential Development and Commercial Property Development segments. Acquisition goodwill is reported in the operating segment to which it relates.

In transactions between operating segments, prices are set on market terms.

Certain parts of the Group do not belong to any operating segment. These are reported in Note 4 under the heading "Central and eliminations." This includes the Latin American operations, where there are no longer any ongoing projects. Operating segment income includes intra-Group profits and, consequently, these are eliminated during reconciliation with the consolidated income statement and the consolidated statement of financial position.

In addition to information about operating segments, Note 4 provides disclosures on external revenue for the entire Group, broken down into Sweden, the U.S. and other countries, and disclosures on the allocation of certain assets between Sweden and other countries.

IAS 10 Events After the Reporting Period

Events after the end of the reporting period may, in certain cases, confirm a situation that existed on the closing day. Such events are taken into account when the financial reports are prepared. Information is provided about other events that occur after the closing day and before the financial report is signed if the omission of such information would affect the ability of a reader to make an accurate assessment and a sound investment decision.

Such information is provided in Note 41 and Note 66.

IAS 32 Financial Instruments: Presentation

Offsetting of financial assets and financial liabilities occurs when a company has a legal right to offset items against each other and intends to settle these items with a net amount, or simultaneously divest the asset and settle the liability.

Prepaid income and expenses are not financial instruments. Accrued income and expenses that are related to the business are not recognized as financial instruments. Thus, gross amounts due from (or to) customers for contract work are not included under financial instruments. Obligations for employee benefit plans in compliance with IAS 19, such as pension plans, are exempt from IAS 32 and are thus not recognized as financial instruments. Assets and liabilities that are not based on contracts, such as income taxes, are not considered financial instruments.

Information in compliance with the accounting standard is provided mainly in Notes 6, 21 and 27.

IAS 39 Financial Instruments: Recognition and Measurement

The accounting standard deals with measurement and recognition of financial instruments. Categories exempt from application according to IAS 39 include holdings in subsidiaries, associated companies and joint ventures, leases, the rights under employment contracts, treasury shares, and financial instruments as described in IFRS 2.

All financial instruments covered by this standard, including all derivatives, are reported in the statement of financial position.

A derivative is a financial instrument whose value changes in response to changes in an underlying variable, that requires no initial investment or one that is small and that is settled at a future date. An embedded derivative is a contract condition that causes the value of the contract to be affected in the same way as if the condition were an independent derivative. This is the case, for example, when a construction contract is expressed in a currency that is a foreign currency for both parties. If it is customary for the foreign currency to be used for this type of contract, the embedded derivative will not be separated. A reassessment of whether embedded derivatives are to be separated from the host contract is carried out only if the host contract is changed.

A financial asset or financial liability is recognized in the statement of financial position when the Group becomes a party to the contractual provisions of the instrument. Trade accounts receivable are recognized in the statement of financial position when an invoice has been sent. A liability is recognized when the counterparty has performed and there is a contractual obligation to pay, even if the invoice has not yet been received. Trade accounts payable are recognized when an invoice has been received.

A financial asset is derecognized from the statement of financial position when the contractual rights are realized or expire, or the Group loses control of them. The same applies to a portion of a financial asset. A financial liability is derecognized from the statement of financial position when the contractual obligation is fulfilled or otherwise extinguished. The same applies to a portion of a financial liability.

Acquisitions and divestments of financial assets are recognized on the transaction date, which is the date the company undertakes to acquire or divest the asset.

Financial instruments are initially recognized at cost, equivalent to the instrument's fair value plus transaction costs, except instruments in the category "assets at fair value through profit or loss," which are recognized exclusive of transaction costs. Recognition then occurs depending on how they are classified, as described below.

Financial assets are classified as "assets at fair value through profit or loss," "held-to-maturity investments," "loans and receivables" and "available-for-sale assets." An asset is classified among "available-for-sale assets" if the asset is not a derivative and the asset has not been classified in any of the other categories. Derivatives are classified under "assets at fair value through profit or loss" unless they are included in hedge accounting. Equity instruments with unlimited useful lives are classified either as "assets at fair value through profit or loss" or "available-for-sale assets."

"Assets at fair value through profit or loss" and "available-for-sale assets" are measured at fair value in the statement of financial position. Changes in the value of "assets at fair value through profit or loss" are recognized in the income statement, while changes in the value of "available-for-sale assets" are recognized under "Other comprehensive income." When the latter assets are divested, accumulated gains or losses are transferred to the income statement. Investments in holdings of companies other than Group companies, joint ventures

and associated companies are included in "available-for-sale assets," but are measured at cost, unless the fair value can be reliably established. Impairment losses on "available-for-sale assets," as well as interest and dividends on instruments in this category, are recognized directly in the income statement. Changes in exchange rates for monetary "available-for-sale assets" are also recognized directly in the income statement, while changes in exchange rates for non-monetary "available-for-sale assets" are recognized in other comprehensive income. "Held-to-maturity investments" and "loans and receivables" are measured at amortized cost. Impairment losses on "held-to-maturity investments," "loans and receivables" and "available-for-sale assets" occur when the expected discounted cash flow from the financial asset is less than the carrying amount.

Financial liabilities are classified as "liabilities at fair value through profit or loss" and "other financial liabilities." Derivatives are classified under "liabilities at fair value through profit or loss" unless included in hedge accounting.

"Liabilities at fair value through profit or loss" are measured at fair value in the statement of financial position, with change of value recognized in the income statement. "Other financial liabilities" are measured initially at the amount borrowed less any transaction costs. The liabilities are thereafter measured at amortized cost. Any differences between the amount borrowed and the repayment amount are recognized in profit for the year, allocated over the loan period and applying the effective-interest method. This method involves calculating the effective interest rate, which is the interest rate that exactly discounts estimated future receipts and payments over the term of the instrument to the recognized net value of the financial asset or liability.

In reporting both financial assets and financial liabilities in Note 6, Skanska has chosen to report "Hedge-accounted derivatives" separately.

Skanska uses hedge accounting for cash flow hedging and hedging of net investment in foreign operations. The effectiveness of hedging is assessed regularly, and hedge accounting is applied only to hedging deemed effective. If hedging is not deemed effective, the amount is adjusted for the hedging instrument.

Skanska uses currency derivatives and foreign currency loans to hedge against fluctuations in exchange rates. Recognition of derivatives varies depending on whether hedge accounting in compliance with IAS 39 is applied or not.

Unrealized gains and losses on currency derivatives related to hedging of operational transaction exposure (cash-flow hedging) are measured in market terms and recognized at fair value in the statement of financial position. The entire change in value is recognized directly in operating income, except in cases where hedge accounting is applied. In hedge accounting, unrealized gain or loss is recognized under "Other comprehensive income." When the hedged transaction occurs and is recognized in the income statement, accumulated changes in value are transferred from other comprehensive income to operating income.

Embedded currency derivatives in commercial contracts expressed in a currency which is a foreign currency for both parties are measured at fair value, provided that the currency is not customary for this type of contract.

Unrealized gains and losses when assessing the fair value of these embedded currency derivatives are recognized at fair value in the statement of financial position. Changes in fair value are recognized in operating income.

Currency derivatives for hedging translation exposure are measured at fair value in the statement of financial position. Foreign currency loans for hedging translation exposure are measured at the closing day exchange rate. Due to the application of hedge accounting, exchange-rate differences after taking into account the tax effect are recognized under "Other comprehensive income." If foreign operations are divested, accumulated exchange-rate differences attributable to the operations are transferred from other comprehensive income to the income statement. The interest component and changes in the value of the interest component of currency derivatives are recognized as financial income or expenses.

In Infrastructure Development projects, interest-rate derivatives are used in order to achieve fixed interest on long-term financing. Hedge accounting is applied to these interest-rate derivatives.

Skanska also uses interest-rate derivatives to hedge against fluctuation in interest rates.

Hedge accounting in compliance with IAS 39 is applied to some of these derivatives.

Unrealized gains and losses on interest-rate derivatives are recognized at fair value in the statement of financial position. Where hedge accounting is applied, changes in value are recognized in other comprehensive income. In cases where hedge accounting is not applied, changes in value are directly recognized as financial

income or expenses in the income statement. The ongoing current-interest coupon portion is recognized as interest income or an interest expense.

IFRS 7 Financial Instruments: Disclosures

The company provides disclosures that enable the evaluation of the significance of a financial instrument's financial position and performance. The disclosures also enable an evaluation of the nature and extent of risks arising from financial instruments to which the company is exposed during the period and at the end of the reporting period. These disclosures also provide a basis for assessing how these risks are managed by the company. This standard supplements the principles for recognizing, measuring and classifying financial assets and liabilities in IAS 32 and IAS 39.

The standard applies to all types of financial instruments, with the primary exception of holdings in subsidiaries, associated companies and joint ventures as well as obligations for employee benefit plans in compliance with IAS 19, such as pension plans. The disclosures that are provided thus include accrued interest income, deposits and interest expense. Accrued income from customers for contract work is not a financial instrument.

The disclosures provided are supplemented by reconciliation with other items in the income statement and in the statement of financial position.

Disclosures in compliance with this accounting standard are presented in Note 6.

IAS 20 Accounting for Government Grants and Disclosure of Government Assistance

"Government assistance" refers to action by the government designed to provide an economic benefit specific to one company or a category of companies that qualify based on certain criteria. Government grants are assistance from the government in the form of transfers of resources to a company in return for past or future compliance with certain conditions relating to its operations.

Government grants are recognized in the statement of financial position as prepaid income or reduction of an investment when there is reasonable assurance that the grants will be received and that the Group will meet the criteria associated with the grant.

The Swedish Financial Reporting Board's recommendation RFR 1 Supplementary Accounting Regulations for Groups

The recommendation specifies what further disclosures must be provided in order for the annual accounts to comply with Sweden's Annual Accounts Act. The additional information mainly concerns personnel-related disclosures.

Disclosure on the number of employees, gender distribution and distribution among countries is provided in Note 36. The number of employees during the year was calculated as an average of the average number of employees during the quarters in the year. In this calculation, part-time employment is equivalent to 60 percent of full-time employment. Operations divested during the year are not included.

Disclosure on the gender distribution among senior executives refers to the situation on the closing day. "Senior executives" in the various subsidiaries refers to the members of the management team of the respective Business Units. The information is provided in Notes 36 and 37.

In addition to Board members and the President and CEO, all other persons in the Group's Senior Executive Team must be included in the group for which a separate account is to be provided of the total amounts of salaries and other remuneration, as well as expenses and obligations related to pensions and similar obligations. Furthermore, the same disclosures must be provided at an individual level for each of the Board members and for the President and CEO, as well as previous holders of these positions. Employee representatives are exempted.

Note 36 provides information about loans, assets pledged and contingent liabilities on behalf of members of the Skanska Group's Boards of Directors and Presidents and CEO.

Information must also be provided on remuneration to auditors and the public accounting firms where the auditors work. See Note 38.

Order bookings and order backlog

In contracting assignments, an order booking refers to a written order confirmation or signed contract, provided that financing has been arranged and construction is expected to commence within twelve months. If a previously received order is canceled in a subsequent quarter, the cancellation is recognized as a negative item when reporting order bookings for the quarter when the cancellation occurs.

Reported order bookings also include orders from Residential Development and Commercial Property Development, which assumes that a building permit has been obtained and construction is expected to begin within three months. For services related to fixed-price work, the order booking is recorded when the contract is signed, and for services related to cost-plus work, the order booking coincides with revenue. For service agreements, a maximum of 24 months of future revenue is included.

No order bookings are reported for Residential Development and Commercial Property Development.

Order backlog refers to the difference between order bookings for a period and accrued revenue (accrued project expenses plus accrued project income adjusted for loss provisions) plus order backlog at the beginning of the period.

The order backlog in the accounts of acquired subsidiaries on the date of acquisition is not reported as order bookings, but is included in order backlog amounts.

Market appraisal

Commercial Property Development

Note 22 provides the estimated market value of Skanska's current-asset properties. For completed commercial properties and for development properties, the market value for the majority of properties has been calculated in cooperation with external appraisers. The market value of ongoing projects is estimated internally. The calculated market value of ongoing projects refers to each property once it is completed and fully occupied.

Residential Development

In appraising properties in Residential Development, estimates of market value take into account the value that can be obtained within the customary economic cycle and refer to properties once they are completed.

Infrastructure Development

Skanska obtains an estimated value for infrastructure projects by discounting estimated future cash flows in the form of dividends and repayments of loans and equity by a discount rate based on country, risk model and project phase for the various projects. The discount rate chosen is applied to all future cash flows starting on the appraisal date. The most recently updated financial model is used as a base. This financial model describes all cash flows in the project and serves as the ultimate basis for financing, which is carried out with full project risk and without guarantees from Skanska. For the wind-farm projects, Mullbergs Vindpark AB and Sjösjöka Vind AB, the holdings have been written down to a value that is below acquisition cost.

An estimated value is stated solely for projects that have reached contractual and financial close. All flows are appraised – investments in the project (equity and subordinated debenture loans), interest on repayments of subordinated loans, as well as dividends to and from the project company. Today all investments except New Karolinska Solna, Sjösjöka Vind and Mullbergs Vindpark are denominated in currencies other than Swedish kronor, and there is thus also an exchange-rate risk.

Estimated values have been calculated in part in consultation with external appraisers and are stated in Note 20.

The only impact on the Parent Company of changes to the Annual Accounts Act during the year has been the need to edit portions of the text in the Report of the Directors and the notes.

Note 1. Parent Company accounting and valuation principles

The Parent Company has prepared its annual accounts in compliance with the Annual Accounts Act and the Swedish Financial Reporting Board's Recommendation RFR 2, "Accounting for Legal Entities." According to RFR 2, the annual accounts of the legal entity must apply the International Financial Reporting Standards (IFRS) and International Accounting Standards (IAS) issued by the International Accounting Standards Board (IASB), to the extent these have been approved by the EU, as well as the interpretations by the IFRS Interpretations Committee and its predecessor the Standing Interpretations Committee (SIC), as far as this is possible within the framework of the Annual Accounts Act and taking into account the connection between accounting and taxation. A presentation of the various accounting standards can be found in the Group Note 1. The statements of the Swedish Financial Reporting Board must also be applied.

In accordance with RFR 2, IAS 39 is not applied to financial guarantee agreements benefiting subsidiaries, associated companies and joint ventures. Instead, IAS 37 is applied, which normally means that some provisions for these measures are not recognized, since it is unlikely that an outflow of resources will be required to settle the obligation.

Group contributions are recognized in accordance with the general rule in RFR 2.

The Seop 2 and Seop 3 employee ownership programs are recognized as share-based compensation settled with equity instruments, in compliance with IFRS 2. The portion of the Group's expense for these employee ownership programs that is related to employees of subsidiaries is recognized in the Parent Company as an increase in the carrying amount of holdings in subsidiaries and an increase in equity. When the amount to be debited to the subsidiary is established, a transfer of receivables to subsidiaries takes place. Where compensation from subsidiaries for shares that have been allocated deviates from the previously reported increase in the carrying amount of holdings in subsidiaries, the carrying amount of holdings in subsidiaries is reduced to the portion of the amount that does not exceed the previously reported increase. Any remaining part of the compensation is recognized directly as equity.

Important differences compared to consolidated accounting principles

The income statement and balance sheet conform to the presentation formats in the Annual Accounts Act.

Defined-benefit pension plans are reported according to the regulations in the Pension Obligations Vesting Act. Pension obligations secured by assets in pension funds are not recognized in the balance sheet.

Similar to holdings in subsidiaries, holdings in associated companies and joint arrangements are also carried at cost before any impairment losses.

Note 2. Key estimates and judgments

Key estimates and judgments

The Senior Executive Team has discussed with the Board of Directors and the Audit Committee the developments and disclosures relating to the Group's important accounting principles and estimates, as well as the application of these principles and estimates.

Some important accounting-related estimates that were made when applying the Group's accounting principles are described below.

Goodwill impairment testing

When calculating the recoverable amount of cash-generating units to determine if there is any goodwill impairment, several assumptions about future conditions and estimates of parameters have been made. These are presented in Note 18 Goodwill. As understood from the description in this note, important changes in the basis for these assumptions and estimates might have a substantial effect on the value of goodwill.

Note 2. Continued

Pension assumptions

Skanska has defined-benefit pension plans in a number of countries. The plans are recognized according to IAS 19, which means that pension commitments are calculated using actuarial assumptions and that plan assets are measured at market value on the closing day. The effects of changed actuarial assumptions and changes in the market value of plan assets are recognized as remeasurements in other comprehensive income. The remeasurements impact interest-bearing pension liabilities and equity.

The assumptions and prerequisites that provide the basis for recognition of pension liability, including a sensitivity analysis, are presented in Note 28 Pensions.

Percentage-of-completion method

Skanska applies the percentage-of-completion method. This means that, based on projected final project results, income is recognized successively during the course of the project according to degree of completion. In order to do this, the amount of project revenue and project expenses must be able to be reliably determined. This in turn requires that the Group has efficient, coordinated systems for calculation, forecasting and revenue/expense reporting. The method also requires consistent assessment (forecasts) of the final outcome of the project, including analysis of deviations from earlier assessments. This critical assessment is performed at least once every quarter. However, actual future project outcomes may deviate, either positively or negatively, from this assessment.

Disputes

Although management's best judgment is used in reporting disputed amounts, the actual future outcomes may deviate from the judgment made. See Note 33 Assets pledged, contingent liabilities and contingent assets, and Note 29 Provisions.

Investments in Infrastructure Development

The estimated investment amounts are provided in Note 20 B. Estimated market values are based on discounting anticipated cash flows for each respective investment. Estimated yield requirements for investments of this type have been used as the discount rates. Changes in anticipated cash flows, which in a number of cases extend 20 to 30 years into the future, and/or changes in yield requirements, may materially affect both estimated values and carrying amounts for each investment.

Current-asset properties

The stated combined market value in Note 22 is calculated on the basis of prevailing price levels in the respective location of the individual properties. Changes in the supply of similar properties, as well as changes in demand due to changed yield requirements, may materially affect both estimated market values and carrying amounts for each property.

In Commercial Property Development, the estimated market value for ongoing projects is assessed for each property once it is completed and fully occupied.

In Residential Development the supply of capital and the price of capital for financing home buyers' investments are critical factors. The market value assessed here too is the value of the properties once they are completed and taking into account the value that may be added in a normal economic cycle.

Prices of goods and services

In the Skanska Group's operations, there are many different forms of contractual mechanisms. The degree of risk associated with the price of goods and services varies greatly depending on the contract type.

Sharp increases in material prices may pose a risk, particularly to long-term projects with fixed-price commitments. A shortage of human resources and certain input goods may also adversely impact operations. Delays in the design phase or changes in design are other circumstances that may adversely affect projects.

Note 3. Effects of changes in accounting principles

No changed accounting principles in 2016.

Note 4. Operating segments

Skanska's business streams – Construction, Residential Development, Commercial Property Development and Infrastructure Development – are recognized as operating segments. These business streams coincide with Skanska's operational organization, used by the Senior Executive Team to monitor operations. The Senior Executive Team (SET) is also Skanska's "chief operating decision maker."

Each business stream carries out distinct types of operations with different risks. Construction includes both building construction and civil construction. Residential Development develops residential projects for immediate sale. Homes are adapted for selected customer categories. The units in this segment are responsible for planning and selling projects. The construction assignments are performed by construction units in the Construction business stream in each respective market. Commercial Property Development initiates, develops, leases and divests commercial property projects. Project Development focuses on office buildings, retail and logistics properties. Construction assignments are performed in most markets by Skanska's Construction segment. Infrastructure Development specializes in identifying, developing and investing in privately financed infrastructure projects, such as highways, hospitals and airports. The business stream focuses on creating new potential projects, mainly in the markets where the Group has operations. Construction assignments are performed by the construction units where Skanska has construction operations.

Intra-Group pricing between operating segments is on market terms.

"Central" includes the cost of Group headquarters, earnings of central companies as well as operations that are being discontinued, and includes the Latin American operations where there are no remaining ongoing projects.

Depending on the circumstances, the discontinuation has either been in the form of divestments or completion of projects. At the end of 2016 some parts still remained to be discontinued.

Eliminations consist mainly of profits in Construction operations related to property projects.

See also Note 1 Consolidated accounting and valuation principles, IFRS 8, Operating Segments.

Revenue and expenses by operating segment

Each business stream has operating responsibility for its income statement down through "operating income."

Assets and liabilities by operating segment

Each business stream has operating responsibility for its capital employed. The capital employed by each business stream consists of its total assets minus tax assets and intra-Group receivables invested in Skanska's treasury unit ("internal bank") less non-interest-bearing liabilities excluding tax liabilities. In the calculation of capital employed, a capitalized interest expense is removed from total assets for the Residential Development and Commercial Property Development segments.

Acquisition goodwill has been reported in the business stream to which it belongs.

Cash flow by segment is presented as a separate statement: Consolidated operating cash flow statement and change in interest-bearing net receivables.

1 Of the "Other areas" item for intangible assets, SEK 1,415 M (1,285) was from Norwegian operations and SEK 1,585 M (1,784) from UK operations.

Note 5. Non-current assets held for sale and discontinued operations

Non-current assets held for sale and discontinued operations are recognized in compliance with IFRS 5. See Note 1 Accounting and valuation principles.

No operations were recognized as discontinued in 2016 or 2015.

At the end of 2016, there were no non-current assets that were recognized in compliance with IFRS 5 as current assets and specified as assets held for sale.

Nor were there any such non-current assets in 2015.

Note 6. Financial instruments and financial risk management

Financial instruments are reported in compliance with IAS 39 Financial Instruments: Recognition and Measurement, IFRS 32 Financial Instruments: Presentation and IFRS 7 Financial Instruments: Disclosures.

Skanska's receivables from and liabilities to clients for contract work are not recognized as a financial instrument and the risk associated with these receivables and liabilities is thus not reported in this note.

Risks in partly-owned joint venture companies in Infrastructure Development are managed within each respective company. Skanska's aim is to ensure that financial risk management within these companies is equivalent to that which applies to the Group's wholly owned companies. Management of the interest-rate risk in financing is essential in each respective company, because the contract period in many cases amounts to decades. This risk is managed with the help of long-term interest-rate swaps. These holdings are reported according to the equity method of accounting. As a result, the financial instruments in each company are included under the item "Income from joint ventures and associated companies." Disclosures on financial instruments in associated companies and joint ventures are not included in the following disclosures.

Financial Risk Management

Through its operations, aside from business risk, Skanska is exposed to various financial risks such as credit risk, liquidity risk and market risk. These risks arise in the Group's reported financial instruments such as cash and cash equivalents, interest-bearing receivables, trade accounts receivable, trade accounts payable, borrowings and derivatives.

Objectives and policy

The Group endeavors to achieve a systematic assessment of both financial and business risks. To do this a common risk management model is used. The risk management model does not involve avoidance of risk, but is instead aimed at identifying and managing the risks.

Through the Group's Financial Policy, each year the Board of Directors establishes guidelines, objectives and limits for financial management and administration of financial risk within the Group. This policy document regulates the distribution of responsibility among Skanska's Board, the Senior Executive Team, Skanska Financial Services (Skanska's internal financial unit) and the Business Units.

Within the Group, Skanska Financial Services has operational responsibility for securing Group financing and for managing liquidity, financial assets and financial liabilities. A centralized financial unit enables Skanska to take advantage of economies of scale and synergies.

The objectives and policy for each type of risk are described in the respective sections below.

Credit risk

Credit risk describes the Group's risk from financial assets and arises if a counterparty does not fulfill its contractual payment obligation to Skanska. Credit risk is divided into financial credit risk, which is risk associated with interest-bearing assets, and customer credit risk, which is risk relating to trade accounts receivable.

Financial credit risk – risk in interest-bearing assets

Financial credit risk is the risk that the Group is exposed to in its relationships with financial counterparties when investing surplus funds and with respect to bank account balances and investments in financial assets. Credit risk also arises when using derivative instruments and is the risk that a potential gain will not be realized if the counterparty does not fulfill its part of the contract.

In order to reduce the credit risk related to derivatives, Skanska has signed standardized netting (ISDA) agreements with all financial counterparties with which it enters into derivative contracts.

Skanska must limit its exposure to financial counterparties by using banks and financial institutions assigned a satisfactory rating by Standard & Poor's, Moody's or Fitch. The permitted exposure volume per counterparty is dependent on the counterparty's credit rating and the maturity of the exposure.

Maximum exposure is equivalent to the fair value of the assets and amounts to SEK 16,497 M (20,632). assets amounted to 0.2 (0.1) years as of December 31, 2016.

Customer credit risk – risk in trade accounts receivable

Customer credit risk is managed through Skanska Group's common procedures for identifying and managing risk: the Skanska Tender Approval Procedure (STAP) and the Operational Risk Assessment (ORA).

Skanska's credit risk with regard to trade accounts receivable has a high degree of risk diversification, due to the large number of projects of varying sizes and types with numerous different customer categories in a large number of geographical markets.

The portion of Skanska's operations related to construction projects extends only limited credit, since projects are invoiced in advance as much as possible. In other operations, the extension of credit is limited to customary invoicing periods.

Trade accounts receivable	Dec 31, 2016	Dec 31, 2015
Outstanding receivables	24,360	21,709
Impairment losses	-545	-1,071
Carrying amount	23,815	20,638

Change in impairment losses, trade accounts receivable	2016	2015
January 1	1,071	1,016
Impairment loss/reversal of impairment loss for the year	-373	104
Impairment losses settled	-187	-38
Exchange-rate differences	34	-11
December 31	545	1,071

Risk in other operating receivables including shares

Other financial operating receivables consist of receivables for properties divested, accrued interest income, deposits etc.

On the closing day no operating receivables were past due and there were no impairment losses.

Other financial operating receivables are reported by time interval with respect to when the amounts fall due in the future.

	2016	2015
Due within 30 days	9	9
Due in over 30 days but within one year	83	6
Due after one year	5	13
Total	97	28

Holdings with less than 20 percent of voting power in a company are reported as shares. Their carrying amount is SEK 44 M (61).

The shares are recognized at the lower of cost and fair value. No impairment losses were recognized on shares in either 2016 or 2015.

Liquidity and refinancing risk

Liquidity and refinancing risk is defined as the risk of Skanska not being able to meet its payment obligations due to lack of liquidity or due to difficulties in obtaining or rolling over external loans.

The Group uses liquidity forecasting as a means of managing the fluctuations in short-term liquidity.

Surplus liquidity is, if possible, to be used primarily to repay the principal on loan liabilities.

Note 6. Continued

Funding

Skanska has several borrowing programs – both committed bank credit facilities and market funding programs which provide good preparedness for temporary fluctuations in the Group's short-term liquidity requirements and ensure long-term funding.

In 2016 Skanska issued a total of SEK 2,115 M through the certificate program maturing in one to two months. At the end of the year the amount outstanding was SEK 1,315 M. SEK 1,500 M in medium term notes (MTN) matured during the year without being extended.

					2016		2015	
	Maturity	Currency	Limit	Nominal	Utilized	Nominal	Utilized	
Market funding programs								
Commercial paper (CP) program, maturities 0–1 years		SEK/EUR	SEK 6,000 M	6,000	1,315	6,000	900	
Medium Term Note (MTN) program, maturities 1–10 years		SEK/EUR	SEK 8,000 M	8,000	2,349	8,000	3,848	
				14,000	3,664	14,000	4,748	
Committed credit facilities								
Syndicated bank loan	2019	SEK/EUR/USD	EUR 555 M	5,312	0	5,090	0	
Bilateral loan agreement	2020	EUR	EUR 60 M	574	574	550	550	
Other credit facilities				401	0	415	8	
				6,287	574	6,055	558	

At year-end 2016, the Group's unutilized credit facilities totaled SEK 5,713 M (5,497).

Liquidity reserve and maturity structure

The objective is to have a liquidity reserve of at least SEK 4 billion available within one week in the form of cash liquidity or committed credit facilities. At year-end 2016, cash and cash equivalents and committed credit facilities amounted to about SEK 11 (17) billion, of which about SEK 10 (13) billion is available within one week.

The Group's policy is for the central borrowing portfolio's maturity structure to be distributed over time and for the portfolio to have a weighted average residual term of three years, including unutilized committed credit facilities, with authorization to deviate within a two to four year interval. On December 31, 2016 the average maturity of the borrowing portfolio was 2.0 (2.6) years, if unutilized credit facilities are taken into account.

Including interest payments, the maturity structure of the Group's financial interest-bearing liabilities and derivatives related to borrowing is distributed over the next few years according to the following table.

2016		Maturity					2015		Maturity				
Maturity period	Carrying amount	Future payment amount	Within 3 months	After 3 months within 1 years	After 1 year within 5 years	After 5 years	Maturity period	Carrying amount	Future payment amount	Within 3 months	After 3 months within 1 years	After 1 year within 5 years	After 5 years
Interest-bearing financial liabilities	10,172	10,309	1,689	5,041	3,572	7	Interest-bearing financial liabilities	10,184	10,412	1,233	5,352	3,810	17
Derivatives: Currency forward contracts							Derivatives: Currency forward contracts						
Inflow	-177	-4,342	-4,085	-255	-2	-	Inflow	-120	-9,551	-8,957	-584	-10	-
Outflow	48	4,295	4,046	247	2	-	Outflow	72	9,583	8,993	580	10	-
Derivatives: Interest rate swaps							Derivatives: Interest rate swaps						
Inflow	0	10	0	8	2	-	Inflow	0	-9	-1	2	-10	-
Outflow	116	108	24	32	52	-	Outflow	173	182	26	58	98	-
Total	10,159	10,380	1,674	5,073	3,626	7	Total	10,309	10,617	1,294	5,408	3,898	17

The average maturity of interest-bearing liabilities amounted to 1.1 (1.5) years.

Note 6. Continued

Other operating liabilities

Other operating liabilities that consist of financial instruments fall due for payment according to the table below.

Other operating liabilities	2016	2015
Due within 30 days	569	567
Due in over 30 days but within one year	112	155
Due after one year	13	5
Total	694	727

Market risk

Market risk is the Group's risk that the fair value of financial instruments or future cash flows from financial instruments will fluctuate due to changes in market prices. The main market risks in the consolidated accounts are interest-rate risk and foreign exchange rate risk.

Interest rate risk

Interest-rate risk is the risk that changes in interest rates will adversely affect the Group's financial items and cash flow (cash flow risk) or the fair value of financial assets and liabilities (fair value interest risk). For the Group, exposure to fair value interest-rate risk arises primarily from interest-bearing borrowing. To limit the risk, interest-rate maturities are to be distributed over time and have a weighted average remaining fixed interest period of two years, with authorization to deviate in +/−1 year. Change in fair value is measured on interest-bearing assets and liabilities including derivatives, partly by increasing the interest rate by one percentage point across all maturities and partly through a positive or negative change in the interest rate by half a percentage point. The change in fair value may not exceed SEK 150 M, measured as relative interest rate scenarios measured as relative deviation against a comparative portfolio with a weighted average refixing period of two years, which is identified as a risk-neutral maturity.

The fair value of interest-bearing financial assets and liabilities, plus derivatives, would, in the interest-rate scenario above, be changed within the range of SEK 49–58 M, assuming that the volume and fixing period is the same as of December 31, 2016.

Around SEK 27–37 M of this would affect financial items and around SEK 22 M would affect equity, through other comprehensive income, if hedge accounting were to be applied.

The relative interest-rate risk is SEK 11–37 M lower than in a comparative portfolio with a risk of SEK around 60–95 M and is attributable to the fact that the interest fixing period is shorter than the comparative portfolio's two years. All amounts are stated before tax.

The Group's cash flow risk must not exceed SEK 150 M over a 12-month period in the event of an increase of one percentage point in market interest rates.

Assuming the volume and interest fixing period are the same at year-end, an average increase in the market interest rate of one percentage point from the level at the end of the year would result in an estimated positive effect on the Group's financial items or around SEK 73 M for 2017.

The deviation of cash flow risk, fair value interest-rate risk and the fixed interest period are all within the authorized limits for the Group as of December 31, 2016.

The average rate refixing period for all of the Group's interest-bearing assets was 0.1 (0.1) years, taking derivatives into account. The interest rate for these was 0.58 (0.45) percent at year-end. Of the Group's total interest-bearing financial assets, 7 (32) percent carry fixed interest rates and 93 (68) percent variable interest rates.

The average interest rate refixing period for all interest-bearing liabilities, taking into account derivatives but excluding pension liabilities, was 0.6 (1.2) years.

The interest rate for interest-bearing liabilities amounted to 1.03 (1.22) percent at year-end. Taking into account derivatives, the interest rate was 1.25 (2.19) percent.

Of total interest-bearing financial liabilities, after taking into account derivatives, 52 (61) percent carry fixed interest rates and 48 (39) percent variable interest rates.

On December 31, 2016 there were outstanding interest-rate swap contracts amounting to a nominal value of SEK 3,836 M (5,076).

All of the contracts were entered into in order to swap the Group's borrowing from variable to fixed interest. Skanska applies hedge accounting for the majority of these interest-rate swaps. The hedges fulfill effectiveness requirements, which means that unrealized gains or losses are recognized under "Other comprehensive income."

The fair value of these hedges totaled SEK −68 M (−128) as of December 31, 2016. The fair value of interest-rate swaps for which hedge accounting is not applied totaled SEK −48 M (−45) on December 31, 2016. For these interest-rate swaps, changes in fair value are recognized through profit or loss. There were also interest-rate swap contracts in partly owned joint venture companies.

Foreign exchange rate risk

Foreign exchange rate risk is defined as the risk of a negative impact on the Group's income statement and statement of financial position due to fluctuations in exchange rates. This risk can be divided into transaction exposure, i.e. net operating and financial (interest/principal payment) flows, and translation exposure related to net investments in foreign subsidiaries.

Transaction exposure

Transaction exposure arises in a local unit when the unit's inflows and outflows of foreign currencies are not matched. Although the Group has a large international presence, its operations are mainly of a local nature in terms of foreign exchange rate risks, because project revenue and costs are mainly denominated in the same currency. If this is not the case, the objective is for each respective Business Unit to hedge its exposure in contracted cash flows against its functional currency in order to minimize the effect on earnings caused by shifts in exchange rates. The main tool for this purpose is currency-forward contracts.

The foreign exchange rate risk for the Group may amount to a total of SEK 50 M, with risk calculated as the effect on earnings of a five percentage point shift in exchange rates. As of December 31, 2016 foreign exchange rate risk accounted for SEK 35 M (35) of transaction exposure before tax.

Contracted net flows in currencies that are foreign to the respective Group company are distributed among currencies and maturities as follows.

The Group's contracted net foreign currency flow SEK M ¹	On December 31, 2016			On December 31, 2015		
	2017	2018	2019 and later	2016	2017	2018 and later
				2016	2017	2018 and later

Other currencies	-10	-1	-	7	-	-
Total equivalent value	-2,621	-407	-317	-2,131	-238	-157

¹ Flows in PLN, CZK, HUF and RON are mainly related to property development project expenses. Flows in EUR were mainly attributable to the construction operations in Sweden, Poland and the UK. Flows in GBP are mainly attributable to the New Karolinska Hospital (NKS) and the construction of the pan-European research facility European Spallation Source (ESS).

Note 6. Continued

Skanska mainly uses hedge accounting to hedge expenses in currencies other than the EUR in its European property development operations.

The fair value of these hedges totaled SEK -4 M (7) on December 31, 2016.

The hedges fulfill effectiveness requirements, which means that unrealized gains or losses are recognized under "Other comprehensive income."

The fair value of currency hedges for which hedge accounting is not applied totaled SEK 8 M (-5) on December 31, 2016, including the fair value of embedded derivatives. Changes in fair value are recognized through profit or loss.

Information on the changes recognized in the consolidated income statement and in other comprehensive income during the period can be found in the table "Impact of financial instruments on the consolidated income statement, other comprehensive income and equity" below.

Translation exposure

Skanska's policy stipulates that net investments in Commercial Property Development and Infrastructure Development operations are to be currency-hedged since the intention is to sell these assets over time. These hedges consist of forward currency contracts and foreign currency loans. The positive fair value of the forward currency contracts amounted to SEK 105 M (12) and their negative fair value amounted to SEK 0 M (0). The fair value of foreign currency loans amounted to SEK 590 M (141).

Net investments in other foreign currency subsidiaries are normally not hedged, unless the Board of Directors of Skanska AB decides otherwise.

At year-end 2016, about 20 percent of equity was currency hedged. A change in the exchange rate where the Swedish krona falls/rises by 10 percent against other currencies would have an effect of SEK +/-2.5 billion on other comprehensive income after tax and taking hedges into account.

Hedging of net investments outside Sweden

Currency	2016					2015				
	Net investments	Hedges ¹	Hedged portion, %	Net investments ²	Net investments, % ²	Net investments	Hedges ¹	Hedged portion, %	Net investments ²	Net investments, % ²

SEK and eliminations				3,913	14				1,791	7
Total				27,350	100				24,079	100

1 Hedged amount before subtracting tax portion.

2 After subtracting hedged portion.

Hedge accounting is applied when hedging net investments outside Sweden.

The hedges fulfill effectiveness requirements, which means that gains and losses on hedges are recognized under "Other comprehensive income" until the hedged transaction has taken place at which point the accumulated change in value is transferred to the income statement. See Note 34 Foreign exchange rates and effect of changes in foreign exchange rates.

Note 6. Continued

The Significance Of Financial Instruments To The Group's Financial Position And Income

Financial instruments in the statement of financial position

The following table presents the carrying amount of financial instruments allocated by category as well as a reconciliation with total assets and liabilities in the statement of financial position. Derivatives subject to hedge accounting are presented separately both as financial assets and financial liabilities.

See also Note 21 Financial assets, Note 24 Other operating receivables, Note 27 Financial liabilities and Note 30 Operating liabilities.

The difference between fair value and carrying amount for financial assets is marginal.

1 The carrying amount of financial assets excluding shares, totaling SEK 11,067 M (8,792), can be seen in Note 21 Financial assets.

2 See Note 24 Other operating receivables.

3 The shares are recognized at the lower of cost and fair value. Shares are reported in the consolidated statement of financial position among financial assets. See also Note 21 Financial assets.

4 In the consolidated statement of financial position, SEK 29,759 M (25,877) was reported as other operating receivables. See Note 24 Other operating receivables. Of this amount, trade accounts receivable accounted for SEK 23,815 M (20,638). These were reported as financial instruments. The remaining amount is SEK 5,944 M (5,239) and breaks down as SEK 97 M (28) for financial instruments and SEK 5,847 M (5,211) for non-financial instruments. The amount reported as financial instruments includes accrued interest income, deposits etc. Amounts reported as non-financial items include, for example, interim items other than accrued interest, VAT receivables, pension-related receivables and other employee-related receivables.

	0	0	15,780	15,780
Total financial instruments	133	128	26,123	26,384

The fair value is SEK 47 M (65) higher than the carrying amount for financial liabilities.

1 The carrying amount for financial liabilities totaling SEK 10,870 M (10,604) is reported in the statement of financial position along with financial liabilities of SEK 10,337 M (10,429) from Note 27 and contingent consideration of SEK 533 M (175) from Note 29. Contingent consideration is included in financial liabilities measured at fair value at SEK 0 M (16) and in financial liabilities measured at amortized cost at SEK 533 M (159). During the year SEK 16 M (22) of the contingent consideration was paid out, and SEK 0 M (16) accrued as interest income.

2 Other financial operating liabilities, totaling SEK 16,214 M (15,780), are reported in the statement of financial position together with trade accounts payable of SEK 15,520 M (15,053) and other financial instruments of SEK 694 M (727). The total item in the statement of financial position amounts to SEK 36,080 M (34,964). See Note 30. Accrued interest expense, checks issued but not cashed, liabilities for unpaid properties etc. are recognized as other financial operating liabilities. Other non-financial operating liabilities are, for example, interim items other than accrued interest, VAT liabilities, pension-related liabilities and other employee-related liabilities. Operating liabilities are measured at amortized cost.

Note 6. Continued

Reconciliation with statement of financial position	Dec 31, 2016	Dec 31, 2015
Equity and liabilities		
Financial instruments	27,084	26,384
Other liabilities		
Equity	27,506	24,206
Pensions	4,901	3,969
Tax liabilities	1,980	1,846

Net amount after netting arrangements	40,392	27,023	41,311	26,336

Financial assets and liabilities measured at fair value through profit or loss

Financial assets and liabilities at fair value through profit or loss belong to the category that has been identified as such on the first recognition date or consist of derivatives. The amounts for 2016 and 2015 are attributable to derivatives.

Hedge-accounted derivatives

Derivatives belong to the category "Financial assets and liabilities at fair value through profit or loss."

Skanska separately reports hedge-accounted derivatives.

The amounts for 2016 and 2015 are related to forward currency contracts for hedging of net investments outside Sweden, as well as interest-rate swaps for loan hedges with variable interest rates.

Fair value

There are three different levels for establishing fair value. The first level uses the official price quotation in an active market. The second level, which is used when a price quotation in an active market does not exist, calculates fair value by discounting future cash flows based on observable market interest rates for each respective maturity and currency. The third level uses substantial elements of input data that are not observable in the market.

Fair values for the categories "At fair value through profit or loss" and "Hedge-accounted derivatives" have been set according to the second level above. In calculating fair value in the borrowing portfolio, Skanska takes into account current market interest rates, which include the credit risk premium that Skanska is estimated to pay for its borrowing. In total assets totaling SEK 179 M (121) and liabilities totaling SEK 165 M (261) have been calculated according to this level.

The fair value of financial instruments with option elements is calculated using the Black-Scholes model. As of December 31, 2016, Skanska had no instruments with option elements.

Skanska's liabilities for contingent considerations are measured according to level three. All other financial assets and liabilities are measured according to level two.

Note 6. Continued

Collateral

The Group has provided collateral (assets pledged) in the form of financial receivables amounting to SEK 1,021 M (1,328). Also see Note 33 Assets pledged, contingent liabilities and contingent assets. These assets may be utilized by customers if Skanska does not fulfill its obligations according to the respective construction contract.

To a varying extent, the Group has obtained collateral for trade accounts receivable in the form of guarantees issued by banks and insurance companies and, in some cases, in the form of guarantees from the parent companies of customers.

Note 7. Business combinations

Business combinations (acquisitions of businesses) are reported in compliance with IFRS 3 Business Combinations. See "Accounting and valuation principles" in Note 1.

Acquisitions of Group companies/operations

No acquisitions were made in 2016 or 2015.

Note 8. Revenue

Projects within Skanska's contracting operations are reported in compliance with IAS 11 Construction Contracts. See Note 9.

Revenue other than project revenue is recognized in compliance with IAS 18 Revenue. See Note 1 Accounting and valuation principles.

Revenue by business stream

	2016	2015
Construction	138,001	140,648
Residential Development	7,571	8,724

Commercial Property Development	-5,426	-6,086
Infrastructure Development ¹		
Intra-Group property divestments	-9	-12
Other	-963	-1,103
	-11,592	-11,457

¹ Construction includes SEK 7,220 M (6,045) in intra-Group construction for Infrastructure Development. Elimination does not occur since this revenue consists of invoices issued to joint ventures, which are recognized according to the equity method of accounting.

Revenue by category

	2016	2015
Construction contracts	123,095	126,128
Services	3,066	6,168
Sales of goods	2,061	1,626
Rental income	594	603
Property divestments	16,549	18,524
Total	145,365	153,049

As for other types of revenue, dividends and interest income are recognized in financial items. See Note 14 Financial items.

Other matters

Invoices issued to associated companies and joint ventures amounted to SEK 7,310 M (6,381). For other related party transactions, see Note 39 Related party disclosures.

Note 9. Construction contracts

Construction contracts are recognized as revenue as projects progress to completion. See Note 1 Accounting and valuation principles.

For risks in ongoing assignments, see Note 2 Key estimates and judgments, and the Report of the Directors.

Information from the income statement

Revenue recognized during the year amounted to SEK 123,095 M (126,128).

Information from the statement of financial position

Receivables due from clients for contract work	Dec 31, 2016	Dec 31, 2015
Accrued revenue	184,109	119,139
Invoiced revenue	-178,358	-113,447
Total assets	5,751	5,692
 Liabilities payable to customers for contract work	 Dec 31, 2016	 Dec 31, 2015
Invoiced revenue	301,316	265,327
Accrued revenue	-282,843	-249,506
Total liabilities	18,473	15,821

Accrued revenue in ongoing projects including recognized gains minus recognized loss provisions amounted to SEK 466,952 M (368,645).

Advance payments received totaled SEK 1,771 M (1,055).

Amounts retained by customers, which have been partly invoiced according to an established plan and which the client is retaining in accordance with contractual terms until all the conditions specified in the contract are met, amounted to SEK 4,404 M (4,535).

Note 10. Operating expenses by category of expense

In 2016, revenue increased by SEK 7,684 M to SEK 145,365 M (153,049). Operating income increased by SEK 930 M, to SEK 7,220 M (6,290). Personnel expenses for the year amounted to SEK -27,879 M (-29,994).

Other operating expenses adjusted for current-asset properties divested and income in joint ventures and associated companies amounted to SEK -98,652 M (-102,344).

	2016	2015
Revenue	145,365	153,049
Personnel expenses ¹	-27,879	-29,994
Depreciation/amortization	-1,439	-1,579

Total expenses	-138,145	-146,759
 Operating income	 7,220	 6,290

¹ Personnel expenses include salaries and other remuneration of 21,778 (23,582), social insurance contributions of 5,531 (5,890) recognized according to Note 36 Personnel, as well as non-monetary remuneration such as company car benefits and shares received under Seop amounting to 570 (522).

² Other includes purchased materials, machinery rentals and subcontractors.

Note 11. Selling and administrative expenses

Selling and administrative expenses are recognized as one item.
See Note 1 Accounting and valuation principles.

Selling and administrative expenses	2016	2015
Construction	-6,567	-6,198
Residential Development	-559	-550
Commercial Property Development	-751	-677
Infrastructure Development	-147	-156
Central expenses ¹	-1,128	-1,288
Total	-9,152	-8,869

¹ Including eliminations.

Note 12. Depreciation/amortization

Depreciation and amortization are carried out in compliance with IAS 16 Property, Plant and Equipment, and IAS 38 Intangible Assets. See Note 1 Accounting and valuation principles.

Depreciation and amortization are presented below by business stream. For further information on depreciation and amortization, see Note 17 Property, plant and equipment, and Note 19 Intangible assets.

Depreciation/amortization by asset class and business stream

	Construction	Residential Development	Commercial Prop- erty Development	Infrastructure Develop- ment	Central and eliminations	Total
2016

Total	-1,467	-2	-6	-5	-99	-1,579

Note 13. Impairment losses/reversals of impairment losses

Impairment losses are recognized in compliance with IAS 36 Impairment of Assets. See Note 1 Accounting and valuation principles.

Impairment losses on current-asset properties are recognized in compliance with IAS 2 Inventories.

Impairment loss/reversals of impairment losses are presented below by business stream.

For further information on impairment losses/reversals of impairment losses, see Note 17 Property, plant and equipment, Note 18 Goodwill, Note 19 Intangible assets and Note 22 Current-asset properties/project development.

Impairment losses/reversals of impairment losses by asset class and business stream

Change in market value	-3	-32
Net exchange-rate differences	-24	-96
Other financial items	-41	-87
	-238	-441
Total	-119	-314

Disclosures on the portion of income and expenses in financial items that comes from financial instruments are presented in Note 6 Financial instruments and financial risk management.

Net interest items

Financial items amounted to SEK -119 M (-314). Net interest items improved to SEK -99 M (-138). Interest income decreased to SEK 71 M (88), mainly due to lower market interest rates. Interest expense before capitalized interest improved to SEK -245 M (-327), which was mainly attributable to lower borrowing volumes as well as lower interest rates on loans. During the year, Skanska capitalized interest expenses of SEK 176 M (194) in ongoing projects for its own account. Interest income was received at an average interest rate of 0.49 (0.53) percent. Interest expense, excluding interest on pension liability, was paid at an average interest rate of 1.21 (1.65) percent during the year. Taking into account derivatives, the average interest rate was 2.04 (2.32) percent.

Net interest on pensions, which refers to the estimated net amount of interest expenses related to defined-benefit pension obligations and return on pension plan assets on January 1, 2016, based on the outcome in 2015, fell to SEK -101 M (-93). See also Note 28 Pensions.

The Group had net interest items of SEK 3 M (4) that were recognized in operating income. See Note 1 Accounting and valuation principles.

Change in market value

The change in market value amounted to SEK 2 M (-25) and the increase is mainly due to lower interest expense relating to hedging of investments in foreign subsidiaries, as most of the hedges were divested at the end of 2015.

Other financial items

Other financial items totaled SEK -41 M (-87) and mainly consisted of various fees for credit facilities and bank guarantees.

Note 15. Borrowing costs

Borrowing costs relating to investments that require a substantial period for completion are capitalized. See accounting and valuation principles in Note 1.

In 2016, borrowing costs were capitalized at an interest rate of around 1.5 (1.5) percent.

	Capitalized interest during the year		Total accumulated capitalized interest included in	
	2016	2015	2016	2015
Current-asset properties	176	194	245	234
Total	176	194	245	234

Note 16. Income taxes

Income taxes are reported in compliance with IAS 12 Income Taxes. See Note 1 Accounting and valuation principles.

Tax expense

	2016	2015
Current taxes	-969	-1,003
Deferred tax assets/expenses from change in temporary differences	-385	9
Deferred tax expenses from change in loss carryforwards	82	-120
Taxes in joint ventures	-94	-71
Total	-1,366	-1,185

Tax items recognized under other comprehensive income

	2016	2015
Deferred taxes attributable to cash flow hedges	-4	-15
Deferred taxes attributable to pensions	189	-175
Total	185	-190

There was no deferred tax attributable to the category "available-for-sale financial assets."

Relationship between taxes calculated after aggregating nominal tax rates and recognized taxes

The Group's recognized tax rate amounted to 19 (20) percent.

The Group's aggregated nominal tax rate was estimated at 26 (23) percent.

The average nominal tax rate in Skanska's home markets in Europe amounted to about 21 (21) percent, and in the U.S., just over 40 (40) percent, depending on the allocation of income between the different states.

The relationship between taxes calculated after aggregating nominal tax rates of 26 (23) percent and recognized taxes of 19 (20) percent is explained in the table below.

	2016	2015
Income after financial items	7,101	5,976
Tax according to aggregation of nominal tax rates, 26 (23) percent	-1,846	-1,374
Tax effect of:		
Property divestments ¹	366	353
Divestment of infrastructure projects	269	85
Other	-155	-249
Recognized tax expense	-1,366	-1,185

1 In a number of the markets where Skanska operates, the sale of real estate projects via the divestment of companies is tax-free.

2 In a number of the markets where Skanska operates, the sale of infrastructure projects via the divestment of companies is tax-free.

Income taxes paid in 2016 amounted to SEK -1,205 M (-804).

Income taxes paid can vary greatly from year to year for the countries where the Group operates.

Income taxes are often calculated based on different principles to those that apply to the preparation of the consolidated income statement. If the final income tax is less than the amount provisionally withdrawn in previous years, income taxes paid for the year may be substantially reduced.

Note 16. Continued

The table below shows a breakdown by country of income taxes paid:

Country	2016	Country	2015
Sweden	630	Sweden	480
USA	292	USA	161
Norway	79	Finland	102
Finland	59	Peru	48
Czech Republic	52	Norway	44
Other	93	Other	-31
	1,205		804

Tax assets och tax liabilities

	Dec 31, 2016	Dec 31, 2015
Tax assets	784	691
Tax liabilities	489	560
Net tax assets (+), tax liabilities (-)	295	131

Tax assets and tax liabilities refer to the difference between estimated income tax for the year and preliminary tax paid, as well as income taxes for prior years that have not yet been paid.

Deferred tax assets and deferred tax liabilities

	Dec 31, 2016	Dec 31, 2015
Deferred tax assets according to the statement of financial position	1,649	1,384
Deferred tax liabilities according to the statement of financial position	1,491	1,286
Net deferred tax assets (+), deferred tax liabilities (-)	158	98
	Dec 31, 2016	Dec 31, 2015
Deferred tax assets for loss carryforwards	167	101
Deferred tax assets for other assets	272	447
Deferred tax assets for provisions for pensions	1,140	910
Deferred tax assets for ongoing projects	647	361
Other deferred tax assets	1,633	1,352
Total before net accounting	3,859	3,171
Net accounting of offsettable deferred tax assets/liabilities	-2,210	-1,787
Deferred tax assets according to the statement of financial position	1,649	1,384
	Dec 31, 2016	Dec 31, 2015
Deferred tax liabilities for non-current assets	432	395
Deferred tax liabilities for ongoing projects	1,596	1,518
Deferred tax liabilities for other current assets	202	127
Other deferred tax liabilities	1,471	1,033
Total before net accounting	3,701	3,073
Net accounting of offsettable deferred tax assets/liabilities	-2,210	-1,787
Deferred tax liabilities according to the statement of financial position	1,491	1,286

Change in net deferred tax assets (+), liabilities (-)

	2016	2015
Net deferred tax assets, January 1	98	259
Divestments of companies	221	122
Recognized under other comprehensive income	185	-190
Deferred tax expenses	-303	-111
Reclassifications	-19	
Exchange-rate differences	-24	18
Net deferred tax assets, December 31	158	98

Deferred tax assets other than for loss carryforwards refer to temporary differences between carrying amounts for tax purposes and carrying amounts recognized in the statement of financial position. These differences arise, for example, when the Group's valuation principles deviate from those applied locally by a Group company. These deferred tax assets are mostly expected to be realized within five years.

Deferred tax assets arise, for example, when a recognized depreciation/amortization/impairment loss on assets becomes tax-deductible only in a later period, when eliminating intra-Group profits, when the provisions for defined-benefit pensions differ between local rules and IAS 19, when the required provisions become tax-deductible in a later period and when advance payments for ongoing projects are taxed on a cash basis.

Deferred tax liabilities for other assets and other deferred tax liabilities refer to temporary differences between carrying amounts for tax purposes and carrying amounts in the statement of financial position. These differences arise, for example, when the Group's valuation principles deviate from those applied locally by a Group company. These deferred tax liabilities are expected to be mostly realized within five years.

For example, deferred tax liabilities arise when depreciation/amortization for tax purposes in the current period is larger than the required economic depreciation/amortization and when accrued profits in ongoing projects are taxed only when the project is completed.

Temporary differences attributable to investments in Group companies, branches, associated companies and joint ventures for which deferred tax liabilities were not recognized amount to SEK 0 M (0). In Sweden and a number of other countries, divestments of holdings in limited companies are tax-exempt under certain circumstances. Temporary differences thus do not normally exist for the share holdings of the Group's companies in these countries.

Temporary differences and loss carryforwards that are not recognized as deferred tax assets

	Dec 31, 2016	Dec 31, 2015
Loss carryforwards that expire within one year		
Loss carryforwards that expire in more than one year but within three years	13	6
Loss carryforwards that expire in more than three years	1,799	1,633
Total	1,812	1,639

Skanska has loss carryforwards in a number of countries. In some of these countries the likelihood that a loss carryforward will be able to be used is difficult to assess and therefore no deferred tax asset is reported.

Note 17. Property, plant and equipment

Property, plant and equipment are reported in compliance with IAS 16 Property, Plant and Equipment. See Note 1 Accounting and valuation principles.

Office buildings and other buildings used in the Group's operations are recognized as property, plant and equipment. Machinery and equipment are recognized as a single item ("Plant and equipment").

Property, plant and equipment by asset class

	2016	2015
Property (buildings and land)	1,855	1,837
Plant and equipment	4,865	4,582
Property, plant and equipment under construction	117	85
Total	6,837	6,504

Depreciation of property, plant and equipment by asset class and function

Total	-1,131	-1,298	-175	-179	-1,306	-1,477

Impairment losses/reversals of impairment losses on property, plant and equipment

In 2016, gross reversals of impairment losses in the amount of SEK 8 (-11) were recognized. Reversals of impairment losses were applied in Poland and in the comparative year impairment losses were recognized in the U.S. All impairment losses/reversals of impairment losses were recognized under "Cost of production and management."

	Property (buildings and land)		Plant and equipment		Total

Carrying amount, January 1	1,837	1,990	4,582	5,038	85	94

Other items

Information about capitalized interest is presented in Note 15 Borrowing costs.

For information on finance leases, see Note 40 Leases.

Skanska has obligations to acquire property, plant and equipment in the amount of SEK 0 M (0).

Skanska did not receive any significant compensation from third parties for property, plant and equipment that was damaged or lost during the year or in the comparative year.

Not 18. Goodwill

Goodwill is recognized in compliance with IFRS 3 Business Combinations.

See Note 1 Accounting and valuation principles. For key judgments, see Note 2.

Goodwill amounted to SEK 5,270 M (5,256). In 2016 goodwill increased by SEK 14 M net due to exchange-rate differences and deductions for divested goodwill. During the comparative year, goodwill decreased by SEK 20 M.

Goodwill amounts by cash-generating units

	2016	2015	Change during the year	of which exchange-rate differences	Of which divestments
Construction					
Sweden	49	115	-66	1	-67
Norway	996	905	91	91	0
Finland	419	402	17	17	0
Poland	46	45	1	1	0
Czech Republic/Slovakia	535	513	22	22	0
UK	1,578	1,759	-181	-181	0
USA Building	368	341	27	27	0
USA Civil	850	787	63	63	0
Residential Development					
Norway	419	380	39	39	0
Finland	10	9	1	1	0
Total	5,270	5,256	14	81	-67

The goodwill recoverable amount is based exclusively on value in use. The amounts of goodwill together with other non-current assets, current-asset property and net working capital are tested annually.

Expected cash flows are based on forecasts for the development of the construction investments and residential development in each market and in the countries where the Group has operations. The forecasts are based on the units' two-year forecasts and the established five-year business plan. Future macroeconomic development and changes in interest rates are also important variables. The forecast period is 10 years, which is the period used in models for measurement of other types of assets, such as commercial projects. Using 10-year models it is easier to make assumptions concerning cycles, and there is less reliance on residual values.

The growth rate used to extrapolate cash flow forecasts beyond the period covered by the 10-year forecasts is the normal growth rate for the industry in each respective country.

Each Business Unit uses a unique discount factor based on weighted average cost of capital (WACC).

Parameters that affect the WACC are interest rates for borrowing, market risks and the ratio between borrowed funds and equity. The WACC interest rate is stated both before and after taxes.

The following table shows how the carrying amount relates to the recoverable amount for the respective Business Units for Skanska's largest goodwill items. The recoverable amount is expressed as 100. The tests are based on an assessment of anticipated development over the next ten-year period.

	Norway	Finland	Czech Republic	UK	USA Civil
Recoverable amount, 100	100	100	100	100	100
Carrying amount ¹	40	21	8	5	n.a
Carrying amount, previous year	22	28	n.a	0	n.a
Interest rate, percent (WACC), before taxes	12	8	9	10	10
Interest rate, percent (WACC), after taxes	8	7	8	9	7
Expected growth, %	2	2	3	3	2
Interest rate, percent (WACC), previous year (before taxes)	9	9	9	9	11
Interest rate, percent (WACC), previous year (after taxes)	7	7	7	7	7
Expected growth, %, previous year	0	0	2	2	2
Carrying amount in relation to recoverable amount, 100 in case of increase in interest rate by					
+ 1 percentage point	48	26	9	6	n.a
+ 5 percentage points	81	49	15	8	n.a
Carrying amount, previous year, in relation to recoverable amount 100 in case of increase in interest rate by					
+ 1 percentage point	28	32	n.a	0	n.a
+ 5 percentage points	48	55	n.a	1	n.a

¹ Value > 100 indicates that the recoverable amount is less than the carrying amount and an impairment loss needs to be recognized. For Skanska's operations in the U.S., the carrying amount was negative due to negative working capital exceeding the value of non-current assets.

Goodwill impairment losses

In both 2016 and the previous year no impairment losses were recognized within the Group.

Note 19. Intangible assets

Intangible assets are recognized in compliance with IAS 38 Intangible Assets, see Note 1 Accounting and valuation principles.

Intangible assets and useful life applied

	Dec 31, 2016	Dec 31, 2015	Useful life applied
Intangible assets, internally generated	467	349	3–7 years
Intangible assets, externally acquired	567	405	3–10 years
Total	1,034	754	

Internally generated intangible assets consist of business systems.

Externally acquired intangible assets include acquired software in the U.S. and Poland and licenses in Sweden.

Business systems are amortized over three to seven years. Service contracts are amortized over a period of three to six years, customer contracts are amortized at the pace of completion and patents are amortized over ten years.

Amortization of other intangible assets by function

All intangible assets are amortized as they have a limited useful life.

Amortization by function	2016	2015
Cost of sales	-53	-54
Selling and administration	-80	-48
Total	-133	-102

Impairment losses/reversals of impairment losses on other intangible assets

There were no impairment losses/reversals of impairment losses on other intangible assets in 2016 nor in the previous year.

Information about cost, accumulated depreciation and accumulated impairment losses

Carrying amount, January 1	405	411	349	53

¹ Internally generated intangible assets consist of business systems.

Other items

Information about capitalized interest is presented in Note 15 Borrowing costs.

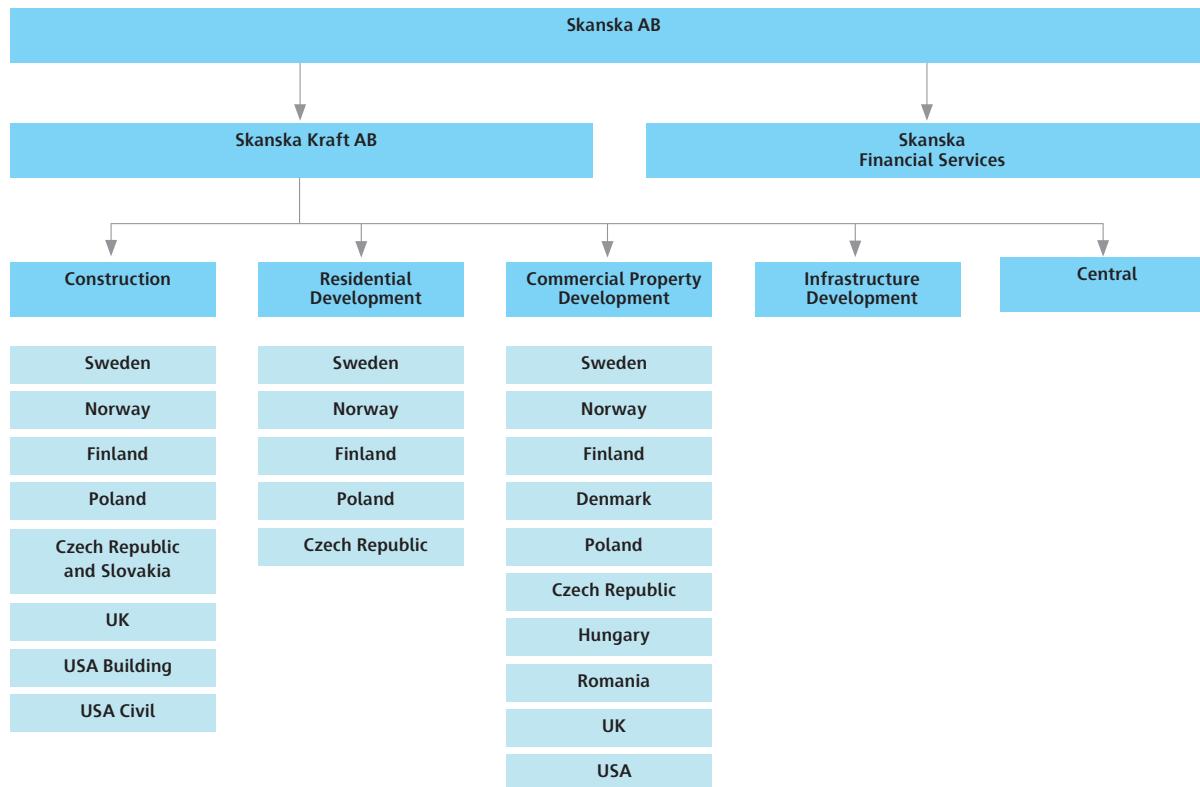

Direct research and development expenses amounted to SEK 231 M (210).

Note 20A. Subsidiaries

The Parent Company Skanska AB holds 100 percent of the shares in Skanska Financial Services AB and Skanska Kraft AB. Skanska Kraft AB in turn directly or indirectly owns the subsidiaries in the countries in which Skanska has operations.

All subsidiaries are independent limited companies, or the equivalent legal form in each country. Regarding the companies' domicile, see Parent Company notes, Note 52 Holdings in Group companies.

Skanska's Company Structure

According to Note 26, there are only minor interests in non-controlling interests.

Note 20B. Investments in joint ventures and associated companies

For all joint arrangements an assessment is made of their legal form, agreements between the owning parties and other circumstances. In compliance with IFRS 11, the joint arrangement is reported as a joint venture if the owning parties only have rights to the net assets. See also Note 1.

Investments in joint ventures and associated companies are reported according to the equity method of accounting. Income from joint ventures and associated companies is reported on a separate line in operating income. This income consists of the Group's share of the income in joint ventures and associated companies after financial items, adjusted for any impairment losses on consolidated goodwill and intra-Group profits.

Income from joint ventures and associated companies is presented in the following table:

	2016	2015
Share of income in joint ventures according to the equity method ¹	724	850
Share of income in associated companies according to the equity method ¹	4	2
Divestments of joint ventures	1,729	434
Impairment losses in joint ventures	-331	-16
Total	2,126	1,270

1 When calculating the income of joint ventures and associated companies according to the equity method, the Group's share of taxes is recognized on the "Taxes" line in the income statement. The Group's share of taxes in joint ventures amounts to SEK -94 M (-71) and its share of associated companies' taxes amounts to SEK 0 M (0). See also Note 16 Income taxes.

The carrying amount according to the statement of financial position and the change that occurred can be seen in the following table:

	2016			2015		
	Joint ventures	Associated-companies	Total	Joint ventures	Associated-companies	Total
January 1	2,833	19	2,852	2,599	19	2,618
New acquisitions	1,661		1,661	454		454

The year's provision/reversal for intra-Group profit on contracting work	-11		-11	-11		-11
Changes in fair value of derivatives	855		855	281		281
Impairment losses for the year	-331		-331	-16		-16
The year's change in share of income in joint ventures and associated companies after subtracting dividends received	272	3	275	232		232
Carrying amount, December 31	4,137	23	4,160	2,833	19	2,852

Joint ventures

Joint ventures are reported in compliance with IFRS 11 Interests in Joint Ventures. See Note 1 Accounting and valuation principles.

The Group has holdings in joint ventures with a carrying amount of SEK 4,137 M (2,833).

Infrastructure Development includes carrying amounts in joint ventures totaling SEK 2,701 M (1,916).

Income from joint ventures

Share of income in joint ventures is reported in operating income, because these holdings are an element of Skanska's business.

Share of income in joint ventures according to the equity method comes mainly from Infrastructure Development operations.

Note 20B. Continued

Infrastructure Development

Infrastructure Development specializes in identifying, developing and investing in privately financed infrastructure projects, such as roads, hospitals and airports. The business stream focuses on creating new potential projects, mainly in the markets where the Group has operations.

Specification of major holdings of shares and participations in joint ventures

Company	Type	Country	Percentage of share capital	Percentage of voting power	Consolidated carrying amount

1 Carrying amounts for joint ventures in Infrastructure Development are affected by cash flow hedges. The value of these cash flow hedges amounts to -640 (-1,606). When joint ventures where the carrying amount is affected by cash flow hedges are sold, the income from the sale will be affected as the effect of the cash flow hedges is rebooked against income.

2 For the companies Bristol LEP Ltd, Essex LEP Ltd and Sjisjka Vind AB shareholder agreements exist between the co-owners stating, among other things, that key issues such as budgets and investments must be determined jointly; Skanska has concluded that this means Skanska does not have a controlling interest, despite having a high percentage of the capital and voting rights.

3 Holding divested in 2016.

Note 20B. Continued

Assets pledged

Shares in joint ventures pledged as collateral for loans and other obligations amount to SEK 2,682 M (1,667).

Other items

Skanska's joint ventures are owned by Skanska and other investors. Each are capital-intensive projects and are financed in part by capital from the owning parties, but the majority are financed via banks or credit institutions. The assets of the respective joint ventures are used as collateral for the liabilities. According to agreements with the banks, the ability to access bank account funds from these joint ventures is restricted.

Skanska's portion of the total investment obligations of partly owned joint ventures amounts to SEK 3,849 M (3,553), of which Skanska has remaining obligations to invest SEK 1402 M (1,605) in Infrastructure Development in the form of equity holdings and loans. The remaining portion is expected to be financed mainly in the form of bank loans or bonds in the respective joint ventures and in the form of participations and loans from other co-owners.

Contingent liabilities for joint ventures amounted to SEK 1,379 M (1,890).

Associated companies

Associated companies are reported in compliance with IAS 28 Investments in Associates. See Note 1 Accounting and valuation principles.

The carrying amount of associated companies is SEK 23 M (19).

Information on the Group's share of revenue, income, assets, liabilities and equity in associated companies

	2016	2015
Revenue	30	24
Earnings	3	0
Assets	25	25
Equity ¹	23	19
Liabilities	2	6

1 Reconciliation between equity and carrying amount of holdings, in accordance with the equity method of accounting.

	2016	2015
Equity in associated companies	23	19
Adjustment for losses not recognized	0	0
Carrying amount	23	19

Other items

The associated companies have no liabilities or contingent liabilities which the Group may become responsible for paying. Nor are there any obligations for further investments.

Note 20c. Joint operations

Skanska executes certain projects with a joint party without a separate legal company being formed for the purpose. These projects are then classified as joint operations in compliance with IFRS 11. Joint operations without the formation of a separate company are found mainly in the USA.

Skanska also executes certain projects with a joint party where a separate company is formed for the purpose. These projects are classified as joint operations provided that the other criteria in IFRS 11 are fulfilled.

Specification of significant holdings in joint operations, according to sales in current year

Name of joint operation	Type	Country	Percentage of share capital
AMP6 Thames water	Water maintenance	UK	33
Skanska Morrison	Gas maintenance	UK	50
Skanska/Walsh	Airport	USA	70
Skanska-Shimmick-Herzog	Public transit	USA	45

Skanska Granite Skanska	Public transit	USA	50
Skanska Kiewit Ecco	Highway/bridge	USA	45
Skanska Burns & McDonnell ECCO III	Power plant	USA	55

There are around 150 other small joint operations in the above countries, as well as in Sweden, Norway, the Czech Republic and Slovakia.

Note 21. Financial assets

Financial investments, financial receivables and shareholdings where ownership is less than 20 percent and the Group has no significant influence are recognized as financial non-current assets.

Financial investments and financial receivables are recognized as financial current assets. See also Note 6 Financial instruments and financial risk management.

¹ Shares recognized at the lower of cost and fair value are included for an amount of SEK 44 M (61).

In 2016, shareholdings were affected by impairment losses of SEK 0 M (0).

Note 22. Current-asset properties/project development

Current-asset properties are recognized in compliance with IAS 2 Inventories. See Note 1 Accounting and valuation principles.

The allocation of items in the statement of financial position by business stream is presented below.

Business stream	Dec 31, 2016	Dec 31, 2015
Commercial Property Development	19,728	16,650
Residential Development	13,950	10,370
Total	33,678	27,020

For a further description of the respective business streams, see Note 4 Operating segments.

Completed properties, properties under construction and development properties are all reported as current-asset properties.

Impairment losses/reversals of impairment losses

Current-asset properties are valued in compliance with IAS 2 Inventories, and are thus carried at cost or net realizable value, whichever is lower. Adjustment to net realizable value via an impairment loss is recognized, as are reversals of previous impairment losses, in the income statement under "Cost of production and management."

Net realizable value is affected by the type and location of the property and by the yield requirement in the market.

The following table shows that impairment losses totaling SEK 0 M (0) were reversed during the year.

	Impairment losses		Reversals of impairment losses		Total	
	2016	2015	2016	2015	2016	2015

¹ Estimated market value. Internal appraisal, with valuation on respective completion dates.

Assets pledged

Shares in joint ventures pledged as collateral for loans and other obligations amount to SEK 445 M (422). See Note 33 Assets pledged, contingent liabilities and contingent assets.

Other items

Information about capitalized interest is presented in Note 15 Borrowing costs. Skanska has committed to investing SEK 1,173 M (1,053) in current-asset properties.

Note 23. Inventories etc.

Inventories are reported in compliance with IAS 2 Inventories.

See Note 1 Accounting and valuation principles.

	Dec 31, 2016	Dec 31, 2015
Raw materials and supplies	420	409
Products being manufactured	128	55
Finished products and merchandise	494	480
Total	1,042	944

There are no significant differences between the carrying amount for inventories and their fair value.

No portion of inventories was adjusted due to an increase in net realizable value.

No merchandise was used as collateral for loans and other obligations.

Note 24. Other operating receivables

Non-interest-bearing business receivables are reported as "Other operating receivables." Other operating receivables are part of the Group's operating cycle and are recognized as current assets.

	Dec 31, 2016	Dec 31, 2015
Trade accounts receivable, joint ventures	139	163
Trade accounts receivable, others	23,676	20,475
Other operating receivables	3,122	3,080
Prepaid costs and accrued income	2,822	2,159
Total	29,759	25,877
Of which financial instruments reported in Note 6 Financial instruments and financial risk management.		
Trade accounts receivable	23,815	20,638
Other operating receivables including accrued interest income	97	28
	23,912	20,666
Of which non-financial instruments	5,847	5,211

Note 25. Cash

"Cash" consists of cash and available funds at banks and equivalent credit institutions. Cash totaled SEK 5,430 M (11,840). The Group had no cash equivalents on the closing day, or on the previous year's closing day.

Note 26. Equity/earnings per share

In the consolidated financial statements, equity is allocated between equity attributable to equity holders (shareholders) and non-controlling interests (minority interests). Non-controlling interests account for about 1 percent of total equity.

Equity changed during the year as follows:

	2016	2015
January 1	24,206	21,405
of which non-controlling interests	127	154
Total comprehensive income for the year		
Profit for the year attributable to		
Equity holders	5,722	4,780
Non-controlling interests	13	11
Other comprehensive income		
Items that will not be reclassified to profit or loss for the period		
Remeasurement of defined benefit plans ¹	-1,127	785
Tax related to items that will not be reclassified to profit or loss for the period	189	-175
Total	-938	610
Items that have been or will be reclassified to profit or loss for the period		
Translation differences attributable to equity holders ²	1,165	71
Translation differences attributable to non-controlling interests	8	-3
Hedging of exchange rate risk in foreign operations ²	36	-21
Effect of cash flow hedges ³	886	335
Tax related to items that have been or will be reclassified to profit or loss	-4	-15
Total	2,091	367
Other comprehensive income for the year after tax	1,153	977
Comprehensive income for the year	6,888	5,768
of which attributable to equity holders	6,867	5,760
of which attributable to non-controlling interests	21	8
Other changes in equity not included in comprehensive income for the year		
Dividend to equity holders	-3,075	-2,775
Dividend to non-controlling interests	-6	-35
Change in Group structure	14	0
Effect of share-based remuneration	272	259
Shares repurchased	-793	-416
Total	-3,588	-2,967
Equity, December 31	27,506	24,206
of which non-controlling interests	156	127

¹ Remeasurement of defined benefit pension plans, SEK -1,127 M (785), together with tax, SEK 189 M (-175), totaling SEK -938 M (610), constitutes the Group's total effect on other comprehensive income of remeasurement of pensions recognized in compliance with IAS 19 and is recognized in retained earnings.

² Translation differences attributable to equity holders, SEK 1,165 M (71), plus hedging of exchange rate risk in foreign operations, SEK 36 M (-21), totaling SEK 1,201 M (50), constitute the change in the Group's in translation reserve.

³ Effect on cash flow hedges SEK 886 M (335), together with taxes -4 M (-15), totaling SEK 882 M (320) constitutes change in the Group's cash flow hedge reserve.

Equity attributable to equity holders is allocated as follows:

	Dec 31, 2016	Dec 31, 2015
Share capital	1,260	1,260

December 31	-811	-1,693
Total reserves	1,672	-411

Translation reserve

The translation reserve consists of accumulated translation differences from the translation of financial reports for foreign operations. The translation reserve also includes exchange rate differences that have arisen when hedging net investments in foreign operations. The translation reserve was reset at zero upon the transition to IFRS on January 1, 2004.

Translation differences for the year amount to SEK 1,165 M (71) and consist of positive translation differences in CZK, EUR, NOK and USD, and of negative translation differences in the other currencies in which the Group does business.

(For currency abbreviations, refer to Note 34 Foreign exchange rates and effect of changes in foreign exchange rates.)

In 2016 the translation reserve was affected by exchange rate differences of SEK 36 M (-21) due to currency hedging.

The Group has currency hedges against net investments mainly in EUR, GBP and USD.

The accumulated translation reserve totaled SEK 2,483 M (1,282).

Note 26. Continued

Cash flow hedge reserve

Hedge accounting is applied mainly to Infrastructure Development.

Recognized in the cash flow hedge reserve are unrealized gains and losses on hedging instruments.

The change in 2016 amounts to SEK 882 (320), which is mainly explained by interest rate swaps in Skanska's joint venture company for the M25 project no longer being included in the reserve following the sale of the motorway project. The reserve at year-end amounted to SEK -811 M (-1,693).

Retained earnings

Retained earnings include the profit for the year plus undistributed Group profits earned in prior years. The Parent Company's statutory reserve is part of retained earnings, along with remeasurements of pension liabilities, which in compliance with IAS 19 are recognized under "Other comprehensive income."

Remeasurement of defined benefit pension plans

In 2016 equity was affected by remeasurement of defined-benefit plans in the amount of SEK -938 M (610) after taking into account social insurance contributions and taxes. The change due to remeasurement of pension obligations in 2016 was SEK -2,325 M (741) and was attributable to the net result of changed assumptions and experience-based adjustments. Remeasurement of plan assets during the year amounted to SEK 1,303 M (-133) which is mainly due to return on interest-bearing securities in 2016 not reaching the expected level. See also Note 28 Pensions.

	2016	2015
Remeasurement of pension liabilities	-2,325	741
Difference between expected and actual return on plan assets	1,303	-133
Social insurance contributions including special payroll tax	-105	177
Taxes	189	-175
Total	-938	610

IFRS 2 Share-based Payment

The share incentive programs introduced in 2011 and 2014 respectively are recognized as share-based payment, which is settled with an equity instrument in compliance with IFRS 2. This means that fair value is calculated on the basis of estimated fulfillment of established financial targets during the measurement period. After the end of the measurement period the fair value is established. This value is allocated over the three-year vesting period. There is no reappraisal after fair value is established during the remainder of the vesting period, aside from changes in the number of shares because the condition of continued employment during the vesting period is no longer fulfilled.

Dividend

After the closing day, the Board of Directors proposed a regular dividend of SEK 8.25 (7.50) per share for the 2016 financial year.

The proposed dividend for 2016 amounts to SEK 3,377 M (3,075).

No dividend is paid for the Parent Company's holding of Series B shares. The total dividend amount may change by the record date, depending on repurchases of shares and transfers of Series B shares to participants in Skanska's long-term employee ownership programs. The dividend is subject to the approval of the Annual General Meeting on April 4, 2017.

Shares

Information on the number of shares as well as earnings and equity per share is presented in the table below.

	2016	2015
Number of shares at year-end	419,903,072	419,903,072
of which Series A shares	19,793,202	19,859,200
of which Series B shares	400,109,870	400,043,872
Average price, repurchased shares, SEK	132.18	121.02
of which repurchased during the year	4,345,000	2,340,000
Number of Series B treasury shares, December 31	10,594,644	8,866,223
Number of shares outstanding, December 31	409,308,428	411,036,849
Average number of shares outstanding	409,896,419	411,059,056
Average number of shares outstanding after dilution	412,174,095	414,445,854

Earnings per share after dilution, SEK	13.88	11.53
Equity per share, SEK	66.82	58.58
Change in number of shares	2016	2015
Number on January 1	411,036,849	410,789,258
Number of Series B shares repurchased	-4,345,000	-2,340,000
Number of shares transferred to employees	2,616,579	2,587,591
Number on December 31	409,308,428	411,036,849

Dilution effect

In the employee ownership programs introduced 2014 the number of potential ordinary shares is calculated during the measurement period based on the estimated number of shares that will be issued upon fulfillment of the established targets. After the end of the measurement period, Skanska establishes the number of shares that may be issued, provided that the requirement of continued employment is fulfilled. The number of potential ordinary shares thus calculated is then reduced by the difference between the payment Skanska is expected to receive and the average share price during the period.

Excluding social insurance contributions, the cost of both employee ownership programs is estimated at a total of around SEK 1,667 M, allocated over three years, corresponding to 12,290,787 shares. The maximum dilution at the end of the vesting period is estimated at 1.23 percent. In 2016 the cost of both programs amounted to SEK 272 M, excluding social insurance contributions. Share awards earned but not yet allocated by the end of 2016 totaled 2,567,457 shares. The dilution effect up to and including 2016 totaled 0.55 percent.

Capital management

Capital requirements vary between business streams. Skanska's construction projects are mainly based on customer funding. As a result, in its Construction business stream, the company can operate with negative working capital. However, the equity requirement for a construction company is substantial and is related to the large business volume and to the risks inherent in the various types of construction assignments carried out. Skanska must also take into account the financing of goodwill and the performance guarantees required in publicly procured projects in the U.S. market.

The Board has determined that the Group's equity is at a reasonable level based on what Skanska's financial position and market circumstances require.

Note 27. Financial liabilities

Financial liabilities are allocated between non-current and current liabilities. Normally, a maturity date within one year is required if a liability is to be treated as current. This does not apply to discounted operating liabilities, which are part of Skanska's operating cycle and are therefore recognized as current liabilities regardless of their maturity date.

For information on financial risks and financial policy, see Note 6 Financial instruments and financial risk management.

Financial non-current liabilities	Dec 31, 2016	Dec 31, 2015
Financial liabilities at fair value through profit or loss

of which non-interest-bearing financial current liabilities	49	72
Total carrying amount for financial liabilities	10,337	10,429

Note 28. Pensions

Pension provisions are recognized in compliance with IAS 19 Employee Benefits. See Note 1 Accounting and valuation principles.

Pension liability according to the statement of financial position

According to the statement of financial position, interest-bearing pension liabilities amounted to SEK 4,901 M (3,969) and interest-bearing pension receivables amounted to SEK 364 M (229). The net amount of interest-bearing pension liabilities and interest-bearing pension receivables was SEK 4,537 M (3,740).

Skanska has defined-benefit pension plans in Sweden, Norway and the UK. The pension in these plans is mainly based on final salary or average earnings during the term of employment. The plans include a large number of employees, but Skanska also has defined-contribution plans in these countries. Group companies in other countries have pension plans reported as defined-contribution plans.

Defined-benefit plans

The pension plans mainly consist of retirement pensions. Each respective employer usually has an obligation to pay a lifetime pension. Benefits are based on the number of years of employment. The employee must belong to the plan for a certain number of years to earn a full retirement pension entitlement. For each year, the employee earns increased pension entitlements, which are reported as pension earned during the period plus an increase in pension obligation. Pension plans are funded by securing pension obligations with assets in pension funds and provisions in the accounts.

The plan assets in Sweden and the UK are smaller than the pension obligations. The difference is therefore recognized as a liability in the statement of financial position. The plan assets in Norway exceed the pension obligations. The difference is therefore recognized as a receivable. The ceiling rule which, in some cases, limits the value of these assets in the accounts does not apply according to the existing pension foundation statutes, with the exception of one of the plans in Norway and one of the smaller plans in the UK. The carrying amount of the plan assets was reduced by SEK 48 (1) M due to the limit in the ceiling rule.

On the closing day, the pension obligation amounted to SEK 21,803 M (19,646). The obligation for pensions increased mainly due to remeasurements of pension obligations as a result of lower discount rates for the pension plans in Sweden and the UK. The remeasurements are included in other comprehensive income and for 2016 the net result was SEK 2,325 M (-741). Pension obligations have increased due to the costs for vested pensions and interest expense exceeding pensions paid, which was partially offset by lower exchange rates for GBP.

Plan assets amounted to SEK 17,266M (15,906). The plan assets increased in value due to paid-in funds and return on plan assets exceeding benefits paid, which was to some extent set off by lower exchange rates for GBP. The result of remeasurement of plan assets via other comprehensive income in 2016 was SEK 1,303 M (-133), which is mainly due to return on interest-bearing securities in 2016 not reaching the expected level of interest income.

The return on plan assets recognized in the income statement amounted to SEK 518 M (504), while the actual return amounted to SEK 1,821 M (371). The higher return was mainly attributable to pension plans in the UK. The plan assets mainly consist of equities, interest-bearing securities, mutual fund units and investments in properties and infrastructure projects. No assets were used in Skanska's operations. The number of directly owned shares in Skanska AB totaled 370,000 (370,000) Series B shares. There is also an insignificant percentage of indirectly owned shares in Skanska AB via investments in various mutual funds.

There are various types of risk inherent in the company's defined-benefit pension plans. Pension obligations are mainly affected by the relevant discount rate, wage increases, inflation and life expectancy. The risk inherent in the plan assets is mainly market risk. Overall, these risks may result in volatility in the company's equity and in increased future pension costs and higher than estimated pension disbursements. Skanska continually monitors changes in its pension commitments and updates assumptions at least once a year. Pension commitments are calculated by independent actuaries. The company has prepared policy documents for the management of plan assets in the form of investment guidelines regulating permitted investments and allocation frameworks for these. In addition, the company uses external investment advisors who continually monitor development of

Note 28. Continued

the plan assets. The long duration of the pension commitments is partly matched by long-term investments in infrastructure projects and property investments and investments in long-term interest-bearing securities.

The largest defined-benefit plan for Skanska in Sweden is the ITP 2 plan, in which pensions are based on final salary on retirement. ITP 2 covers salaried employees born in 1978 or earlier. The pension commitments are secured through assets in a pension foundation and through insurance with PRI Pensionsgaranti. The pension commitment is lifelong and sensitive to changes in the discount rate, pay increases, inflation and life span.

A small portion of the ITP 2 plan is secured by insurance from the retirement insurance company Alecta. This is a multi-employer insurance plan, and there is insufficient information to report these obligations as a defined-benefit plan. Pensions secured by insurance from Alecta are therefore reported as defined-contribution plans. Contributions paid in 2016 amounted to around SEK 3 M. At the end of 2016, the collective consolidated level of defined-benefit plans in Alecta totaled 149 percent (153). The collective consolidated level consists of assets as a percentage of actuarial obligations.

Within Skanska Norway, the largest defined-benefit pension plan is the Skanska Norge Pensionskassa pension fund. This plan covered almost all employees of Skanska in Norway and the pension is based on final salary and number of years of employment with Skanska. The pension commitments are secured through assets in the pension fund. The pension commitment is lifelong and sensitive to changes in the discount rate, pay increases, inflation and life span.

The largest of Skanska's defined-benefit pension plans in the UK is the Skanska Pension Fund. The plan covers salaried employees and is based on average earnings over the period of employment. The pension is remeasured following changes in inflation (index-linked). The pension commitments are secured through assets in the pension fund. The pension commitment is sensitive to changes in the discount rate, inflation and life span.

Life expectancy after age 65, men	23 years	21 years	24 years
Life expectancy after age 65, women	25 years	24 years	25 years
Life expectancy table	PRI	K2013	S1

All three countries where Skanska has defined-benefit plans have an extensive market for high-grade long-term corporate bonds, including mortgage bonds. The discount rate is established on the basis of the market yield for these bonds on the closing day.

Sensitivity of pension obligations to changes in assumptions

	Sweden	Norway	UK	Total ¹
Pension obligations, December 31, 2016	8,086	3,984	9,733	21,803
Discount rate increase of 0.25%	-375	-200	-500	-1,075
Discount rate decrease of 0.25%	375	200	500	1,075
Increase of 0.25% in expected pay increase	125	75	0	200
Reduction of 0.25% in expected pay increase	-125	-75	0	-200
Increase of 0.25% in expected inflation	275	150	350	775
Decrease of 0.25% in expected inflation	-275	-150	-350	-775
Life expectancy increase of 1 year	300	175	300	775

¹ Estimated change in pension obligation/pension liability in the event of a change in the assumption for all three countries. If pension liability increases, the Group's equity is reduced by about 90 percent of the increase in pension liability, after taking into account deferred tax and social insurance contributions.

Note 28. Continued

Sensitivity of plan assets to changes in estimated return

	Sweden	Norway	UK	Total ¹
Plan assets, December 31, 2016	4,290	4,348	8,628	17,266
Return increase of 5%	210	220	430	860
Return decrease of 5%	-210	-220	-430	-860

1 If actual return exceeds the estimated interest income by 5 percent, the gain upon remeasurement is expected to amount to around SEK 860 M (860). If actual return falls below the estimated interest income by 5 percent, the loss upon remeasurement is expected to amount to around SEK 860 M (860).

The sensitivity analyses are based on existing circumstances, assumptions and populations. Application at other levels may produce different effects of changes.

Defined-contribution plans

These plans mainly cover retirement pension, disability pension and family pension. The premiums are paid regularly during the year by the respective Group company to separate legal entities, for example insurance companies. The size of the premium is based on salary. The pension expense for the period is included in the income statement.

Total pension expenses in the income statement for defined-benefit plans and defined-contribution plans

	2016	2015
Defined-benefit pensions vested during the year	-671	-716
Less: Funds contributed by employees	9	10

Provision for social insurance contributions on pensions	752	617
Contingent considerations ¹	533	175
Provisions for commitments in joint ventures	139	110
Other provisions	970	897
Total	3,340	2,669

1 Of which SEK 0 M (16) is from acquisitions of operations and SEK 533 M (159) from acquisitions of current-asset properties. These are reported as financial instruments. See Note 6.

The normal cycle time for "Other provisions" is about one to three years.

Provisions for warranty obligations are for expenses that may arise during the warranty period. Such provisions in Construction are based on individual assessments of each project or average experience-based cost, expressed as a percentage of sales during a five-year period. The expenses are charged to each project on a continuous basis. Provisions for warranty obligations in other business streams are based on individual assessments of each projects. The change in 2016 was mainly related to Construction.

Provisions for legal disputes refer to provisions in the Construction business stream for projects that have been completed.

Provisions for restructuring measures mainly include items related to Poland and the discontinuation of operations in Latin America.

Employee-related provisions included such items as the cost of profit-sharing, certain bonus programs and other obligations to employees.

Provisions for environmental obligations include the costs of restoring gravel pits to their natural state in Swedish operations.

Note 30. Other operating liabilities

Non-interest-bearing liabilities in business operations are recognized as "Other operating liabilities." Such liabilities are part of the Group's operating cycle and are recognized as current liabilities.

	Dec 31, 2016	Dec 31, 2015
Trade accounts payable	15,520	15,053
Other operating liabilities to joint ventures	0	0
Other operating liabilities ¹	6,439	6,101
Accrued expenses and prepaid income	14,121	13,810
Total	36,080	34,964
Of which financial instruments reported in Note 6 Financial instruments and financial risk management		
Trade accounts payable	15,520	15,053
Other operating liabilities including accrued interest expenses	694	727
	16,214	15,780
Of which non-financial instruments	19,866	19,184

1 "Other operating liabilities" includes SEK 538 M (532) for checks issued but not yet cashed in the U.S. See Note 1 Accounting and valuation principles.

Note 31. Specification of interest-bearing net receivables/liabilities per asset and liability

The following table shows the breakdown of financial current and non-current assets as well as liabilities between interest-bearing and non-interest-bearing items..

	Dec 31, 2016			Dec 31, 2015		
	Interest-bearing	Non interest-bearing	Total	Interest-bearing	Non interest-bearing	Total

EQUITY AND LIABILITIES				106,505		97,667

1 In case of amounts expected to be recovered within twelve months, the expected annual depreciation/amortization has been recognized.

2 The breakdown cannot be estimated.

3 Deferred tax assets are expected to be recovered in their entirety after 12 months.

4 Recovery of current-asset properties within one year is based on a historical assessment from the past three years.

5 Current receivables that fall due in more than twelve 12 months' time are part of the operating cycle and are thus recognized as current.

6 "Within 12 months" refers to expected benefit payments (payments from funded plans are not included).

Note 33. Assets pledged, contingent liabilities and contingent assets

Assets pledged

	2016	2015
Mortgages, current-asset properties	445	422
Shares and participations	2,682	1,667
Receivables	1,021	1,328
Total	4,148	3,417

Joint ventures within the Infrastructure Development business stream are reported as pledged assets when the holdings in the project company, which may be owned directly by Skanska or owned through intermediary holding companies, are provided as security for loans from banks or lenders other than the co-owners. The comparative year has been restated according to this principle.

Assets pledged for liabilities

	Property mortgage		Shares and receivables		Total	
	2016	2015	2016	2015	2016	2015
Own obligations						
Liabilities to credit institutions	445	418	44	35	489	453
Other liabilities		4	977	1,293	977	1,297
Total own obligations	445	422	1,021	1,328	1,466	1,750
Other obligations			2,682	1,667	2,682	1,667
Total	445	422	3,703	2,995	4,148	3,417

Assets pledged for other liabilities, SEK 1.0 billion (1.3), relate predominantly to financial instruments pledged as collateral to clients in conjunction with contracting work in the U.S.

Contingent liabilities

Contingent liabilities are reported in compliance with IAS 37 Provisions, Contingent Liabilities and Contingent Assets. See Note 1 Accounting and valuation principles.

	2016	2015
Contingent liabilities related to joint construction operations	59,857	43,073
Contingent liabilities related to other joint operations	28	24
Contingent liabilities related to joint ventures	1,379	1,890
Other contingent liabilities	631	1,239
Total	61,895	46,226

The Group's contingent liabilities related to contracting work executed jointly with other contractors totaled SEK 59.9 billion (43.1). This amount refers to the portion of the joint and several liability relating to the obligations of the joint operation in question that affect other participants in the joint operation. Such liability is often required by the customer. To the extent it is deemed likely that Skanska will be subject to liability claims, the obligation is reported as a liability.

Contingent liabilities related to joint ventures refer mainly to guarantees issued for joint ventures belonging to the Residential Development, Commercial Property Development and Infrastructure Development business streams.

In the Group's other contingent liabilities, just over SEK 0.6 billion (1.2) related mainly to obligations for residential projects.

In December 2016 Skanska received a claim from the Maltese government regarding defective concrete in the Mater Dei hospital, a hospital in Malta that Skanska International was involved in starting in 1995. Skanska is opposing this claim in its entirety.

In October 2016, the Helsinki Court of Appeal in Finland ruled on the damages claim relating to the asphalt cartel. The Court of Appeal denied parts of the municipalities' claim against Skanska, but at the same time upheld certain parts of the Finnish government's claim which had been denied in its entirety by the district court based on the fact that the Finish government was found to have been part of the cartel. Under the Court of Appeal's ruling, the total damages for Skanska Asfaltti Oy converted at an exchange rate on December 31, 2016 may be just over SEK 26 M. Skanska Asfaltti Oy has filed an appeal with the Supreme Court regarding the order to pay damages to the Finnish government.

As Skanska announced in March 2015, the Administrative Council of Economic Defence (CADE) and the Comptroller General (CGU) in Brazil included Skanska Brazil in their investigation into corruption and cartels linked to specific Petrobras projects. At the end of 2015 two administrative legal proceedings were initiated aimed at Skanska Brazil and twenty other companies. In June 2016 the CGU (now the Ministry of Transparency, Inspection and Control) excluded Skanska from participating in public procurement negotiations in Brazil for a period of no less than two years. CADE's legal proceedings are still in their early stages and are expected to last for several years.

Other authorities in Brazil have initiated legal proceedings based on the same investigations. As Skanska announced in April 2016 the Brazilian government (AGU) has filed a lawsuit against seven companies, one of which is Skanska Brazil, and seven individuals connected to Skanska. The lawsuit focuses on alleged payments made by a joint venture partner of Skanska Brazil. The judge dismissed the case against Skanska. The decision was appealed by the AGU. There is great uncertainty about how these proceedings will develop and when they will be concluded.

Skanska has been informed by the Swedish Prosecution Authority in Stockholm that it has initiated a preliminary investigation into the case relating to operations in Brazil och Czech Republic.

From time to time, disputes arise with customers about contractual terms related to both ongoing and completed projects. Their outcomes are often difficult to predict. To the extent it is probable that a dispute will lead to an expense for the Group, this is taken into account in the financial statements.

Contingent assets

The Group has no contingent assets of significant importance in assessing the position of the Group.

See Note 1 Accounting and valuation principles.

Note 34. Foreign-exchange rates and effect of changes in foreign exchange rates

Exchange rates are dealt with in compliance with IAS 21 The Effect of Changes in Foreign Exchange Rates. See Note 1 Accounting and valuation principles.

Exchange rates

In 2016 the Swedish krona fluctuated against currencies in countries in which the Group does business.

Currency	Country	Average exchange rate			Change, percent	
		2016	2015	2014	2015–2016	2014–2015
CZK	Czech Republic	0.350	0.343	0.331	2	4

USD	USA	9.064	8.395	7.794	8	8

Income statement

In 2016 the average exchange rate of the SEK against the Group's other currencies strengthened against GBP, NOK and PLN, and weakened against the currencies CZK, DKK, EUR, USD.

The stronger SEK against GBP has had a negative effect on revenue in the amount of SEK -2.2 billion.

The total exchange rate effect on the Group's revenue was SEK -1,728 M (13,628), equivalent to -1.1 (8.9) percent. Total total exchange rate effect on the Group's operating income was SEK 6 M (344), equivalent to 0.1 (5.5) percent. See the table below.

Exchange-rate effect by currency

2016	USD	EUR	GBP	NOK	CZK	PLN	Other	Total
Revenue	846	111	-2,183	-353	115	-258	-6	-1,728

1 Including elimination of intra-Group receivables and liabilities.

2 Amount refers to hedges before tax deduction. Net investments abroad are currency-hedged to a certain extent through foreign currency loans and forward currency contract, see also Note 6. Hedging of net investments through foreign currency loans in EUR and GBP amounts to USD 2.8 billion (0.2). Hedging of net investments through foreign currency contracts amounts to USD 2.6 billion (1.0), which breaks down as USD 0.1 (0.7), EUR 0.3 (0.3) och GBP 2.2 (0.0).

3 The respective currencies are calculated including goodwill on consolidation and the net amount of Group surpluses after subtracting deferred taxes.

Effect on the Group of change in SEK against other currencies and change in USD against SEK

The following sensitivity analysis, based on the 2016 income statement and statement of financial position, shows the sensitivity of the Group to a unilateral 10-percent change in the SEK against all currencies, as well as a unilateral 10-percent change in the USD against the SEK (+ indicates a weakening of the Swedish krona, - indicates a strengthening of the Swedish krona).

SEK bn	+/- 10%	Of which USD +/- 10%
Revenue	+/- 11.4	+/- 5.8
Operating income	+/- 0.3	+/- 0.2
Equity	+/- 2.5	+/- 1.1
Net receivables/net liabilities	+/- 0.9	+/- 0.6

Other items

For information on the change in the translation reserve in equity, see Note 26 Equity/earnings per share.

Note 35. Cash flow statement

Aside from the cash flow statement prepared in compliance with IAS 7 Cash flow Statements, Skanska prepares a cash flow statement based on the operations carried out by the respective business streams. This cash flow analysis is called the "Consolidated operating cash flow statement." The connection between the respective cash-flow statements is explained below.

Adjustments for items not included in cash flow

	2016	2015
Depreciation/amortization and impairment losses/reversals of impairment losses	1,973	1,681
Income from divestments of non-current assets and current-asset properties	-4,936	-4,748
Income after financial items from joint ventures and associated companies	-728	-851
Dividends from joint ventures and associated companies	358	548
Provision for the year, intra-Group profits on contracting work	207	294
Pensions recognized as expenses but not related to payments	600	693
Pensions paid	-566	-559
Cost of Seop	272	259
Gain on joint ventures divested	-1,774	-437
Other items that have not affected cash flow from operating activities	-324	-93
Total	-4,918	-3,213

Taxes paid

Taxes paid are divided into operating activities, investing activities and financing activities.

Total taxes paid for the Group during the year amounted to SEK -1,205 M (-804).

Information about interest and dividends

	2016	2015
Interest income received during the year	69	88
Interest payments made during the year	-243	-438
Dividend received during the year	389	580

Cash and cash equivalents

Cash and cash equivalents in the cash-flow statement consist of cash and short-term investments. The definition of cash in the statement of financial position can be found in Note 1 Accounting and valuation principles.

The same rule that has been used in determining cash and cash equivalents in the statement of financial position has been used in determining cash and cash equivalents according to the cash flow statement. Only amounts that can be used without restrictions are recognized as cash.

	2016	2015
Cash	5,430	11,840
Total	5,430	11,840

Other items

At year-end, the Group's unutilized credit facilities amounted to SEK 5,713 M (5,497).

Non-controlling interests		
Interest-bearing liabilities	-26	-73
Non-interest-bearing liabilities	-905	-974
Total	-931	-1 047
Consideration	961	479
Cash and cash equivalents in divested companies	-99	-23
Effect on cash and cash equivalents, divestment	862	456

Divested Group companies provided a profit of SEK 268 M (59). This reduced, among other things, the cost of production and management.

For both 2016 and 2015, divestments constituted 100 percent of the holdings in the respective Group companies.

Relation between consolidated operating cash flow statement and consolidated cash flow statement

The difference between the consolidated operating cash flow statement and the consolidated cash flow statement in compliance with IAS 7 Cash flow Statements, is presented below.

The consolidated cash flow statement prepared in compliance with IAS 7 recognizes cash flow divided into:

Cash flow from operating activities
Cash flow from investing activities
Cash flow from financing activities

The consolidated operating cash flow statement recognizes cash flow divided into:

Cash flow from business operations
Cash flow from financing activities
Cash flow from strategic investments
Dividend etc.
Change in interest-bearing receivables and liabilities

The consolidated operating cash flow statement refers to operating activities as "business operations." Unlike the cash flow statement in compliance with IAS 7, "business operations" also includes net investments, which are regarded as an element of business operations together with tax payments on these. Such net investments are net investments in property, plant and equipment and intangible non-current assets as well as net investments in Infrastructure Development.

Investments of a strategic nature are recognized under cash flow from strategic investments.

Under cash flow from financing activities, the operating cash flow statement recognizes only interest and other financial items as well as taxes paid on these. Dividends are recognized separately. Loans provided and repayment of loans are also recognized separately along with changes in interest-bearing receivables at the bottom of the operating cash flow statement, resulting in a subtotal in that statement that shows cash flow before changes in interest-bearing receivables and liabilities.

Note 35. Continued

Cash flow for the year

	2016	2015
Cash flow from business operations including taxes paid according to operating cash flow	-1,078	8,040
Less net investments in property, plant and equipment and intangible assets	160	475
Less tax payments on property, plant and equipment and intangible assets divested and divestment of assets in Infrastructure Development	35	69
Cash flow from operating activities	-883	8,584
Cash flow from strategic investments according to operating cash flow	862	456
Net investments in property, plant and equipment and intangible assets	-160	-475
Increase and decrease in interest-bearing receivables	-2,260	-1,297
Taxes paid on property, plant and equipment and intangible assets divested and assets in Infrastructure Development	-35	-69
Cash flow from investing activities	-1,593	-1,385
Cash flow from financing activities according to operating cash flow statement, including changes in interest-bearing receivables and liabilities	-2,476	-2,615
Increase and decrease in interest-bearing liabilities	2,260	1,297
Dividend etc. ¹	-3,874	-3,226
Cash flow from financing activities	-4,090	-4,544
Cash flow for the year	-6,566	2,655
1 Of which repurchases of shares	-793	-416

Relation between the Group's investments in the cash flow statement and investments in the operating cash flow statement

Total net investments are recognized in the cash flow statement divided into operating activities and investing activities, taking into account the settlement of payments for investments and divestments.

Purchases and divestments of current-asset properties are recognized under operating activities, while other net investments are recognized under investing activities.

	2016	2015
Net investments in operating activities	-655	3 092
Net investments in investing activities	702	-19
	47	3 073
Less accrual adjustments, cash flow effect of investments	96	68
Total net investments	143	3 141

The consolidated operating cash flow statement recognizes net investments divided into net investments in operations and strategic net investments as follows.

Investments/divestments

	2016	2015
Operations – investments		
Intangible assets	-394	-392

Other items

No loans, assets pledged or contingent liabilities have been provided for the benefit of any Board member or President within the Group.

Note 37. Remuneration to senior executives and Board members

The Senior Executive Team (SET) consists of the President and CEO and the eight Executive Vice Presidents. The SET consisted of a total of nine individuals at the end of 2016.

Senior executives are defined as the members of the Senior Executive Team.

Preparation and decision-making processes

Principles for remuneration to senior executives are established annually by the Annual General Meeting. The salary and other benefits for the President and CEO are established by the Board of Directors of Skanska AB following recommendations from the Board's Compensation Committee. The Committee sets salaries, variable remuneration and other benefits for the other members of the Senior Executive Team. The President and CEO regularly informs the Compensation Committee about the salaries, variable remuneration and other benefits of the heads of Group staff units and Business Units. In 2016 the Compensation Committee consisted of Hans Björck, Chairman of the Board, who took over from Stuart Graham at the 2016 Annual General Meeting, Charlotte Strömberg, Board member, and John Carrig, Board member. The Compensation Committee met seven times during the year. The Annual General Meeting approves the directors' fees and remuneration for committee work for members of the Board, following recommendations from the Nomination Committee.

Remuneration to senior executives

Principles for remuneration

The 2016 Annual General Meeting approved the following principles for salaries and other remuneration to senior executives:

Remuneration to senior executives of Skanska AB is to consist of a fixed salary, possible variable remuneration, other customary benefits and pension. The senior executives include the President and CEO, and the other members of the Senior Executive Team.

The combined remuneration for each executive must be market-based and competitive in the job market in which the executive works, and outstanding performance should be reflected in the total remuneration package.

Fixed salary and variable remuneration are to be linked to the responsibility and authority of the executive. The variable remuneration is to be payable in cash and/or shares and it is to have a ceiling and be related to fixed salary. To receive shares a three-year vesting period is required and the shares are to be part of a long-term incentive program. Variable remuneration is to be based on outcomes in relation to established targets and be designed to achieve better alignment between the

interests of the executive and the company's shareholders. The terms of variable remuneration should be designed in such a way that if exceptional economic conditions exist, the Board has the possibility of limiting or refraining from paying variable remuneration if it is deemed unreasonable and incompatible with the company's other responsibilities to shareholders, employees and other stakeholders. With respect to the annual bonus, the Board has the possibility of limiting or refraining from paying this variable remuneration if it deems such action reasonable for other reasons.

If a Board member performs work on behalf of the company in addition to his or her Board duties, a consultant fee and other compensation for such work may be payable.

In case of termination or resignation, the normal notice period is six months combined with severance pay equivalent to a maximum of 18 months of fixed salary or, alternatively, a notice period of a maximum of 24 months.

Pension benefits are to be either defined-benefit or defined-contribution plans, or a combination of both, and will entitle the executive to receive an occupational pension from the age of 65. In individual cases, however, the pension age may be as early as 60. To earn full defined-benefit pension, the individual is required to have been employed for as long a period as is required under the company's general pension plans in each respective country. Variable remuneration is not pensionable except in cases where it follows from the rules in a general pension plan, e.g. Sweden's ITP occupational pension plan.

The Board of Directors may deviate from these guidelines if there are special reasons to do so in an individual case.

The President and CEO's salary and other remuneration are addressed by the Compensation Committee in preparation for decisions by the Board. The salary and other remuneration of other senior executives are determined by the Compensation Committee.

Targets and performance relating to variable remuneration

Variable remuneration may consist of two parts: annual variable salary, which is cash-based, and the share incentive program, which provides compensation in the form of shares.

The long-term share programs are described in the sections entitled "Long-term share programs" and "Previous long-term share programs" in this note. The table below specifies, by business stream, the starting point and "outperform" targets that were set by the Board for the 2016 cash-based variable remuneration.

Financial targets for variable salary elements 2016

	Measure of earnings	Starting Point	Outperform	Outcome	Percentage fulfilled ²
Group	Income after financial items, SEK bn ¹	4.8	6.7	8.0	100%
Construction³	Operating income, SEK bn	3.4	4.6	3.5	64%
	Skanska Value Added, SEK bn	3.7	4.9	4.4	89%
Residential Development⁴	Operating income, SEK bn	0.7	1.0	1.6	100%
	Return on capital employed, %	7	11	19	100%
Commercial Property Development	Operating income, SEK bn	1.0	1.5	2.3	94%
	Return on capital employed, % ⁵	8	11	16	100%
	Leasing, thousands of sq m	181	333	317	69%
Infrastructure Development	Operating income, SEK bn	0.5	0.7	1.8	100%
	Project development, % ⁶	0	100	72	72%

1 The income excludes eliminations at the Group level. The "Outperform" target at the Group level constitutes 95 percent of the business stream's total "Outperform" target and the "Starting point" target constitutes 105 percent of the business stream's total starting point target.

2 Percentage fulfilled is based on the outcomes in the respective Business Unit, which are weighed together.

3 The Skanska Value Added (SVA) target corresponds to operating profit less cost of capital employed. Cost of capital refers to the estimated cost of borrowed capital and equity before tax.

4 Residential Development in Central Europe as well as BoKlok are also measured according to number of sold units. Rental properties are also measured according to the number of units started.

5 Including unrealized development gains and changes in market value. Covers the Business Units for Commercial Property Development in the Nordic region, Europe and the U.S.

6 Includes targets for project development in Europe and the U.S. as well as asset management and divestments.

Note 37. Continued

In addition to the above-mentioned financial-performance targets, each person in the Senior Executive Team has non-financial targets that may reduce the outcome measured only according to the financial targets. These non-financial targets mainly relate to strategic initiatives linked to the business plan. The outcome is reduced in cases where the operations for which the person is responsible have not achieved the non-financial targets.

For the Senior Executive Team, excluding the President and CEO, annual variable remuneration is mainly tied to the Group targets and/or to the Business Units they are directly responsible for. The non-financial targets are connected to the Business Units and/or operations that individuals in the SET are responsible for. The preliminary outcome for the other SET members averaged 83 (80) percent of fixed annual salary. This calculation is preliminary, insofar as any deductions as a consequence of non-financial targets have not yet been taken into account. The Board will determine the final outcome of variable remuneration after reviewing operational performance in the first quarter of 2017.

Targets and performance related to variable remuneration for the President and CEO

For the President and CEO, the financial targets have been the same as the Group targets according to the table on the previous page. The Board of Directors has the option of reducing the final outcome of variable remuneration that is measured solely on the financial targets by a maximum of 50 percent, based on the outcome of the Group's non-financial targets. The preliminary outcome for the variable remuneration of the President and CEO (i.e. excluding the employee ownership program) shows an outcome of 100 percent (100) of fixed salary, based on financial targets with a target fulfillment of 100 percent (100). This calculation is preliminary, insofar as any deductions as a consequence of non-financial targets have not yet been taken into account. The Board will determine the final outcome in 2017 after reviewing operational performance.

Pension benefits

The retirement age for members of the Senior Executive Team is 62 to 65 years, and employees in Sweden are entitled to pension benefits according to the ITP occupational pension plan. The ITP plan encompasses the premium-based ITP 1 pension system and the defined-benefit ITP 2 pension system. Employees outside Sweden are covered by local pension plans. The ITP 1 premium is 4.5 percent of gross cash salary up to 7.5 base amounts of income per year and 30 percent of gross cash salary above that. The defined-benefit ITP 2 plan guarantees a lifetime pension from age 55. The pension amount is a certain percentage of final salary, and the service period to qualify for a full pension is 30 years. The pension entitlement is 10 percent for portions of salary up to 7.5 base amounts, 65 percent for portions between 7.5 and 20 base amounts and 32.5 percent for portions of salary between 20 and 30 base amounts. For portions of salary exceeding 30 base amounts, this ITP 2 group is covered by a supplementary pension entitlement, with a premium of 20 percent.

Severance pay

For members of the Senior Executive Team, in the case of termination by the company, the notice period is six months with retention of fixed salary and benefits, excluding variable remuneration. After the notice period, severance pay is disbursed for 12 to 18 months. When payments are disbursed after the notice period, other income must normally be subtracted from the amount payable.

A mutual notice period of 24 months applies between Skanska and the President and CEO, with retention of fixed salary and benefits, excluding variable remuneration. No severance pay will be disbursed in the case of termination.

Remuneration and benefits recognized as expenses in 2016

Directors' fees

The 2016 Annual General Meeting resolved that fees would be paid to the Board members elected by the Meeting, with the exception of the President and CEO, totaling SEK 8,485,000 (8,200,000), including a special allowance for committee work. See the table below.

Board of Directors

SEK thousand	Director's fee		Audit Committee		Compensation Committee		Project Review Committee		Total

Board of Directors	5,985	5,850	800	650	300	300	1,400	1,400	8,485	8,200

Chairman of the Board

During the 2016 financial year the Chairman of the Board, Hans Biörck, received a director's fee totaling SEK 2,445,000, of which SEK 450,000 was for committee work. The Chairman was also awarded a benefit value of around SEK 641,000 relating to participation in the long-term employee ownership program (Seop) during his time as an employee of Skanska AB.

Board members

Other members of the Board did not receive any remuneration for their role as Board members beyond their regular directors' fees and remuneration for committee work. John Carrig received SEK 770,000 (759,000) (corresponding to USD 90,000 (90,000)) for his work as an advisor to Skanska's U.S. operations.

For Board members appointed by the employees, no disclosures are made concerning salaries and remuneration or pensions, since they do not receive these in their capacity as Board members. For Board members who were employees of the company before the beginning of the financial year, disclosures are made concerning pension obligations in their former role as employees.

¹ Variable remuneration relating to the 2016 financial year is preliminary and will be finally determined and disbursed after the outcome is established in the first quarter of 2017. The amounts included under the heading "Variable remuneration" in the table above refer to the 2016 financial year. The variable remuneration agreements include a general clause stipulating that the Board of Directors and the Compensation Committee are entitled to wholly or partly reduce variable remuneration.

² The value stated refers to a preliminary allotment of matching shares and performance shares for 2016, at the share price on December 30, 2016 (SEK 215.1). The Senior Executive Team will receive an estimated 6,990 (6,055) matching shares and 160,768 (139,264) performance shares. The Board will determine the final outcome in 2017 after reviewing operational performance. In order to receive matching shares and performance shares, an additional three years of service are required. The cost is allocated over three years in compliance with IFRS 2. See the section entitled "Long-term share programs." The President and CEO as well as some other members of the Senior Executive Team received remuneration related to the 2013 financial year. After a three-year lock-up period as part of the previous employee ownership program, Seop 2, the President and CEO received 35,302 (27,638) shares equivalent to SEK 7,594,000 (4,555,000) in 2016, related to shares acquired for the financial year 2013. In 2016, as part of Seop 2, the other members of the Senior Executive Team, after a three-year lock-up period, received 86,998 (70,627) Series B Skanska shares, equivalent to SEK 18,713,000 (11,629,000), related to shares acquired for the financial year 2013.

President and CEO

In 2016 the President and CEO, Johan Karlström, received a fixed salary of SEK 12,360,000 (12,000,000) plus an estimated variable salary component of SEK 12,360,000 (12,000,000) based on financial targets being 100 percent fulfilled. Variable remuneration may total a maximum of 100 percent of fixed annual salary. The final outcome of variable remuneration for the President and CEO will be established by the Board in 2017 following a review of operational performance. The preliminary outcome was equivalent to 100 (100) percent of fixed annual salary. Disbursement normally occurs in May of the year following the performance year.

The President and CEO is also participating in the Group's ongoing employee ownership program, Seop 3, involving an allocation of matching shares and performance shares. See the section entitled "Long-term share programs" in this note. Within the framework of Seop 3, Johan Karlström acquired 6,698 (6,631) Series B Skanska shares in 2016, which resulted in an allocation of 1,675 (1,658) matching shares equivalent to SEK 360,000 (273,000). An estimated 38,515 (38,130) performance shares may be allocated, at a value of SEK 8,285,000 (6,284,000), since the Outperform targets were preliminarily 100 (100) percent fulfilled. The stated value refers to the share price on December 30, 2016 (SEK 215.1). The allocation of performance shares will be finally determined in the first quarter of 2017 after a review of operational performance.

The President and CEO is eligible for a pension from age 62 at the earliest. Annual pension provisions will total 50 percent of fixed annual salary. The cost in 2016 amounted to SEK 6,180,000 (6,000,000).

Other members of the Senior Executive Team

In 2016 one new individual joined the Senior Executive Team (SET) and one individual left the SET. At the end of 2016 the rest of the SET consisted of a total of eight individuals.

SET members received a fixed salary and variable remuneration based on the Group's earnings and/or the earnings of the Business Units for which they are directly responsible. In addition, senior executives were covered by the Group's ongoing employee ownership program, Seop 3, with an allocation of matching shares and performance shares. See the section entitled "Long-term share programs" in this note. A total of 21,261 (17,588) Series B Skanska shares were purchased by the other SET members in 2016 under the Seop 3 program, which resulted in 5,315 (4,397) matching shares, equivalent to SEK 1,143,000 (725,000). An estimated 122,252 (101,134) performance shares may be allocated, at a value of SEK 26,296,000 (16,667,000), since the Outperform targets were preliminarily 100 (100) percent fulfilled. The stated value refers to the share price on December 30, 2016 (SEK 215.1). Variable remuneration and the outcome of performance shares for 2016 are preliminary. The final outcome will be established in the first quarter of 2017 after a review of operational performance. Disbursement of the cash-based variable remuneration normally occurs in May of the year following the performance year.

All above-mentioned remuneration and benefits were charged to Skanska AB, except for SEK 31,157,000 (27,524,000) to other SET members, which was charged to other Group companies.

Pension obligations to current and former senior executives

In 2016, outstanding pension obligations to Presidents and CEOs, including former Presidents and CEOs, amounted to SEK 149,947,000 (180,260,000). Outstanding obligations to other current and former members of the Senior Executive Team amounted to SEK 112,085,000 (112,049,000).

Long-term share programs

Share incentive program – Skanska employee ownership program, Seop 3 (2014–2016)

In 2013, the Annual General Meeting approved the introduction of the Seop 3 long-term share ownership program for employees of the Skanska Group, which is essentially an extension of the earlier Seop 2 share ownership program that ran from 2011 to 2013. The terms and conditions are the same in all material respects as those of the earlier Seop 2 program.

The program is aimed at about 40,000 permanent employees of the Skanska Group, of whom some 2,000 are key employees and about 300 are executives, including the President and CEO and the rest of the Senior Executive Team.

The program offers employees, key employees and executives the opportunity – provided they have made their own investment in Series B Skanska shares during a given financial year – to receive Series B Skanska shares from Skanska free of charge. For each four Series B investment shares purchased, the employee will be entitled, after a three-year lock-up period, to receive one Series B Skanska share free of charge. In addition, after the lock-up period, the employee will be able to receive additional Series B Skanska shares free of charge, contingent upon the fulfillment of certain earnings-based performance criteria during the purchase period.

The purchase period covers the years 2014–2016 and the lock-up period runs for three years from the month in which the investment shares are acquired. For each four investment shares purchased, employees may, in addition to one matching share, receive a maximum of three performance shares. For each four investment shares, key employees may, in addition to one matching share, receive a maximum of seven performance shares. For each four so-called investment shares, executives (split into three subcategories) may, in addition to one matching share, receive a maximum of 15, 19 or 23 performance shares respectively. The maximum number of investment shares that each employee participating in the program may acquire, through monthly saving, depends on the employee's salary and whether an employee is participating in the program as an employee, a key employee or an executive.

Note 37. Continued

Financial targets for the employee ownership program, Seop 3, 2016¹

	Measure of earnings	Starting Point	Outperform	Outcome	Percentage fulfilled ²
Group	Earnings per share, SEK ³	10.8	12.3	15.9	100%
Construction	Operating income, SEK bn	3.7	4.8	3.5	54%
Residential Development*	Operating income, SEK bn	0.8	1.0	1.6	100%
Commercial Property Development	Operating income, SEK bn	1.2	1.6	2.3	94%
	Leasing, thousands of sq m	181	333	317	69%
Infrastructure Development	Operating income, SEK bn	0.7	0.8	1.8	100%
	Project development, %	0	100	72	72%

1 For further information, see the table "Financial targets for variable salary elements" in Note 37 on page 138.

2 Percentage fulfilled is based on outcomes in the respective Business Units, which are weighed together.

3 Profit for the period attributable to shareholders, divided by the average number of outstanding shares during the year.

4 The units for housing development in Central Europe, as well as BoKlok are also measured on return on capital employed. Rental properties are also measured according to the number of units started.

To qualify to receive matching and performance shares, a participant must be employed within the Skanska Group throughout the lock-up period and must have retained his or her investment shares during this period.

The program has two cost ceilings. The first ceiling depends on the extent to which financial "Seop-specific Outperform targets" are met, which limits Skanska's total cost per year to SEK 208–655 M, related to fulfillment of the financial "Seop-specific Outperform targets" at the Group level. The first cost ceiling is adjusted in accordance with the Consumer Price Index, with 2013 as the base year for Seop 3. The other cost ceiling is that Skanska's total cost per year may not exceed 15 percent of earnings before interest and taxes (EBIT) at the Group level. The actual cost ceiling will be the lower of these two cost ceilings. The cost for the outcomes of stock purchase programs from previous years is included in annually established earnings goals. In addition to the cost ceilings, the number of shares that may be repurchased as part of the three-year program is also limited to 13,500,000 shares.

The table above shows Seop 3 target fulfillment in 2016 for each business stream.

In the Skanska Group, a total of 30 (27) percent of permanent employees participated in Seop 3 in 2016.

Excluding social insurance contributions, the cost of Seop 3 is estimated at around SEK 873 M, of which the cost for 2016 amounts to around SEK 239 M. The remaining cost of Seop 3 up to and including 2019 is estimated at about SEK 453 M.

The dilution effect through 2016 in respect of Seop 3 for the 2016 program is estimated at 2,567,457 shares or 0.55 percent of the number of Skanska Series B shares outstanding. Maximum dilution for the program in 2016 is projected at 5,090,778 shares or 1.23 percent.

The number of issued shares will not change; instead the matching and performance shares will be allocated from repurchased shares. Repurchasing will be evenly distributed over time. There will therefore be essentially no dilution effect.

Share incentive program – Skanska employee ownership program, Seop 4 (2017–2019)

In 2016, the Annual General Meeting approved the introduction of the Seop 4 long-term share ownership program for employees of the Skanska Group, which is essentially an extension of the earlier Seop 3 share ownership program that ran from 2014–2016. The terms and conditions are the same in all material respects as those of the earlier Seop 3 program.

Previous long-term share programs

Share incentive program – Skanska employee ownership program, Seop 2 (2011–2013)

For the previous Skanska employee ownership program, which ran from 2011 to 2013, the distribution of shares was implemented in 2014, 2015 and 2016. This related to shares that were earned in 2011, 2012 and 2013, which, after a three-year lock-up period, were distributed to those who had been employed by the Group throughout the lock-up period and who had retained their investment shares during this lock-up period.

Excluding social insurance contributions, the cost of Seop 2 totaled SEK 794 M, of which SEK 761 M was expensed in 2011–2015, while the costs for 2016 amounted to about SEK 33 M.

Local incentive programs

Salaries and other remuneration are established with reference to prevailing conditions in the rest of the construction industry and customary practices in each local market. The Skanska Group applies a remuneration model for the affected executives and managers that consists of a fixed annual salary plus variable remuneration based on financial targets achieved.

Note 38. Fees and other remuneration to auditors

	Ernst & Young		KPMG	
	2016	2015	2016	2015
Audit assignments	46	0	8	52
Tax advisory services	3	0	1	6
Other services	1	0	2	8
Total	50	0	11	66

For the Parent Company, fees for audit assignments during the year amounted to SEK 5 M and for tax advisory services SEK 1 M.

"Audit assignments" refers to the statutory audit of the annual accounts and accounting documents as well as the administration of the company by the Board of Directors and the President and CEO, as well as audit and other review work conducted according to agreements or contracts. This includes other tasks that are incumbent upon the company's auditors as well as advisory services or other assistance required as a result of observations made during such review work or the completion of such other tasks.

"Other services" refers to advisory services relating to accounting issues, advisory services concerning the divestment and acquisition of businesses and advisory services relating to processes and internal control.

Note 39. Related party disclosures

Skanska sells administrative services to pension funds that manage assets intended to cover the Group's pension obligations.

Associated companies and joint ventures are companies related to Skanska.

Information on transactions with these is presented in the following tables.

Information on remuneration and transactions with senior executives is found in Note 36 Personnel, and Note 37 Remuneration to senior executives and Board members.

Transactions with joint ventures	2016	2015
Sales to joint ventures	7,310	6,381
Purchases from joint ventures	57	64
Dividends from joint ventures	358	548
Receivables from joint ventures	532	552
Liabilities to joint ventures	10	0
Contingent liabilities for joint ventures	1,379	1,890

Transactions with associated companies	2016	2015
Purchases from associated companies	0	0
Receivables from associated companies	0	0
Liabilities to associated companies	0	0

LE Lundbergföretagen AB group has assigned Skanska to undertake four construction contracts for a total order backlog of SEK 465 M (556). Sales in 2016 amounted to SEK 91 M (12).

Skanska's pension fund directly owns 370,000 (370,000) Series B shares in Skanska. There is also an insignificant percentage of indirectly owned shares via investments in various mutual funds.

In 2016 Skanska Tream Allmän Pensionsstiftelse (Skanska's Swedish pension fund) acquired for around SEK 40 M a property in Luleå with other three external funds. The total consideration was around SEK 160 M.

In 2015, Skanska sold its holding in Capital Hospitals (Holdings) Ltd to Skanska Trean Allmän Pensionsstiftelse (Skanska's Swedish pension fund), Skanska Norge Konsernpensjonskass and Skanska Construction Services Trustee Ltd (Skanska UK's pension fund) for SEK 1,031 M.

Note 40. Leases

Skanska is a lessee in both finance and operating leases.

When Skanska is a lessee, finance lease assets are recognized as a non-current asset in the statement of financial position, while the future obligation to the lessor is recognized as a liability in the statement of financial position.

Skanska is not a financial lessor.

As an operating lessor, Skanska leases properties to tenants mainly via its Commercial Property Development business stream.

A. Skanska as a lessee

Finance leases

Leased property, plant and equipment including buildings and land ("Property") as well as machinery and equipment ("Plant and equipment") are recognized in the consolidated financial statements as finance leases.

Of the amount in the statement of financial position for finance leases, most relates to car leases in Sweden. Agreements with lease companies in other countries are operating leases.

Financial leases, carrying amount	2016	2015
Property, plant and equipment		
Property (buildings and land)	0	0
Plant and equipment	266	297
Total	266	297
Acquisition cost	1,098	1058
Depreciation for the year	-80	-83
Accumulated depreciation, January 1	-752	-678
Carrying amount	266	297

Variable fees for finance leases included in 2016 income amounted to SEK 0 M (0). No property leased to Skanska has been subleased to others.

Future minimum lease payments and their present value are presented in the following table.

Expenses, due date	Future minimum lease payments		Present value of future minimum lease payments	
	2016	2015	2016	2015
Within one year	-50	-109	-38	-101
Later than one year but within five years	-196	-186	-152	-171
Later than five years	0	0	0	0
Total	-246	-295	-190	-272
Reconciliation, future minimum lease payments and their present value			2016	2015
Future minimum lease payments			-246	-295
Less interest charges			56	23
Present value of future minimum lease payments			-190	-272

Operating leases

Most of the amounts for future minimum lease payments are related to leased cars and office space in the UK, Poland and the U.S. Also included are site leasehold agreements for land, especially in the UK.

The Group's lease expenses related to operating leases in 2016 totaled SEK -638 M (-554), of which SEK -615 M (-512) relates to minimum lease payments and SEK -23 M (-42) to variable payments. The Group had SEK 13 M (11) in lease income related to subleasing of operating leases.

The due dates of future minimum lease payments for non-cancellable operating leases break down as follows:

Expenses, due date	2016	2015
Within one year	-532	-541
Later than one year but within five years	-1,256	-1,321
Later than five years	-2,119	-1,097
Total	-3,907	-2,959

Of this amount, SEK 53 M (12) relates to properties that were subleased.

B. Skanska as a lessor

Finance leases

Skanska is not a financial lessor.

Operating leases

Operating leases in the form of property leases mainly entered into by the Commercial Property Development business stream.

These properties are recognized as current assets in the statement of financial position. See Note 4 Operating segments.

Lease income for Commercial Property Development in 2016 amounted to SEK 571 M (515).

The Group's variable lease income related to operating leases amounted to SEK 139 M (0) during the year.

The due dates of future minimum lease payments for non-cancellable operating leases break down as follows:

Revenue, due date	2016	2015
Within one year	425	93
Later than one year but within five years	632	68
Later than five years	674	309
Total	1,731	470

Carrying amount for current-asset properties in Commercial Property Development amounted to SEK 19,728 M (16,650).

5 For definitions, refer to Note 44.

6 Refers to Construction.

7 Proposed by the Board of Directors: Regular dividend of SEK 8.25 per share.

Note 44. A Definitions

Average capital employed	Calculated on the basis of five measuring points: half of capital employed on January 1 plus capital employed at the end of the first, second and third quarters plus half of capital employed at year-end, divided by four.
Average visible equity	Calculated on the basis of five measurement points: half of equity attributable to equity holders on January 1 plus equity attributable to equity holders at the end of the first, second and third quarters plus half of equity attributable to equity holders at year-end, divided by four.
Capital employed in business streams, markets and Business Units/reporting units	Total assets less tax assets and deposits in Skanska's treasury unit minus non-interest-bearing liabilities excluding tax liabilities. Capitalized interest expense is removed from total assets for the Residential Development and Commercial Property Development segments.
Cash flow per share	Cash flow before change in interest-bearing receivables and liabilities divided by the average number of shares outstanding.
Comprehensive income	Change in equity not attributable to transactions with owners.
Consolidated capital employed	Total assets minus non-interest-bearing liabilities.
Consolidated operating cash flow	In the consolidated operating cash flow statement, which includes taxes paid, investments are recognized both in cash flow from business operations and in cash flow from strategic investments. See also Note 35.
Consolidated return on capital employed	Operating income plus financial income as a percentage of average capital employed.
Debt/equity ratio	Interest-bearing net liabilities divided by visible equity including non-controlling interests.
Earnings per share	Profit for the period attributable to equity holders divided by the average number of shares outstanding.
Earnings per share after dilution	Profit for the year attributable to equity holders divided by the average number of shares outstanding after dilution.
Equity/assets ratio	Equity including non-controlling interests as a percentage of total assets.
Equity per share	Visible equity attributable to equity holders divided by the number of shares outstanding at year-end.
Interest-bearing net receivables/net debt	Interest-bearing assets minus interest-bearing liabilities.
Interest cover	Operating income and financial income plus depreciation/amortization divided by net interest items.
Negative/free working capital	Non-interest-bearing receivables less non-interest-bearing liabilities excluding taxes.
Operating cash flow	Cash flow from operations before taxes and before financial activities. See also Note 35.
Operating financial assets/liabilities net	Interest-bearing net receivables/liabilities excluding construction loans to cooperative housing associations and interest-bearing pension liabilities.
Order backlog	Contracting assignments: The difference between order bookings for the period and accrued revenue (accrued project costs plus accrued project income adjusted for loss provisions) plus order backlog at the beginning of the period. Services: The difference between order bookings and accrued revenue plus order backlog.
Order bookings	Contracting assignments: Upon written order confirmation or signed contract, where financing has been arranged and construction is expected to begin within 12 months. If a previously received order is canceled in a subsequent quarter, the cancellation is recognized as a negative item when reporting order bookings for the quarter when the cancellation occurs. Reported order bookings also include orders from Residential Development and Commercial Property Development, which assumes that a building permit has been obtained and construction is expected to begin within three months. Services: For fixed-price assignments, upon signing of contract. For cost-plus assignments, order bookings coincide with revenue. For service agreements, a maximum of 24 months of future revenue is included. No order bookings are reported in Residential Development and Commercial Property Development.
Other comprehensive income	Comprehensive income minus profit according to the income statement. The item includes translation differences, hedging of exchange-rate risk in foreign operations, remeasurements of defined-benefit pension plans, effects of cash flow hedges and tax attributable to other comprehensive income.
Return on equity	Profit attributable to equity holders as a percentage of average visible equity attributable to equity holders.
Return on equity, segments	Revenue according to segment reporting attributable to equity holders as a percentage of average visible equity attributable to equity holders.
Return on capital employed, business streams, markets and business/reporting units	Operating income, financial income minus interest income from Skanska's treasury unit (internal bank) and other financial items as a percentage of average capital employed. For the Residential Development and Commercial Property Development segments, capitalized interest expense is removed from operating income so that the return reflects the return before mortgages.
Return on capital employed in project development units, segments	Operating income, financial income minus interest income from Skanska's treasury unit (internal bank) and other financial items as a percentage of average capital employed. For the Residential Development and Commercial Property Development segments, capitalized interest expense is removed from operating income so that the return reflects the return before mortgages. For Commercial Property Development and Infrastructure Development, the profit is adjusted so that the change in value of projects in progress is added and the difference between the market value and selling price for the year is added.

Note 44 B.

Definitions – Non-IFRS key performance indicators

Non-IFRS key performance indicators	Definition	Reason for use
Adjusted equity attributable to equity holders, SEK bn	Equity attributable to equity holders Unrealized surplus value in land in Residential Development Unrealized development gain in Commercial Property Development Effect on unrealized equity in Infrastructure Development Less standard tax of 10% <hr/> Adjusted equity	The following key performance indicators are used because they are deemed to optimally and correctly show Skanska's operations reflected in the business model and strategy. They also help investors and management to analyze trends and results for Skanska. 27.4 Measures financial position adjusted for potential future development gains in development units after tax. 1.0
Average capital employed	Calculated on the basis of five measuring points, see below.	
Average free working capital in Construction operations, SEK M	Calculated on the basis of five measuring points. Q4 2016 -22,460 x 0.5 -11,230 Q3 2016 -18,943 -18,943 Q2 2016 -17,708 -17,708 Q1 2016 -18,819 -18,819 Q4 2015 -20,542 x 0.5 -10,271 <hr/> -76,971 / 4 -19,243	Measures financial capacity generated from negative working capital in Construction.
Average equity attributable to equity holders, SEK M	Calculated on the basis of five measuring points. Q4 2016 27,350 x 0.5 13,675 Q3 2016 21,069 21,069 Q2 2016 21,794 21,794 Q1 2016 23,368 23,368 Q4 2015 24,079 x 0.5 12,040 <hr/> 91,946 / 4 22,986	
Capital employed, business streams, markets and business/reporting units.	Total assets less tax assets, receivables from Skanska's internal bank and pension receivables minus non-interest-bearing liabilities, excluding tax liabilities. For Residential Development and Commercial Property Development, capitalized interest expense is also deducted from total assets.	Measures capital use and efficiency in business streams.
Capital employed Commercial Property Development, SEK M	Total assets 22,491 - tax assets -422 - receivables from internal bank -1 - pension receivables 0 - non-interest-bearing liabilities (excluding tax liabilities) -1,955 - capitalized interest expense -177 <hr/> 19,936	Measures capital use and efficiency in Commercial Property Development.
Capital employed Infrastructure Development, SEK M	Total assets 5,874 - tax assets -126 - receivables from internal bank 0 - pension receivables 0 - non-interest-bearing liabilities (excluding tax liabilities) -314 <hr/> 5,434	Measures capital use and efficiency in Infrastructure Development.

Note 44 B. Continued

Non-IFRS key performance indicators Definitions		Reason for use	
Capital employed Residential Development, SEK M	Total assets – tax assets – receivables from internal bank – pension receivables – non–interest–bearing liabilities (excluding tax liabilities) – capitalized interest expense	16,588 –257 –78 –18 –4,560 –68 11,607	Measures capital use and efficiency in Residential Development.
Consolidated capital employed	Total assets minus non-interest-bearing liabilities.	Measures capital use and efficiency.	
Debt/equity ratio	Interest-bearing net liabilities divided by visible equity including non-controlling interests.	Measures debt equity ratio/leverage effect in financial position.	
Earnings per share, segments	Profit for the period, segments attributable to equity holders divided by average number of shares outstanding	Measures earnings per share, segments	
Equity/assets ratio	Equity including non-controlling interests as a percentage of total assets.	Measures financial position.	
Financial items	Net of interest income, pension interest, interest expense, capitalized interest expense, change in market value and other financial items.	Measures net financial activities.	
Free working capital in construction	Non-interest-bearing receivables less non-interest-bearing liabilities excluding taxes.	Measures financial capacity generated from negative working capital in Construction.	
Gross income	Revenue minus the cost of production and management.	Measures income generated by the projects.	
Gross margin	Gross income divided by revenue.	Measures profitability of the projects.	
Income after financial items	Operating income minus net of financial items.	Measures pre-tax profit	
Interest-bearing net receivables/net debt	Interest-bearing assets minus interest-bearing liabilities.	Measures financial position.	
Net divestments/investments	Total investments minus total divestments.	Measures the balance between investments and divestments.	
Net operating financial assets/liabilities (ONFAL)	Interest-bearing net receivables/liabilities excluding construction loans to cooperative housing associations and interest-bearing net pension liabilities.	Measures financial position and investment capacity. The latter is determined in a comparison with ONFAL against limits set by the Board of Directors.	
Operating cash flow from business operations	Cash flow from business operations including taxes paid and cash flow from financing activities.	Measures financial capacity generated from negative working capital in Construction.	
Operating income	Revenue minus the cost of production and management, sales and administrative expenses and income from joint ventures and associated companies.	Measures income in operations.	
Operating income, segments	Revenue minus the cost of production and management, sales and administrative expenses and income from joint ventures and associated companies, according to segment reporting and where Residential Development uses the proportional method for joint ventures.	Measures income in operations in the prevailing market situation.	
Operating income, rolling 12-month basis	Revenue minus the cost of production and management, sales and administrative expenses and income from joint ventures and associated companies, rolling 12-month basis.	Measures income in operations.	
Operating margin	Operating income divided by revenue.	Measures profitability in operations.	
Order bookings in relation to revenue in Construction, rolling 12-month basis.	Order bookings divided by revenue in Construction, rolling 12-month basis.	Measures to what extent new orders replace completed work.	

Note 44 B. Continued

Non-IFRS key performance indicators Definitions		Reason for use	
Return on capital employed in Commercial Property Development segment, rolling 12-month basis, SEK M	For Commercial Property Development earnings are adjusted so that changes in value in ongoing projects and the difference between the market value and selling price in the current year are reflected.	Measures earnings (profitability and capital efficiency) in Commercial Property Development.	
Operating income	2 336		
+/- adjustments according to the above	232		
+ capitalized interest expense	101		
+/- financial income and other financial items	-11		
- interest income from the internal bank	0		
Adjusted earnings	2 658		
Average capital employed ¹	17 992		
Return on capital employed in CPD	14,8%		
1 Average capital employed			
Q4 2016	19,936 x 0.5	9,968	
Q3 2016	18,517	18,517	
Q2 2016	17,144	17,144	
Q1 2016	18,086	18,086	
Q4 2015	16,510 x 0.5	8,255	
	71,969 / 4	17,992	
Return on capital employed in Project Development units, segments	Adjusted operating income (operating income, financial income minus interest income from Skanska's internal bank and other financial items. For the RD and CPD segments, capitalized interest is also deducted from operating income so that the return will reflect the return before mortgages as a percentage of average capital employed. When calculating for ID, financial income is reported less interest income from Skanska's internal bank and other financial items. Average capital employed adjusted for IAS 39 and for tax in projects in the U.S., which are set up as limited liability companies, not subject to tax.	Measures earnings (profitability and capital efficiency) in project development operations.	
Return on capital employed in Project Development units, segments SEK M	Total return on capital employed in Residential Development, Commercial Property Development and Infrastructure Development.	Measures profitability and capital efficiency.	
	Adjusted earnings	Average capital employed	Return on capital employed
Residential Development	1,729	10,139	17.1%
Commercial Property Development	2,658	17,992	14.8%
Infrastructure Development	1,453	3,538	41.1%
	5,840	31,669	18.4%
Revenue, segments	Revenue, segments, is the same as revenue IFRS in all business streams except Residential Development and Commercial Property Development, where revenue is recognized when binding contracts are signed for the sale of homes and properties. In segment reporting Residential Development uses the proportional method for joint ventures, which also impacts revenue segments.	Measures revenue generated in the existing market situation.	

Note 44 B. Continued

Non-IFRS key performance indicators Definitions		Reason for use
Return on capital employed in Residential Development segment, rolling 12-month basis excluding Residential Development in the UK (as these operations have been discontinued), SEK M		Measures earnings (profitability and capital efficiency) in Residential Development.

Non-current receivables in Group companies	253	216
Current receivables in Group companies	15	20
Total financial instruments, assets	268	236
Liabilities		
Non-current liabilities to Group companies	4,918	4,769
Trade accounts payable and current liabilities to Group companies	54	42
Total financial instruments, liabilities	4,972	4,811

The fair value of the Parent Company's financial instruments does not deviate significantly in any case from the carrying amount. All assets belong to the category "Loans and trade accounts receivable." No assets have been carried at fair value through profit or loss. All financial liabilities belong to the category "Carried at amortized cost."

Reconciliation with the balance sheet	2016	2015

Other current liabilities and accrued liabilities	77	80
Total equity and liabilities	11,692	11,675

Impact of financial instruments on the Parent Company income statement

Financial income and expense recognized in financial items	2016	2015
Interest income on receivables	0	1
Interest expense on financial liabilities carried at amortized cost	-75	-64
Total	-75	-63

The Parent Company has no income or expense from financial instruments that are recognized directly in equity.

Risks attributable to financial instruments

The Parent Company holds financial instruments almost exclusively in the form of intra-Group receivables and liabilities. All external management of lending, borrowing, interest and currencies is handled by the Group's treasury unit (internal bank), the subsidiary Skanska Financial Services AB. See also Note 6 to the consolidated financial statements, Financial instruments and financial risk management.

Credit risk

The carrying amount of financial instruments, assets, corresponded to the maximum credit exposure on the closing day. There were no impairment losses on financial instruments as of the closing day.

Note 46. Revenue, Parent Company

The Parent Company's revenue consists mainly of amounts billed to Group companies.

The amount includes SEK 668 M (675) in sales to subsidiaries. For other related party transactions, see Note 63 Related party disclosures.

Note 47. Financial items, Parent Company

	Earnings from holdings in Group companies	Earnings from other financial non-current assets	Interest expenses and similar items	Total
2016				
Dividend paid	3,597			3,597
Interest income		0		0
Interest expense			-75	-75
Total	3,597	0	-75	3,522
2015				
Dividend paid	2,538			2,538
Interest income		1		1
Interest expense			-64	-64
Total	2,538	1	-64	2,475

Dividends

The amount for dividends consists of dividends in accordance with a decision by the Annual General Meeting, SEK 3,500 M (2,500) and Group contributions received, SEK 97 M (38).

Net interest income/expense

Of interest income, SEK 0 M (1) relates to Group companies. Of interest expense, SEK -75 M (-64) relates to Group companies.

Note 48. Income taxes, Parent Company

	2016	2015
Current taxes	0	-1
Deferred tax expenses/income from change in temporary differences	-15	10
Total	-15	9

The Swedish tax rate of 22.0 percent in relation to taxes recognized is explained in the table below.

	2016	2015
Income after financial items	3 444	2 381
Tax at tax rate of 22.0 percent (22.0)	-758	-524
Tax effect of:		
Dividends from subsidiaries	770	550
Other non-deductible expenses	-27	-17
Recognized tax expense/income	-15	9

Non-deductible expenses refers mainly to costs related to pensions and, to a lesser extent, to costs related to the Group's foreign operations.

Deferred tax assets

	2016	2015
Deferred tax assets for employee-related provisions	61	76
Minus deferred tax liabilities for holdings	-1	-1
Total	60	75

Change in deferred taxes in balance sheet

	2016	2015
Deferred tax assets, January 1	75	65
Deferred tax expense/income	-15	10
Deferred tax assets, December 31	60	75

The Parent Company expects to be able to utilize deferred tax assets to offset Group contributions from Swedish operating subsidiaries.

Note 49. Intangible assets, Parent Company

Intangible assets are reported in compliance with IAS 38 Intangible assets.

See Note 1 Accounting and valuation principles.

Amortization of intangible assets for the year according to plan amounts to SEK -1 M (-1) and is included in selling and administrative expenses.

In determining the amortization amount, the Parent Company has paid particular attention to estimated residual value at the end of useful life.

	Intangible assets

Note 51. Financial non-current assets, Parent Company

Holdings and receivables are reported as financial non-current assets. Holdings are allocated between holdings in Group companies and joint arrangements.

See Note 52 Holdings in Group companies and Note 53 Holdings in joint arrangements.

Receivables are allocated between receivables from Group companies, deferred tax assets and other non-current receivables.

Tax assets are described in Note 48 Income taxes. All receivables except deferred tax assets are interest-bearing.

Holdings	Holdings in Group companies		Holdings in joint arrangements		Other non-current holdings of securities	
	2016	2015	2016	2015	2016	2015
Accumulated cost						
January 1	11,049	10,990	2	2	0	0
Share-based payments to employees of subsidiaries ¹	45	59				
Share of income	0	0	0	0		
	11,094	11,049	2	2	0	0
Accumulated impairment losses						
January 1	0	0	0	0	0	0
	0	0	0	0	0	0
Carrying amount, December 31	11,094	11,049	2	2	0	0
Carrying amount, January 1	11,049	10,990	2	2	0	0

¹ Equivalent to the portion of the Group's cost for Seop 2 and Seop 3 related to employees of subsidiaries and recognized in the Parent Company accounts as an increase in the carrying amount of holdings in Group companies and an increase in equity. If a decision is later made requiring a subsidiary to compensate the Parent Company for the value of the shares issued, receivables are transferred to the Group company. The amount for 2016 was thus reduced by SEK 203 M (177).

Receivables	Receivables from Group companies		Other non-current receivables and deferred tax assets	
	2016	2015	2016	2015

Carrying amount, January 1	216	212	228	198

Note 52. Holdings in Group companies, Parent Company

Skanska AB owns shares in two subsidiaries.

The subsidiary Skanska Kraft AB is a holding company that owns the Group's shareholdings in Skanska Group operating companies. Skanska Financial Services AB is the Group's treasury unit (internal bank).

Company	Corp. ID No.	Registered office	No. of shares	Carrying amount	
				2016	2015
Swedish subsidiaries					
Skanska Financial Services AB	556106-3834	Stockholm	500,000	68	68
Skanska Kraft AB	556118-0943	Stockholm	4,000,000	11,026	10,981
Total				11,094	11,049

Both subsidiaries are 100-percent owned by the Parent Company.

Note 53. Holdings in joint arrangements, Parent Company

Holdings in joint arrangements are reported in compliance with IFRS 11 Joint Arrangements. See Note 1 Accounting and valuation principles.

Company	Corp. ID No.	Registered office	Percentage of capital and votes	Carrying amount	
				2016	2015
Swedish joint arrangements					
Sundlink Contractors HB	969620-7134	Malmö	37	2	2
Total				2	2

The company has no operations other than fulfilling guarantee undertakings.

Note 54. Prepaid expenses and accrued income, Parent Company

The Parent Company has prepaid expenses and accrued income of SEK 9 M (10). This amount consists of SEK 2 M (2) in prepaid insurance premiums and SEK 7 M (8) in other accrued receivables.

Note 55. Equity, Parent Company

Restricted and unrestricted equity

According to Swedish law, equity must be allocated between restricted and unrestricted equity. Share capital and the statutory reserve constitute restricted equity.

Unrestricted equity consists of retained earnings and profit for the year.

The equity of the Parent Company was allocated among SEK 1,260 M (1,260) in share capital, SEK 598 M (598) in the statutory reserve, SEK 1,073 M (2,226) in retained earnings and SEK 3,429 M (2,390) in profit for the year.

The Board of Directors proposes a dividend of SEK 8.25 (7.50) per share for the 2016 financial year.

The dividend for the year is expected to amount to SEK 3,377 M (3,075).

No dividend is paid for the Parent Company's holding of Series B shares. The total dividend amount may change by the record date, depending on repurchases of shares and the transfer of Series B shares to participants in Skanska employee ownership programs.

Number of shares

	2016	2015
Average number of shares outstanding		
after repurchases and conversion	409,896,419	411,059,056
after repurchases, conversion and dilution	412,174,095	414,445,854
Total number of shares	419,903,072	419,903,072

The number of shares amounted to 419,903,072 (419,903,072), divided into 19,793,202 (19,859,200) Series A shares and 400,109,870 (400,043,872) Series B shares.

During the year 65,998 (42,155) Series A shares were converted into the same number of Series B shares. 4,345,000 (2,340,000) Series B shares were repurchased. After distribution of 2,616,579 (2,587,591) shares, there were 10,594,644 (8,866,223) Series B treasury shares remaining.

The quota value per share amounts to SEK 3.00 (3.00). All shares are fully paid up.

Each Series A share carries 10 votes and each Series B share carries one vote.

Series B shares are listed on Nasdaq Stockholm.

According to the Articles of Association, Skanska's share capital may not fall below SEK 1,200 M nor exceed SEK 4,800 M.

Note 56. Provisions, Parent Company

Provisions are reported in compliance with IAS 37 Provisions, Contingent Liabilities and Contingent Assets.

See Note 1 Accounting and valuation principles.

	Provisions for pensions and similar obligations		Other provisions	
	2016	2015	2016	2015
January 1	224	203	86	101
Provisions for the year	36	45	95	65
Provisions utilized	-88	-24	-70	-80
December 31	172	224	111	86

"Other provisions" consists of employee-related provisions.

The normal cycle time for "Other provisions" is about one to three years.

Employee-related provisions includes such items as social insurance contributions for share investment programs, bonus programs and obligations to employees.

Note 57. Provisions for pensions and similar obligations, Parent Company

Provisions for pensions are reported in compliance with the Pension Obligations Vesting Act.

Pension liabilities according to the balance sheet

	2016	2015
Interest-bearing pension liabilities ¹	108	168
Other pension obligations	64	56
Total	172	224

1 Liabilities in compliance with the Pension Obligations Vesting Act.

	2016	2015
The company's total pension obligations	946	1 042
Less pension obligations secured through pension funds	-774	-818
Provisions for pensions and similar obligations ¹	172	224

1 Of which SEK 13 M (16) is secured through credit insurance. Other pension obligations are largely secured through pledged endowment policies.

Of the company's total pension obligations SEK 691 M (728) is for ITP plans.

No payments to pensions funds are expected to be made in 2017.

Reconciliation, provisions for pensions

	2016	2015
January 1	168	152
Pension expenses	22	21
Benefits paid	-82	-5
Provisions for pensions according to the balance sheet	108	168

Note 58. Liabilities, Parent Company

Liabilities are allocated between non-current and current liabilities in compliance with IAS 1 Presentation of Financial Statements. See Note 1 Accounting and valuation principles.

Accrued expenses and prepaid income

The Parent Company has accrued expenses and prepaid income of SEK 65 M (69).

This relates to accrued vacation pay of SEK 28 M (28), accrued special payroll tax on pensions of SEK 21 M (22), accrued social insurance contributions of SEK 9 M (9) and other accrued expenses of SEK 7 M (10).

Note 59. Expected recovery period of assets, provisions and liabilities, Parent Company

Equity and liabilities				11,692				11,675

1 In case of amounts expected to be recovered within 12 months, expected annual depreciation/amortization has been recognized.

2 No portion of the amount is expected to be recovered within 12 months.

3 No portion of the amount is expected to be recovered within 12 months, since the lending is considered to be non-current.

4 Intra-Group non-current interest-bearing liabilities are treated as having a maturity of more than five years from the closing day.

Note 60. Assets pledged and contingent liabilities, Parent Company

Assets pledged

Assets pledged by the Parent Company totaled SEK 95 M (153), which relates to assets in the form of non-current receivables. These assets were pledged as collateral for some of the Parent Company's pension obligations.

Contingent liabilities

Contingent liabilities are reported in compliance with IAS 37 Provisions, Contingent Liabilities and Contingent Assets. Note 1 Accounting and valuation principles, section IAS 37, describes the accounting principles.

	2016	2015
Contingent liabilities on behalf of Group companies	131,926	101,700
Other contingent liabilities	30,260	20,843
	162,186	122,543

Of the Parent Company's contingent liabilities on behalf of Group companies, almost SEK 117 billion (87) relates to obligations for construction operations, mainly guarantees provided when Group companies were awarded contracts. The remaining contingent liabilities for Group companies relate to guarantees for borrowing by Group companies from credit institutions, guarantee undertakings in connection with divestment of properties by Group companies, guaranteeing Group company undertakings to supply capital to their joint ventures and guarantees for Group company pension obligations.

Of other contingent liabilities, SEK 21.7 billion (14.0) relates to liability for external entities' portion of ongoing contracting work. Of the remaining SEK 8.5 billion (6.8), SEK 1.5 billion (1.8) is attributable to guarantees provided for financing of joint arrangements in which Group companies are co-owners and SEK 7.0 billion (5.0) is for guarantees in connection with financing of residential projects in Sweden.

The amounts in the table above include the Parent Company's contingent liabilities relating to joint and several liability for trading company undertakings of SEK 1 M (1). The company's contingent liabilities relate entirely to guarantees originating from surety provided or responsibilities as a shareholder in companies.

Note 61. Cash flow statement, Parent Company

Adjustments for items not included in cash flow

	2016	2015
Depreciation/amortization	2	1
Capital gain	-1	0
Cost of Seop, employee ownership programs	25	23
Total	26	24

Taxes paid

Total taxes paid in the Parent Company during the year amount to SEK -1 M (-1).

Information about interest and dividends

	2016	2015
Interest income received during the year	0	1
Interest paid during the year	75	64

Note 62. Personnel, Parent Company

Wages, salaries, other remuneration and social insurance contributions

SEK M	2016		2015	
	Salaries and remuneration	Pension expenses	Salaries and remuneration	Pension expenses
Total salaries and remuneration, Board, President and other senior executives	104.1	19.1	86.8	17.8
of which variable remuneration	34.0		24.0	
Other employees	92.3	103.9	95.9	105.2
Less indemnification from pension fund		-101.0		-102.0
Total	196.4	22.0	182.7	21.0
Social insurance contributions		110.0		93.0
of which pension expenses		22.0		21.0

For disclosures of individual remuneration to each Board member and the President and CEO, see Note 37 Remuneration to senior executives and Board members.

For Board members appointed by the employees, no disclosures are made concerning salaries and remuneration or pensions since they do not receive these in their capacity as Board members. For Board members who were employees of the company prior to the beginning of the financial year, disclosures are made concerning pension obligations in their former role as employees.

In 2016, bonuses paid to the President and CEO and other senior executives amounted to SEK 31.2 M (25.7).

In 2016, an allotment of shares occurred under the employee ownership program, Seop 2. The value of shares allotted amounted to SEK 32.3 M (27.8), of which SEK 19.0 M (13.4) was for Board members, the President and CEO and other senior executives.

The Parent Company's pension expenses are calculated in compliance with the Pension Obligations Vesting Act.

In 2016, Skanska's Swedish pension funds reimbursed Skanska AB in the amount of around SEK 101 M (102).

The company's outstanding pension obligations to Presidents and CEOs, including former Presidents and CEOs, amounted to SEK 146.6 M (182.0). The company's outstanding pension obligations to Executive Vice Presidents, including former Executive Vice Presidents, amounted to SEK 89.2 M (91.6). The cost in 2016 for defined-contribution pension plans was SEK 41.5 M (39.2) excluding indemnification.

Average number of employees

Personnel is calculated as the average number of employees. See Note 1 Accounting and valuation principles.

	2016	of which men	of which women	2015	of which men	of which women

Note 66. Events after the reporting period

There are no material events to report for the Parent Company during the period.

Disclosures in compliance with the Annual Accounts Act, Chapter 6, Section 2 a, Parent Company

Due to the requirements in the Swedish Annual Accounts Act, Chapter 6, Section 2 a, concerning disclosures on certain circumstances that may affect the possibility of a takeover of the company through a public takeover bid for the shares in the company, the following disclosures are hereby provided.

1. The total number of shares in the company on December 31, 2016 was 419,903,072, of which 19,793,202 were Series A shares with 10 votes each and 400,109,870 Series B shares with one vote each.
2. There are no restrictions on the transferability of shares due to provisions in the law or the Articles of Association.
3. Of the company's shareholders, only AB Industriärden and Lundbergs directly or indirectly have a shareholding that represents at least one tenth of the voting power of all shares in the company. On December 31, 2016, AB Industriärden's holding amounted to 23.9 percent of total voting power in the company and Lundbergs' holding 12.3 percent of total voting power in the company.
4. Skanska's pension fund directly owns 370,000 Series B shares in Skanska. There is also an insignificant proportion of indirectly owned shares via investments in various mutual funds.
5. There are no restrictions on the number of votes each shareholder may cast at an Annual General Meeting.
6. The company is not aware of any agreements between shareholders that may result in restrictions on the right to transfer shares.
7. The Articles of Association state that the appointment of Board members is to take place at the Company's Annual General Meeting. The Articles of Association contain no stipulations on dismissal of Board members or on amendments to the Articles of Association.
8. The 2016 Annual General Meeting voted in favor of authorizing the company's Board of Directors to decide on acquisitions of Skanska's Series B treasury shares through a regulated market on the following conditions:
 - A. Skanska Series B shares may only be acquired on Nasdaq Stockholm.
 - B. The authorization may be used on one or more occasions until the 2017 Annual General Meeting.
 - C. A maximum of 4,000,000 Skanska Series B shares may be acquired to secure the allotment of shares to participants in the Skanska employee ownership program, Seop 3 and for subsequent transfer on a regulated market to cover certain costs associated with Seop 3.
 - D. Skanska Series B shares on Nasdaq Stockholm may only be acquired at a price within the applicable price interval at any given time, meaning the interval between the highest purchase price and lowest selling price.
9. Skanska AB or its Group companies are not party to any material agreement that will go into effect, be amended or cease to apply if control over the company or Group companies changes as a consequence of a public takeover bid.
10. There are agreements between Skanska AB or its Group companies and employees that prescribe remuneration if employment is terminated without reasonable grounds. Such remuneration may not exceed 18 months' fixed salary after the end of the notice period or, in the case of the President and CEO, a maximum of 24 months of severance pay. There are no agreements prescribing termination of employment as a consequence of a public takeover bid for the shares in the company.

Note 67. Allocation of earnings

The Board of Directors and the President and CEO propose that the profit for 2016, SEK 3,429,313,185, plus the retained earnings of SEK 1,072,519,186 carried forward from the previous year, totaling SEK 4,501,832,371, be allocated as follows:

A dividend to the shareholders of ¹	8.25 per share	3,376,794,531
To be carried forward		1,125,037,840
Total		4,501,832,371

The consolidated annual accounts and the annual accounts, respectively, have been prepared in compliance with the international accounting standards referred to in Regulation (EC) No. 1606/2002 of the European Parliament and of the Council of July 19, 2002 on the application of IFRS and generally accepted accounting principles, and provide a true and fair view of the position and results of the Group and the Parent Company. The Report of the Directors for the Group and the Parent Company provides a true and fair view of the operations, financial position and results of the Group and the Parent Company, and describes the principal risks and uncertainties facing the Parent Company and the companies included in the Group.

Auditor's report

This is a translation from the Swedish original

To the general meeting of the shareholders of Skanska AB (publ), corporate identity number 556000-4615

Report on the annual accounts and consolidated accounts

Opinions

We have audited the annual accounts and consolidated accounts of Skanska AB (publ) for the year 2016 except for the corporate governance statement on pages 58–64. The annual accounts and consolidated accounts of the company are included on pages 49–163 in this document.

In our opinion, the annual accounts have been prepared in accordance with the Annual Accounts Act and present fairly, in all material respects, the financial position of the parent company as of 31 December 2016 and its financial performance and cash flow for the year then ended in accordance with the Annual Accounts Act. The consolidated accounts have been prepared in accordance with the Annual Accounts Act and present fairly, in all material respects, the financial position of the group as of 31 December 2016 and their financial performance and cash flow for the year then ended in accordance with International Financial Reporting Standards (IFRS), as adopted by the EU, and the Annual Accounts Act. Our opinions do not cover the corporate governance statement on pages 58–64. The statutory administration report is consistent with the other parts of the annual accounts and consolidated accounts.

We therefore recommend that the general meeting of shareholders adopts the income statement and balance sheet for the parent company and the income statement and statement of financial position in the consolidated financial statements.

Basis for Opinions

We conducted our audit in accordance with International Standards on Auditing (ISA) and generally accepted auditing standards in Sweden. Our responsibilities under those standards are further described in the Auditor's Responsibilities section. We are independent of the parent company and the group in accordance with professional ethics for accountants in Sweden and have otherwise fulfilled our ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinions.

Other matters

The audit of the annual accounts for 2015 was performed by another auditor who submitted an auditor's report dated 4 March 2016, with unmodified opinions in the Report on the annual accounts.

Key Audit Matters

Key audit matters of the audit are those matters that, in our professional judgment, were of most significance in our audit of the annual accounts and consolidated accounts of the current period. These matters were addressed in the context of our audit of, and in forming our opinion

thereon, the annual accounts and consolidated accounts as a whole, but we do not provide a separate opinion on these matters.

Initial Audit

Initial audit engagements involve a number of considerations not associated with recurring audits and therefore is a key audit matter Additional planning activities and considerations necessary to establish an appropriate audit strategy and audit plan for an initial audit include: Gaining an initial understanding of the Group and its business including its control environment and information systems, sufficient to make audit risk assessments and develop the audit strategy and plan; Obtaining sufficient appropriate audit evidence regarding the opening balances including the selection and application of accounting principles and Communicating with the previous auditors. We presented our audit plan to the Company's Audit Committee in May 2016, with particular emphasis on initial audit considerations, and we reported key findings from our audit process throughout the year.

Prior to being elected as Company auditors in April 2016, we developed a comprehensive transition plan starting in January 2016 to understand the connection between the Company's business risks and the way this impacts the Company's financial reporting and internal controls framework. Our procedures included for example: Close interaction with the previous auditor, including a process of review of reporting documents and formal hand over procedures as prescribed by our professional standards; active knowledge sharing with the Internal Audit function to understand their perspectives on the business, risks and key findings from their work; attendance of formal clearance meetings with senior management and the Audit Committee during the 2015 year-end financial closing and reporting process; evaluation of key accounting positions and audit matters from prior years; review of management's control documentation to assist in obtaining an understanding of the Company's financial reporting processes.

Percentage-of-completion method

A significant portion of the company's income relating to construction contracts. For 2016 the income from construction contracts amount to SEK 123,095 M. The company applies the percentage-of-completion method i.e. using a forecast of final project results and income is recognized gradually over the course of the project based on the degree of completion. This requires that the project revenues and project expenses can be reliably determined. This in turn requires that the Group has effective, coordinated systems for cost estimating, forecasting and revenue/expense reporting. The system also requires a consistent process to assess the final outcome of the project, including analysis of differences compared with earlier assessment dates. This critical judgment is performed at least once per quarter.

Our audit procedures included, among others, review of material contracts including significant judgements relating to profit recognition and allocation of costs. We have reviewed material contracts to identify penalties due to any delayed milestones in the projects. We also assessed the historical accuracy of management's estimates of the final outcomes of projects and evaluated the adequacy of the Company's disclosures included in Note 9 Construction contracts.

Valuation of Investments in Infrastructure Development

Potential impairment in completed infrastructure projects remaining in a joint venture ownership structure could have significant impact on Skanska's net income. These projects are normally very large, the investment cycle is long with the expected cash flows from investments in a number of cases extending beyond 20 to 30 years into the future. The Valuation of Investments in Infrastructure Development is therefore a key audit matter.

The Investments in Infrastructure Development amounts to SEK 2,701 M as of December 31, 2016. As outlined in Note 20 B "Investments in joint ventures and associated companies" of the Annual Report the company determines an estimated value for infrastructure projects by discounting estimated future cash flows in the form of dividends and repayments of loans and equity. The discount rate chosen is applied to all future cash flows starting on the appraisal date.

Our audit procedures included among others assessing budgets and financial projections and reviewing other financial input used to determine the value in use models. We have also – as applicable - audited work performed by external appraisers. We specifically focused on the sensitivity in the difference between the estimated value and book values of the projects, where a reasonably possible change in assumptions could cause the carrying amount to exceed its estimated present value. We also assessed the historical accuracy of management's estimates. We evaluated the adequacy of the Company's disclosures included in Note 20 B.

Claims and litigations

The non-current provision for legal disputes amounts to SEK 950 M as of December 31, 2016. As outlined in Note 29 "Provisions" of the Annual Report, the Company is exposed to potential claims and disputes in the Construction business stream for projects that have been completed. Claims and disputes including any provisions are a key audit matter to our audit because management judgement is required. The assessment process is complex and entails assessing future developments. In addition some of the claims are in countries where the legal proceedings can stretch out over an extended period of time, which further complicates the assessment process.

We gained an understanding of the claims and litigation facing the Company through discussions with in house Legal Counsel. We have read the internal position papers prepared by the Company. We also obtained lawyers' letters to the extent considered necessary for our audit. For all potentially material claims we tested the underlying facts and circumstances considered relevant for the legal advisors to reach their conclusions and assessed the best estimate of outflows as determined by the Company. We also assessed the completeness and adequacy of the related disclosures.

Other Information than the annual accounts and consolidated accounts

This document also contains other information than the annual accounts and consolidated accounts and is found on pages 1-48. The Board of Directors and the Managing Director are responsible for this other information. Our opinion on the annual accounts and consolidated accounts does not cover this other information and we do not express any form of assurance conclusion regarding this other information.

In connection with our audit of the annual accounts and consolidated accounts, our responsibility is to read the information identified above and consider whether the information is materially inconsistent with the annual accounts and consolidated accounts. In this procedure we also take into account our knowledge otherwise obtained in the audit and assess whether the information otherwise appears to be materially misstated.

If we, based on the work performed concerning this information, conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors and the Managing Director

The Board of Directors and the Managing Director are responsible for the preparation of the annual accounts and consolidated accounts and that they give a fair presentation in accordance with the Annual Accounts Act and, concerning the consolidated accounts, in accordance with IFRS as adopted by the EU. The Board of Directors and the Managing Director are also responsible for such internal control as they determine is necessary to enable the preparation of annual accounts and consolidated accounts that are free from material misstatement, whether due to fraud or error.

In preparing the annual accounts and consolidated accounts, The Board of Directors and the Managing Director are responsible for the assessment of the company's and the group's ability to continue as a going concern. They disclose, as applicable, matters related to going concern and using the going concern basis of accounting. The going concern basis of accounting is however not applied if the Board of Directors and the Managing Director intends to liquidate the company, to cease operations, or has no realistic alternative but to do so.

The Audit Committee shall, without prejudice to the Board of Director's responsibilities and tasks in general, among other things oversee the company's financial reporting process.

Auditor's responsibility

Our objectives are to obtain reasonable assurance about whether the annual accounts and consolidated accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinions. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs and generally accepted auditing standards in Sweden will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual accounts and consolidated accounts.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the annual accounts and consolidated accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinions. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of the company's internal control relevant to our audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors and the Managing Director.
- Conclude on the appropriateness of the Board of Directors' and the Managing Director's use of the going concern basis of accounting in preparing the annual accounts and consolidated accounts. We also draw a conclusion, based on the audit evidence obtained, as to whether any material uncertainty exists related to events or conditions that may cast significant doubt on the company's and the group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the annual accounts and consolidated accounts or, if such disclosures are inadequate, to modify our opinion about the annual accounts and consolidated accounts. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause a company and a group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the annual accounts and consolidated accounts, including the disclosures, and whether the annual accounts and consolidated accounts represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient and appropriate audit evidence regarding the financial information of the entities or business activities within the group to express an opinion on the consolidated accounts. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our opinions.

We must inform the Board of Directors of, among other matters, the planned scope and timing of the audit. We must also inform of significant audit findings during our audit, including any significant deficiencies in internal control that we identified.

We must also provide the Board of Directors with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the Board of Directors, we determine those matters that were of most significance in the audit of the annual accounts and consolidated accounts, including the most important assessed risks for material misstatement, and are therefore the key audit matters. We describe these matters in the auditor's report unless law or regulation precludes disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in the auditor's report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on other legal and regulatory requirements

Opinions

In addition to our audit of the annual accounts and consolidated accounts, we have also audited the administration of the Board of Directors and the Managing Director of Skanska AB (publ) for the year 2016 and the proposed appropriations of the company's profit or loss.

We recommend to the general meeting of shareholders that the profit be appropriated in accordance with the proposal in the statutory administration report and that the members of the Board of Directors and the Managing Director be discharged from liability for the financial year.

Basis for Opinions

We conducted the audit in accordance with generally accepted auditing standards in Sweden. Our responsibilities under those standards are further described in the Auditor's Responsibilities section. We are independent of the parent company and the group in accordance with professional ethics for accountants in Sweden and have otherwise fulfilled our ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinions.

Responsibilities of the Board of Directors and the Managing Director

The Board of Directors is responsible for the proposal for appropriations of the company's profit or loss. At the proposal of a dividend, this includes an assessment of whether the dividend is justifiable considering the requirements which the company's and the group's type of operations, size and risks place on the size of the parent company's and the group's equity, consolidation requirements, liquidity and position in general.

The Board of Directors is responsible for the company's organization and the administration of the company's affairs. This includes among other things continuous assessment of the company's and the group's financial situation and ensuring that the company's organization is designed so that the accounting, management of assets and the company's financial affairs otherwise are controlled in a reassuring manner. The Managing Director shall manage the ongoing administration according to the Board of Directors' guidelines and instructions and among other matters take measures that are necessary to fulfill the company's accounting in accordance with law and handle the management of assets in a reassuring manner.

Auditor's responsibility

Our objective concerning the audit of the administration, and thereby our opinion about discharge from liability, is to obtain audit evidence to assess with a reasonable degree of assurance whether any member of the Board of Directors or the Managing Director in any material respect:

- has undertaken any action or been guilty of any omission which can give rise to liability to the company, or
- in any other way has acted in contravention of the Companies Act, the Annual Accounts Act or the Articles of Association.

Our objective concerning the audit of the proposed appropriations of the company's profit or loss, and thereby our opinion about this, is to assess with reasonable degree of assurance whether the proposal is in accordance with the Companies Act.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with generally accepted auditing standards in Sweden will always detect actions or omissions that can give rise to liability to the company, or that the proposed appropriations of the company's profit or loss are not in accordance with the Companies Act.

As part of an audit in accordance with generally accepted auditing standards in Sweden, we exercise professional judgment and maintain professional skepticism throughout the audit. The examination of the administration and the proposed appropriations of the company's profit or loss is based primarily on the audit of the accounts. Additional audit procedures performed are based on our professional judgment with starting point in risk and materiality. This means that we focus the examination on such actions, areas and relationships that are material for the operations and where deviations and violations would have particular importance for the company's situation. We examine and test decisions undertaken, support for decisions, actions taken and other circumstances that are relevant to our opinion concerning discharge from liability. As a basis for our opinion on the Board of Directors' proposed appropriations of the company's profit or loss we examined the Board of Directors' reasoned statement and a selection of supporting evidence in order to be able to assess whether the proposal is in accordance with the Companies Act.

The auditor's examination of the corporate governance statement

The Board of Directors is responsible for that the corporate governance statement on pages 58–64 has been prepared in accordance with the Annual Accounts Act.

Our examination of the corporate governance statement is conducted in accordance with FAR's auditing standard RevU 16. The auditor's examination of the corporate governance statement. This means that our examination of the corporate governance statement is different and substantially less in scope than an audit conducted in accordance with International Standards on Auditing and generally accepted auditing standards in Sweden. We believe that the examination has provided us with sufficient basis for our opinions.

A corporate governance statement has been prepared. Disclosures in accordance with chapter 6 section 6 the second paragraph points 2–6 of the Annual Accounts Act and chapter 7 section 31 the second paragraph the same law are consistent with the other parts of the annual accounts and consolidated accounts and are in accordance with the Annual Accounts Act.

Northern Finland's new hub

Valkea and Pajarinkulma, Oulu, Finland
Residential Development and Construction

This northern Finland city has a new downtown hub, courtesy of Skanska: the Group built the new Valkea enclosed shopping mall, and on top of that developed and constructed the Pajarinkulma residential tower. It is a destination that cannot be missed, as Pajarinkulma stands 12 stories above street level – the tallest building in the city.

"This is a project that residents were waiting for," says Mikko Herva, Skanska Regional Director. "It has become the place where people like to meet."

To deliver this complex project, Skanska joined its expert knowledge of the local residential market and ability to self-finance developments with its construction know-how. Building information modeling (BIM) and mobile technologies were important to the efficient construction process.

Mixed-use city center projects like Valkea/Pajarinkulma are becoming more common in Finland. Skanska is among the few companies in Finland with the resources and expertise that these projects require.

Annual General Meeting Investors

The Annual General Meeting of Skanska AB (publ) will be held at 10:00 a.m. on April 4, 2017 at the Stockholm Waterfront Congress Centre, Nils Ericsons Plan 4, Stockholm, Sweden.

Notification and registration

Shareholders who wish to participate in the Annual General Meeting must be listed in the register of shareholders maintained by Euroclear Sweden AB, the Swedish central securities depository and clearing organization, on Wednesday, March 29, 2017 and must notify Skanska by March 29, 2017, preferably before 12 noon, of their intention to participate in the Meeting.

Shareholders whose shares have been registered in the name of a trustee must have requested re-registration in their own name in the register of shareholders maintained by Euroclear Sweden AB to be entitled to participate in the Meeting. Such re-registration, which may be temporary, should be requested well in advance of Wednesday, March 29, 2017 from the bank or brokerage house holding the shares in trust.

Notification may be made in writing to:

Skanska AB, Group Legal Affairs,
SE-112 74 Stockholm, Sweden
Telephone: +46 8 402 92 81
Website: www.skanska.com

The notification must always state the shareholder's name, personal identification or corporate identity number, address and telephone number. For shareholders represented by proxy, a power of attorney should be sent to the company before the Meeting. Shareholders who have duly notified the company of their participation will receive an admittance card, which should be brought and shown at the entrance to the Meeting venue.

Dividend

The Board's assessment is that the Group's financial position justifies an increased dividend and proposes a dividend of SEK 8,25 (7,50) per share for the 2016 financial year. The dividend is equivalent to a total dividend of SEK 3,377 M (3,075). The Board proposes April 6 as the record date for the dividend. Provided that the Meeting approves this proposal, the dividend is expected to be distributed by Euroclear AB on April 11, 2017.

The total dividend amount may change by the record date, depending on repurchases of shares and transfers of shares to participants in the company's long-term employee ownership programs.

Calendar

The Skanska Group's interim reports will be published on the following dates:

Three Month Report

May 5, 2017

Six Month Report

July 20, 2017
